| 14. ABSTRACT<br>This No Further Action (NFA) Proposed Plan provides the public with information to comment upon the selection of the recommended response action for RVAAP-062-R-01 Water Works #4 Dump Munitions Response Site (MRS) at the former Ravenna Army Ammunition Plant under the Military Munitions Response Program. This NFA Proposed Plan presents the U.S. Army's preliminary recommendations concerning how best to address the Water Works #4 Dump MRS where no munitions and explosives of concern were found that had the potential to originate from historical activities associated with manufacturing, storing, transporting, testing, training, and/or disposal that occurred at the facility. The U.S. Army is issuing this NFA Proposed Plan as part of its public participation responsibilities under Section 117(a) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986 and Section 300.430(f)(2) of the National Oil and Hazardous Substances Pollution Contingency Plan (40 Code of Federal Regulations 300). Implementation of the selected remedy for the MRS will also satisfy the requirements of the Ohio EPA Director's Final Findings and Orders, |  |                         |   |   |                                    |  |

## INSTRUCTIONS FOR COMPLETING SF 298

**1. REPORT DATE.** Full publication date, including day, month, if available. Must cite at least the year and be Year 2000 compliant, e.g. 30-06-1998; xx-06-1998; xx-xx-1998.

**2. REPORT TYPE.** State the type of report, such as final, technical, interim, memorandum, master's thesis, progress, quarterly, research, special, group study, etc.

**3. DATES COVERED.** Indicate the time during which the work was performed and the report was written, e.g., Jun 1997 - Jun 1998; 1-10 Jun 1996; May - Nov 1998; Nov 1998.

**4. TITLE.** Enter title and subtitle with volume number and part number, if applicable. On classified documents, enter the title classification in parentheses.

**5a. CONTRACT NUMBER.** Enter all contract numbers as they appear in the report, e.g. F33615-86-C-5169.

**5b. GRANT NUMBER.** Enter all grant numbers as they appear in the report, e.g. AFOSR-82-1234.

**5c. PROGRAM ELEMENT NUMBER.** Enter all program element numbers as they appear in the report, e.g. 61101A.

**5d. PROJECT NUMBER.** Enter all project numbers as they appear in the report, e.g. 1F665702D1257; ILIR.

**5e. TASK NUMBER.** Enter all task numbers as they appear in the report, e.g. 05; RF0330201; T4112.

**5f. WORK UNIT NUMBER.** Enter all work unit numbers as they appear in the report, e.g. 001; AFAPL30480105.

**6. AUTHOR(S).** Enter name(s) of person(s) responsible for writing the report, performing the research, or credited with the content of the report. The form of entry is the last name, first name, middle initial, and additional qualifiers separated by commas, e.g. Smith, Richard, J, Jr.

**7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES).** Self-explanatory.

**8. PERFORMING ORGANIZATION REPORT NUMBER.** Enter all unique alphanumeric report numbers assigned by the performing organization, e.g. BRL-1234; AFWL-TR-85-4017-Vol-21-PT-2.

**9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES).** Enter the name and address of the organization(s) financially responsible for and monitoring the work.

**10. SPONSOR/MONITOR'S ACRONYM(S).** Enter, if available, e.g. BRL, ARDEC, NADC.

**11. SPONSOR/MONITOR'S REPORT NUMBER(S).** Enter report number as assigned by the sponsoring/monitoring agency, if available, e.g. BRL-TR-829; -215.

**12. DISTRIBUTION/AVAILABILITY STATEMENT.** Use agency-mandated availability statements to indicate the public availability or distribution limitations of the report. If additional limitations/ restrictions or special markings are indicated, follow agency authorization procedures, e.g. RD/FRD, PROPIN, ITAR, etc. Include copyright information.

**13. SUPPLEMENTARY NOTES.** Enter information not included elsewhere such as: prepared in cooperation with; translation of; report supersedes; old edition number, etc.

**14. ABSTRACT.** A brief (approximately 200 words) factual summary of the most significant information.

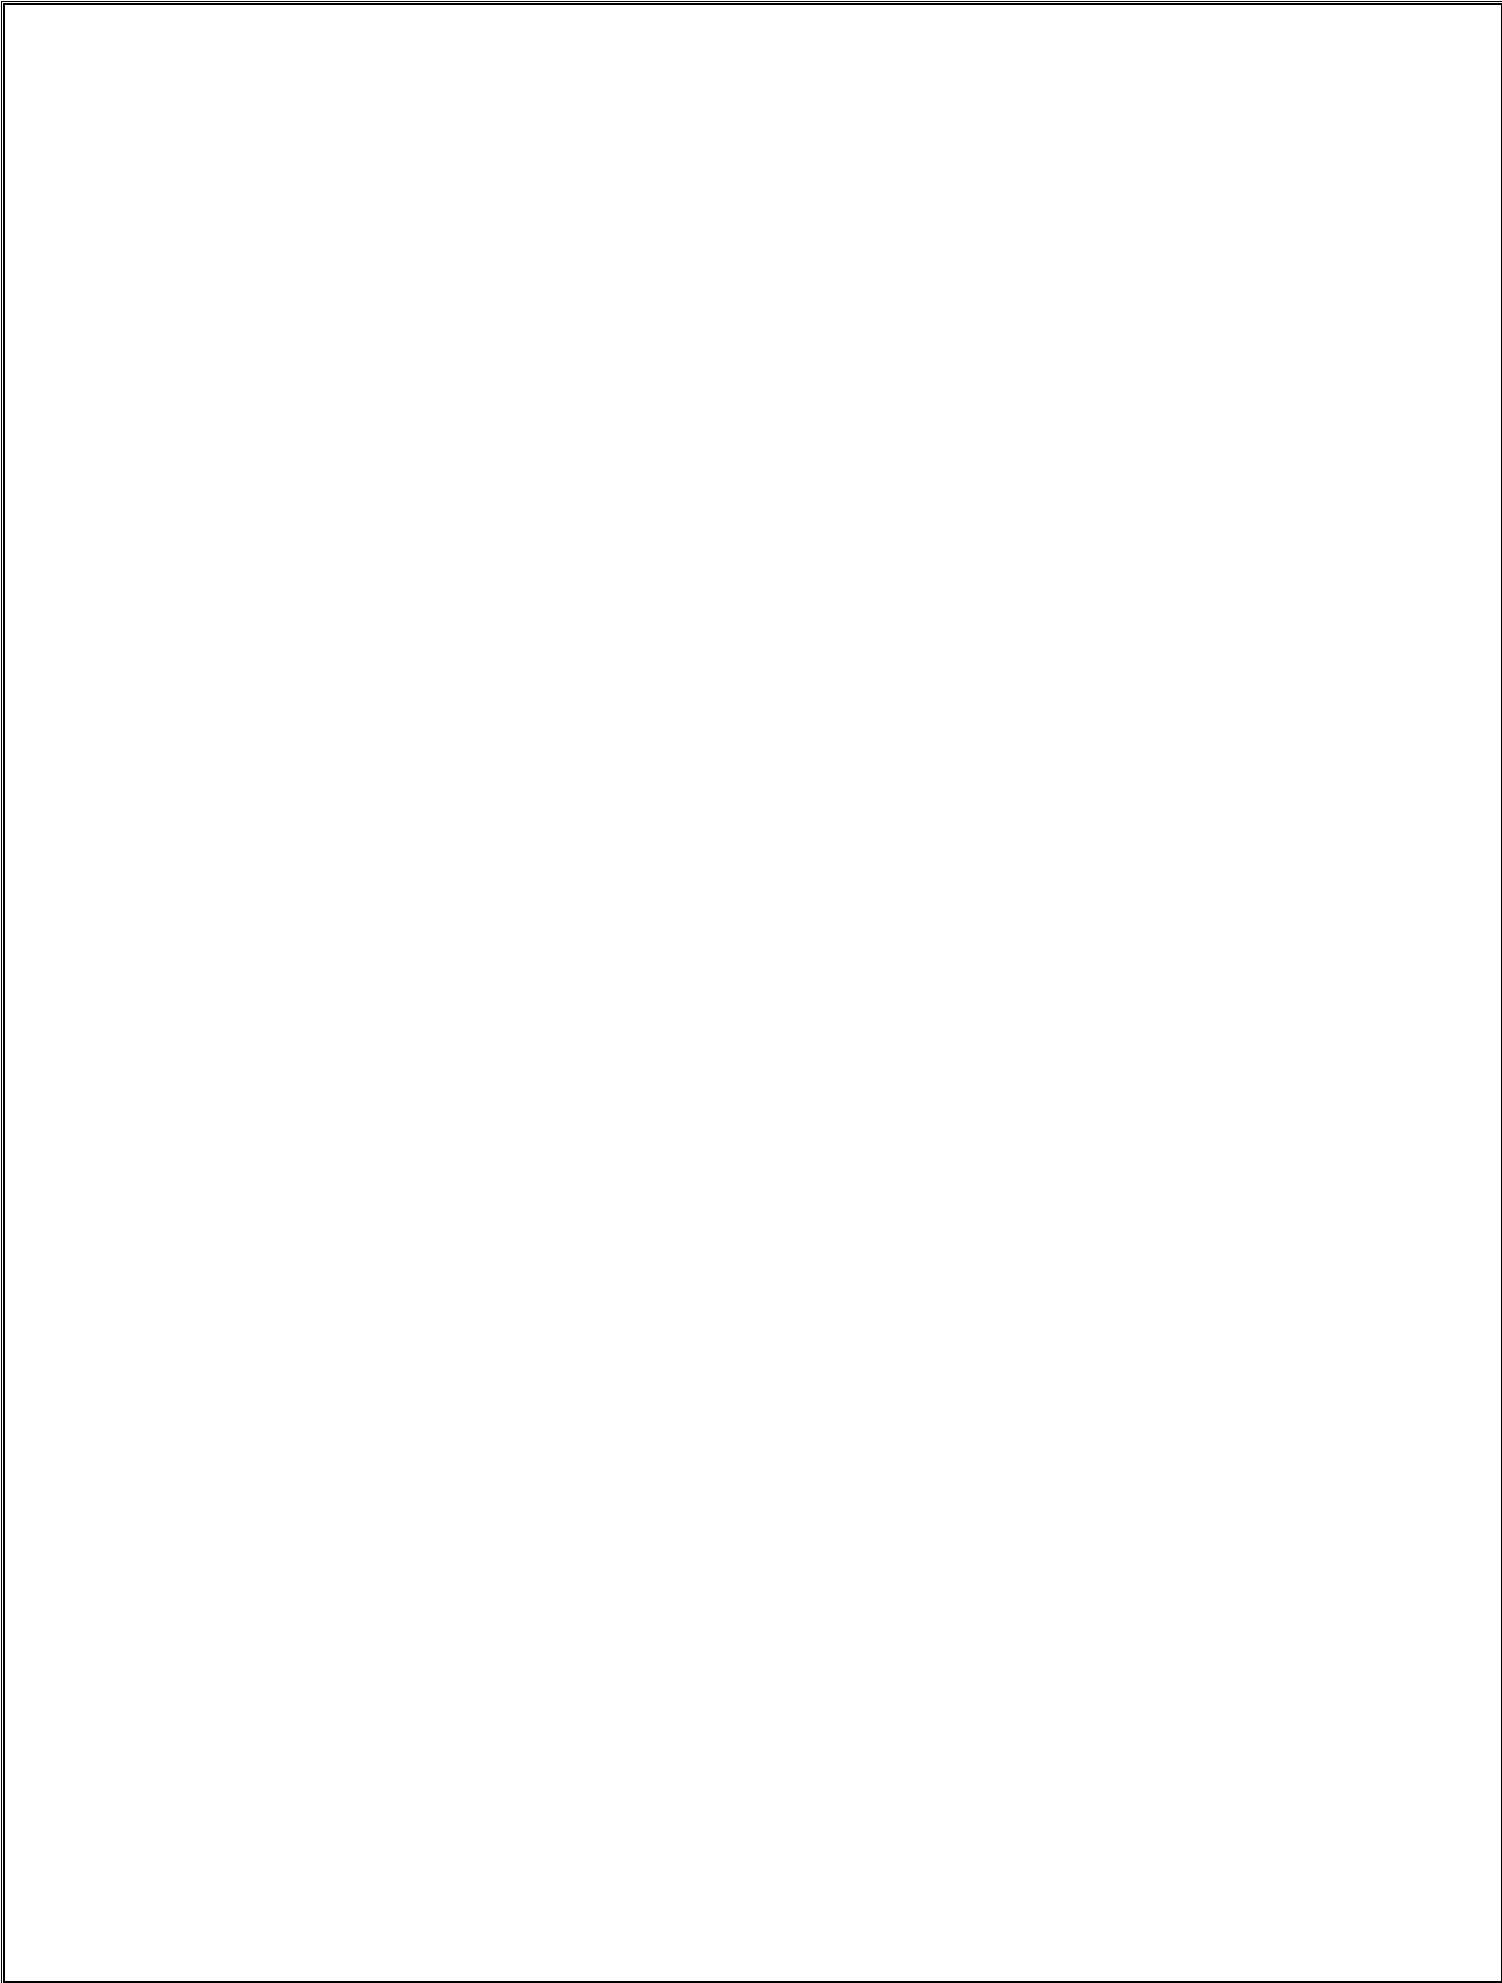

**15. SUBJECT TERMS.** Key words or phrases identifying major concepts in the report.

**16. SECURITY CLASSIFICATION.** Enter security classification in accordance with security classification regulations, e.g. U, C, S, etc. If this form contains classified information, stamp classification level on the top and bottom of this page.

**17. LIMITATION OF ABSTRACT.** This block must be completed to assign a distribution limitation to the abstract. Enter UU (Unclassified Unlimited) or SAR (Same as Report). An entry in this block is necessary if the abstract is to be limited.

## **DISCLAIMER STATEMENT**

This document is a work prepared for the United States Government by CB&I Federal Services LLC. In no event shall either the United States Government or the United States Army Corps of Engineers have any responsibility or liability for any consequences of any use, misuse, inability to use, or reliance on the information contained herein, nor does either warrant or otherwise represent in any way the accuracy, adequacy, efficacy, or applicability of the contents hereof.

## CONTRACTOR'S STATEMENT OF INDEPENDENT TECHNICAL REVIEW

CB&I Federal Services LLC has completed the *Draft No Further Action Proposed Plan for RVAAP-062-R-01 Water Works #4 Dump Munitions Response Site*, Version 1.0, at the former Ravenna Army Ammunition Plant in Portage and Trumbull Counties, Ohio. Notice is hereby given that an independent technical review has been conducted that is appropriate to the level of risk and complexity inherent in the project. During the independent technical review, compliance with established policy, principles, and procedures, utilizing justified and valid assumptions, was verified. This included review of data quality objectives; technical assumptions; methods, procedures, and materials to be used; the appropriateness of data used and level of data obtained; and reasonableness of the results, including whether the product meets customer's needs consistent with law and existing United States Army Corps of Engineers policy.

1

## 2 1.0 INTRODUCTION

3 This *No Further Action Proposed Plan* is  
4 presented by the United States Department of  
5 the Army (U.S. Army) to involve the public in  
6 the remedy selection process for the RVAAP-  
7 062-R01 Water Works #4 Dump Munitions  
8 Response Site (MRS) requiring No Further  
9 Action (NFA) at the former Ravenna Army  
10 Ammunition Plant (RVAAP) in Portage and  
11 Trumbull Counties, Ohio (**Figure 1**). The U.S.  
12 Army, in consultation with the Ohio  
13 Environmental Protection Agency (Ohio EPA),  
14 is the lead agency for investigating, reporting,  
15 making remedial decisions, and taking remedial  
16 actions at the former RVAAP. This NFA  
17 Proposed Plan presents the U.S. Army's  
18 preliminary recommendations concerning how  
19 best to address the Water Works #4 Dump  
20 MRS where no munitions and explosives of  
21 concern (MEC) were found that had the  
22 potential to originate from historical activities  
23 associated with manufacturing, storing,  
24 transporting, testing, training, and/or disposal  
25 that occurred at the facility.

26  
27 This NFA Proposed Plan provides the public  
28 with information to comment upon the  
29 selection of the recommended response action.  
30 The U.S. Army, in consultation with the Ohio  
31 EPA, will review and consider all comments  
32 during the 30-day public comment period.  
33 Therefore, the public is encouraged to review  
34 and comment on all recommendations  
35 presented in this NFA Proposed Plan.

36  
37 The U.S. Army is issuing this NFA Proposed  
38 Plan as part of its public participation  
39 responsibilities under Section 117(a) of the  
40 *Comprehensive Environmental Response,*  
41 *Compensation, and Liability Act of 1980*  
42 (CERCLA), as amended by the *Superfund*  
43 *Amendments and Reauthorization Act of 1986*  
44 and Section 300.430(f)(2) of the *National Oil*  
45 *and Hazardous Substances Pollution*  
46 *Contingency Plan* (40 Code of Federal  
47 Regulations 300). Implementation of the  
48 selected remedy at the MRS will also satisfy

49 the requirements of the *Director's Final*  
50 *Findings and Orders* (Ohio EPA, 2004).

51

52 This NFA Proposed Plan summarizes  
53 information that can be found in greater detail  
54 in the *Final Remedial Investigation Report for*  
55 *RVAAP-062-R-01 Water Works #4 Dump MRS,*  
56 *Version 1.0* (Final RI Report; CB&I Federal  
57 Services LLC [CB&I], 2015). The U.S. Army  
58 encourages the public to review these  
59 documents to gain a more comprehensive  
60 understanding of the MRS and activities that  
61 have been conducted to date at the MRS under  
62 the Military Munitions Response Program  
63 (MMRP).

64

## 65 2.0 FACILITY AND MRS 66 BACKGROUNDS

67 This section presents the descriptions and  
68 background history for the RVAAP and the  
69 Water Works #4 Dump MRS presented in this  
70 NFA Proposed Plan.

### 71 2.1 Facility History

72 The RVAAP (Federal Facility ID No.  
73 OH213820736), now known as the Camp  
74 Ravenna Joint Military Training Center (Camp  
75 Ravenna), is located in northeastern Ohio  
76 within Portage and Trumbull Counties and is  
77 approximately 3 miles east-northeast of the city  
78 of Ravenna. The facility is federally owned and  
79 is approximately 11 miles long and 3.5 miles  
80 wide. The facility is bounded by State Route 5,  
81 the Michael J. Kirwan Reservoir, and the CSX  
82 System Railroad to the south; Garret,  
83 McCormick, and Berry Roads to the west; the  
84 Norfolk Southern Railroad to the north; and  
85 State Route 534 to the east. In addition, the  
86 facility is surrounded by the communities of  
87 Windham, Garrettsville, Newton Falls,  
88 Charlestown, and Wayland (**Figure 1**).

89

90

**Public Comment Period:**

May XX, 2015, to June XX, 2015

**Public Meeting:**

The U.S. Army will hold an open house and public meeting to explain the NFA Proposed Plan. Oral and written comments will also be accepted at the meeting. The open house and public meeting are scheduled for 6:00 p.m., May XX, 2015, at the **LOCATION TBD**.

**Information Repositories:**

Information used in selecting the conclusion is available online for public review at [www.rvaap.org](http://www.rvaap.org) and at the following locations:

**Reed Memorial Library**

167 East Main Street  
Ravenna, Ohio 44266  
(330) 296-2827

**Hours of operation:**

9 a.m.–9 p.m. Monday–Thursday  
9 a.m.–6 p.m. Friday  
9 a.m.–5 p.m. Saturday  
1 p.m.–5 p.m. Sunday

**Newton Falls Public Library**

204 South Canal Street  
Newton Falls, Ohio 44444  
(330) 872-1282

**Hours of operation:**

10 a.m.–8 p.m. Monday–Thursday  
9 a.m.–5 p.m. Friday and Saturday

The **Administrative Record File**, containing information used in selecting the preferred alternative, is available for public review at the following location:

**Camp Ravenna Joint Military Training Center (Camp Ravenna)**

Environmental Office  
1438 State Route 534  
Newton Falls, Ohio 44444  
(330) 872-8003

Note: Access is restricted to Camp Ravenna, but the file can be obtained or viewed with prior notice to Camp Ravenna.

3 Administrative control of the 21,683-acre  
4 facility has been transferred to the U.S.  
5 Property and Fiscal Officer for Ohio and

6 subsequently licensed to the Ohio Army  
7 National Guard (OHARNG) for use as a  
8 training site, Camp Ravenna. The restoration  
9 program involves cleanup of former production  
10 areas across the facility related to former  
11 operations under the RVAAP.

12  
13 The RVAAP was constructed in 1940 and 1941  
14 for depot storage and ammunition  
15 assembly/loading. During operations as an  
16 ammunition plant, the RVAAP was a  
17 government-owned and contractor-operated  
18 industrial facility. Industrial operations at the  
19 facility consisted of 12 munitions assembly  
20 facilities, referred to as “load lines.” Load  
21 Lines 1 through 4 were used to melt and load  
22 2,4,6-trinitrotoluene (TNT) and Composition B  
23 (mixture of TNT and Research Department  
24 Explosive) into large-caliber shells and bombs.  
25 The operations on the load lines produced  
26 explosive dust, spills, and vapors that collected  
27 on the floors and walls of each building.  
28 Periodically, the floors and walls were cleaned  
29 with water and steam. Following cleaning, the  
30 “pink water” waste water, which contained  
31 TNT and Composition B, was collected in  
32 concrete holding tanks, filtered, and pumped  
33 into unlined ditches for transport to earthen  
34 settling ponds. Load Lines 5 through 11 were  
35 used to manufacture fuzes, primers, and  
36 boosters. From 1946 to 1949, Load Line 12  
37 was used to produce ammonium nitrate for  
38 explosives and fertilizers prior to use as a  
39 weapons demilitarization facility.

40  
41 In 1950, the facility was placed in standby  
42 status and operations were limited to  
43 renovation, demilitarization, and normal  
44 maintenance of equipment, along with storage  
45 of munitions. Production activities were  
46 resumed from July 1954 to October 1957 and  
47 again from May 1968 to August 1972. In  
48 addition to production missions, various  
49 demilitarization activities were conducted at  
50 facilities constructed at Load Lines 1, 2, 3, and  
51 12. Demilitarization activities included  
52 disassembly of munitions and explosives melt-  
53 out and recovery operations using hot water

1 and steam processes. Periodic demilitarization  
2 of various munitions continued through 1992.

3  
4 In addition to production and demilitarization  
5 activities at the load lines, other facilities at the  
6 RVAAP include MRSs that were used for the  
7 burning, demolition, and testing of munitions.  
8 These burning and demolition grounds consist  
9 of large parcels of open space or abandoned  
10 quarries. Other areas of concern present at the  
11 facility include landfills, an aircraft fuel tank  
12 testing facility, and various general industrial  
13 support and maintenance facilities [Science  
14 Applications International Corporation, 2011].

## 15 2.2 MRS Background and History

16 The Water Works #4 Dump MRS originally  
17 encompassed 6.15 acres of mostly forested area  
18 that included a small clearing, located  
19 immediately north of the Water Works #4  
20 treatment building and west of Load Line 7 in  
21 the southwestern portion of the facility  
22 (**Figure 2**). The Water Works #4 Dump MRS  
23 was presumably used for the intentional  
24 dumping of nonexplosive metal parts of large-  
25 caliber ordnance rounds. These dumping  
26 activities reportedly occurred from 1941 to  
27 1949. Large-caliber casings were previously  
28 found scattered lying on the ground surface and  
29 partially buried throughout the wooded area  
30 north of the clearing, as were metal parts  
31 identified as ogives from World War I-era 155  
32 millimeter (mm) Mk I shrapnel projectiles  
33 (engineering-environmental Management, Inc.  
34 [e<sup>2</sup>M], 2007). Ogives are the curved or tapered  
35 nose of the 155mm projectile that improved  
36 streamlining (Naval Explosive Ordnance  
37 Disposal Technology Center, 1981).

## 38 2.3 MRS Historical Investigations

39 The following environmental investigations  
40 and reports have been completed for the Water  
41 Works # 4 Dump MRS under the MMRP:

- 42  
43 • *Final Military Munitions Response Program*  
44 *Historical Records Review* (e<sup>2</sup>M, 2007)
- 45 • *Final Site Inspection Report* (SI Report;  
46 e<sup>2</sup>M, 2008)

47 In 2007, a site inspection (SI) was completed at  
48 the Water Works #4 Dump MRS under the  
49 MMRP. The MRS at the time of the SI was  
50 6.15 acres and consisted of a small clearing and  
51 the surrounding wooded area where the large-  
52 caliber casings and projectile ogives were  
53 historically found (**Figure 3**). During the SI  
54 field work, 20 155mm Mk I shrapnel projectile  
55 ogives were found scattered throughout the  
56 northern wooded area of the MRS. Unexploded  
57 ordnance (UXO)-qualified personnel inspected  
58 the ogives and determined that they contained  
59 no energetic material and were inert. The  
60 ogives were classified by the UXO-qualified  
61 personnel as material documented as safe  
62 (MDAS) and were considered to be munitions  
63 debris (MD). Several closely spaced subsurface  
64 anomalies were detected during the SI field  
65 activities in the open field portion of the MRS.

66  
67 A sample for the evaluation of munitions  
68 constituents (MC) was collected in surface soil  
69 from the open field portion of the MRS during  
70 the SI field work and was analyzed for Target  
71 Analyte List metals, propellants, and explosives  
72 using U.S. Environmental Protection Agency  
73 (EPA) Methods 6010C and 8330B. The sample  
74 was compared to the EPA Region 9 Residential  
75 Soil Preliminary Remediation Goals (PRGs),  
76 the screening criteria used at the time of the SI.  
77 Thallium was the only metal detected above  
78 one-tenth the noncarcinogenic PRG at an  
79 estimated (i.e., “B” flagged) concentration of  
80 1.1 milligrams per kilogram; however, thallium  
81 was dismissed as non-munitions related and  
82 was not considered as an MC. No explosives or  
83 propellants were detected in the soil sample.

84  
85 No MEC was found during the SI field work,  
86 and it was recommended in the SI Report  
87 (e<sup>2</sup>M, 2008), and subsequently approved by the  
88 stakeholders, that the MRS footprint be reduced  
89 from 6.15 to 0.77 acres to include only the open  
90 field area of the MRS where subsurface  
91 anomalies were detected. The original MRS  
92 acreage in the SI and the recommended reduced  
93 area (i.e., the current MRS) are presented on  
94 **Figure 3**. Since no MC was identified above  
95 the screening criteria during the SI field work,

1 further characterization of MC was not  
2 recommended for the MRS under the MMRP  
3 (e<sup>2</sup>M, 2008).

#### 4 **2.4 MRS Characteristics**

5 During development of the remedial  
6 investigation (RI) strategy at the Water Works  
7 #4 Dump MRS, the revised MRS boundaries  
8 that were established in the SI Report  
9 (e<sup>2</sup>M, 2008) were reevaluated. Although few  
10 subsurface anomalies were detected during the  
11 SI field work in the wooded areas outside of the  
12 current MRS, the various MD previously  
13 identified on the ground surface in these areas  
14 represented concerns for remaining material  
15 potentially presenting an explosive hazard.  
16 Therefore, the wooded areas where the ogives  
17 were found during the SI were considered to  
18 require further investigation for MEC and the  
19 5.38 acres removed from the MRS during the  
20 SI were reintroduced for further evaluation  
21 under the RI (i.e., the expanded investigation  
22 area) (Shaw Environmental & Infrastructure,  
23 Inc. [Shaw], 2011). **Figure 3** presents the  
24 current MRS boundaries and cultural features  
25 that remain near the Water Works #4 Dump  
26 MRS and the expanded investigation area for  
27 the RI field work. The characteristics of the  
28 MRS and the expanded investigation area are  
29 discussed in this section.

30  
31 The topography at the Water Works #4 Dump  
32 MRS and surrounding area trends  
33 downgradient towards the southeast. The  
34 topography at the 0.77-acre MRS is relatively  
35 flat at approximately 1,150 feet above mean sea  
36 level (amsl). There is an elevation change of  
37 approximately 20 feet within the expanded  
38 investigation area that surrounds the MRS. The  
39 highest elevation is approximately 1,165 feet  
40 amsl at the northwest corner of the expanded  
41 investigation area, and the lowest elevation is  
42 approximately 1,145 amsl at the southeast  
43 corner of the investigation area.

44  
45 The Water Works #4 Dump MRS is located  
46 over the Mercer Member geologic formation,  
47 and the bedrock elevation ranges from 1,100 to

48 1,150 feet amsl (AMEC Earth and  
49 Environmental, Inc. [AMEC], 2008). No  
50 bedrock formations were observed or  
51 encountered at the MRS during the RI;  
52 however, bedrock at the MRS appears to be  
53 relatively shallow, at depths less than 10 feet  
54 below ground surface (bgs) across the MRS  
55 (U.S. Department of Agriculture [USDA]  
56 et al., 1978).

57  
58 Two native soil types, the Mahoning Silt Loam  
59 and the Mitiwanga Silt Loam, are present at the  
60 Water Works #4 Dump MRS and expanded  
61 investigation area. Both soil types have 2 to  
62 6 percent slopes (AMEC, 2008).

63  
64 The Mahoning Silt Loam is the predominant  
65 soil type at the MRS and at the eastern portion  
66 of the expanded investigation area. This soil  
67 type is characterized with medium to rapid  
68 runoff, severe seasonal wetness, and slow  
69 permeability. The average permeability of the  
70 Mahoning Silt Loam with a 2 to 6 percent slope  
71 is  $9.1 \times 10^{-5}$  centimeters per second (cm/s)  
72 (USDA et al., 1978).

73  
74 The Mitiwanga Silt Loam is the predominant  
75 soil type in the expanded investigation area and  
76 a small area at the west side of the MRS. This  
77 is a nearly level soil type in wide, flat areas  
78 such as the MRS and the expanded  
79 investigation area. Permeability is very slow in  
80 the subsoil and underlying glacial till with an  
81 average rate of  $1.04 \times 10^{-7}$  cm/s. Runoff is slow  
82 and ponding is common after heavy rains or  
83 seasonally wet weather (USDA et al., 1978).

84  
85 No groundwater monitoring wells have been  
86 specifically installed for the Water Works #4  
87 Dump MRS. Based on the facility groundwater  
88 data collected for the Facility-Wide  
89 Groundwater Monitoring Program, the  
90 groundwater elevation at the MRS and the  
91 immediate vicinity appears to be at a  
92 potentiometric high at approximately 1,100 feet  
93 amsl. The groundwater appears to flow in all  
94 directions from this higher formation. The  
95 approximate depth to groundwater in the  
96 unconsolidated aquifer at the Water Works #4

1 Dump MRS and the immediate surrounding  
2 area is 50 feet bgs (Environmental Quality  
3 Management, Inc., 2012).

4  
5 The plant communities present at and in the  
6 vicinity of the Water Works #4 Dump MRS  
7 and the expanded investigation area are a  
8 combination of red maple woods and oak-  
9 maple-tulip tree forest classifications  
10 (AMEC, 2008), while the open field consists  
11 mainly of grasses. Vegetation at the current  
12 MRS (open field area) may have been  
13 influenced/disturbed by the former use of the  
14 land as a dumping area.

15  
16 Biological inventories have not occurred  
17 specifically within the MRS boundary,  
18 although no confirmed sightings of federal- or  
19 state-listed species have been reported.  
20 Although there is the potential for federal,  
21 state-listed, or rare species to be within the  
22 MRS boundary, the potential is unlikely due to  
23 the minimal size of the MRS (Camp  
24 Ravenna, 2010).

25  
26 Current activities at the Water Works #4 Dump  
27 MRS include maintenance and natural resource  
28 management activities.

## 29 2.5 Remedial Investigation

30 Between September and December 2011,  
31 CB&I conducted the field work for the RI at  
32 the Water Works #4 Dump MRS. The RI field  
33 work included a Schonstedt-assisted visual  
34 survey at the 0.77-acre MRS as well as the  
35 5.38-acre expanded investigation area and full-  
36 coverage digital geophysical mapping at the  
37 MRS area only.

38  
39 Five ogives were found on the ground surface  
40 at the expanded investigation area during the  
41 Schonstedt-assisted visual survey. Two ogives  
42 were found during the intrusive investigation at  
43 the MRS at a maximum depth of 1 inch bgs.  
44 All of the ogives were classified as MDAS by  
45 the UXO-qualified personnel in the field and  
46 were considered as MD. The remainder of the  
47 anomalies identified during the intrusive

48 investigation was considered to be non-  
49 munitions related or "Other Debris." No MEC  
50 were identified during the Schonstedt-assisted  
51 visual survey or the intrusive investigation at  
52 the MRS.

53  
54 Sampling for MC at the MRS was not proposed  
55 during development of the RI field work unless  
56 MEC or concentrated areas of MD were found  
57 (Shaw, 2011). No MEC was identified at the  
58 Water Works #4 Dump MRS during RI field  
59 activities, and only individual MD consisting of  
60 ogives were found at isolated locations.  
61 Therefore; sampling for MC was not warranted.

62  
63 To date, no MEC has been found at the Water  
64 Works #4 Dump MRS and the only MD  
65 historically found were ogives on the ground  
66 surface or subsurface soil at a maximum depth  
67 of 1 inch bgs. The RI field work confirmed the  
68 results of previous investigations at and outside  
69 the MRS where no MEC has ever been found;  
70 therefore, it is not expected that an explosive  
71 safety hazard would be present at the Water  
72 Works #4 Dump MRS. Based on the results of  
73 the MC sampling during the SI field activities  
74 and the MEC investigation portion of the RI  
75 field activities, it was determined that no  
76 potential source of MC was present at the  
77 Water Works #4 Dump MRS.

## 78 79 3.0 SCOPE AND ROLE OF RESPONSE 80 ACTION

81 The Water Works #4 Dump MRS is federal  
82 property that is licensed to the OHARNG for  
83 future use as a military training site. The  
84 purpose of the RI field work was to evaluate for  
85 the presence of MEC associated with the  
86 historical findings of MD at the MRS and the  
87 expanded investigation area in support of its  
88 intended use. The selected remedy must be  
89 protective of the receptors associated with the  
90 future land use.

91 No explosive safety hazards have ever been  
92 found at the Water Works #4 Dump MRS or  
93 the expanded investigation area during the RI  
94 or previous investigations. Further, since no

1 MEC or concentrated areas of MD have been  
2 identified, there is no potential source of MC.  
3 Therefore, there are no source materials or  
4 impacted environmental media at the MRS or  
5 the expanded investigation area. Further, there  
6 are no nearby surface water features associated  
7 with the MRS.

8 No other investigations are currently ongoing at  
9 the MRS under the MMRP or the Installation  
10 Restoration Program. Although not anticipated,  
11 if any additional hazards are identified at this  
12 MRS that were not found during the RI field  
13 work, then they would be addressed under the  
14 MMRP as a separate response action.

#### 15 16 **4.0 SUMMARY OF HUMAN AND** 17 **ECOLOGICAL RISKS**

18 The overall recommendation of NFA under the  
19 MMRP must be protective of the human and  
20 environmental receptors identified for the  
21 MRS. The planned method for risk evaluation  
22 for explosive safety hazards at an MRS is the  
23 *Interim Munitions and Explosives of Concern*  
24 *Hazard Assessment (MEC HA) Methodology*  
25 (EPA, 2008). In addition to the risk assessment  
26 for MEC, screening-level risk assessments for  
27 both human health and ecological risks were  
28 proposed when environmental media that  
29 represented the potential for MC were  
30 identified and collected (Shaw, 2011). The  
31 evaluation of risk is required to estimate risk  
32 reduction for any response action, including  
33 NFA, and the evaluation and determinations for  
34 risk at the Water Works #4 Dump MRS, as  
35 presented in the Final RI Report (CB&I, 2015),  
36 are discussed in this section.

#### 37 **4.1 MEC Hazard Assessment**

38 The MEC HA (EPA, 2008) addresses human  
39 health and safety concerns associated with  
40 potential exposure to MEC at a MRS under a  
41 variety of site conditions, including various  
42 cleanup scenarios and land use assumptions. If  
43 an explosive hazard is identified, the MEC HA  
44 evaluation will include the information  
45 available for the MRS up to and including the  
46 RI field activities and provide a scoring

47 summary for the current and future land use  
48 activities. If no explosive hazard is found at the  
49 MRS, then there is no need to calculate a MEC  
50 HA score because there are no human health  
51 safety concerns.

52  
53 No MEC representing an explosive safety  
54 hazard at the Water Works #4 Dump MRS  
55 were identified during the RI field activities.  
56 Therefore, calculation of a MEC HA score was  
57 not warranted for the MRS and the MEC  
58 exposure pathways for all receptors at the MRS  
59 are incomplete.

#### 60 **4.2 Human Health and Ecological Risk** 61 **Assessment**

62 The purpose of a human health risk assessment  
63 (HHRA) is to document whether MRS  
64 conditions may pose a risk to current or future  
65 receptors and to identify which, if any, MRS  
66 conditions need to be addressed further in the  
67 CERCLA process. An ecological risk  
68 assessment (ERA) evaluates the potential for  
69 adverse effects posed to ecological receptors  
70 from potential releases at a MRS.

71  
72 Since no MEC or concentrated areas of MD  
73 was identified between the SI and RI field  
74 activities at the Water Works #4 Dump MRS,  
75 media sampling for MC was not warranted.  
76 Therefore, an HHRA or an ERA was not  
77 required to be performed for the MRS and no  
78 risk associated with MC was identified for  
79 human or ecological receptors at the MRS.

#### 80 81 **5.0 CONCLUSIONS AND** 82 **RECOMMENDATIONS**

83 No evidence of MEC or a source of MC was  
84 found at the Water Works #4 Dump MRS  
85 during the RI field work that was conducted  
86 under the MMRP. Based on these results, no  
87 risks associated with exposures to MEC or MC  
88 are present and the U.S. Army, in consultation  
89 with the Ohio EPA, is recommending NFA  
90 under the MMRP for the Water Works #4  
91 Dump MRS. The overall recommendation of  
92 NFA under the MMRP is protective of the  
93 human and environmental receptors identified

1 for the MRS. This recommendation is not a  
2 final decision. The U.S. Army, in consultation  
3 with the Ohio EPA, will select the remedy for  
4 the MRS after reviewing and considering all  
5 comments submitted during the 30-day public  
6 comment period.

## 7 **6.0 COMMUNITY PARTICIPATION**

8 Public participation is an important component  
9 of the remedy selection. The U.S. Army, in  
10 coordination with Ohio EPA, is soliciting input  
11 from the community on the preferred  
12 alternative. The comment period extends from  
13 May XX, 2015, to June XX, 2015. This period  
14 includes a public meeting at which the U.S.  
15 Army will present this NFA Proposed Plan.  
16 The U.S. Army will accept oral and written  
17 comments at this meeting.

### 18 **6.1 Public Comment Period**

19 The 30-day comment period is from May XX,  
20 2015, to June XX, 2015, and provides an  
21 opportunity for public involvement in the  
22 decision-making process for the proposed  
23 action. The public is encouraged to review and  
24 comment on this NFA Proposed Plan. All  
25 public comments will be considered by the U.S.  
26 Army and Ohio EPA before selecting a  
27 remedy. During the comment period, the public  
28 is encouraged to review documents pertinent to  
29 the Water Works #4 Dump MRS. This  
30 information is available at the Information  
31 Repositories and online at [www.rvaap.org](http://www.rvaap.org). To  
32 obtain further information, contact the Camp  
33 Ravenna Environmental Office.

### 34 **6.2 Public Meeting**

35 The U.S. Army will hold an open house and  
36 public meeting on this NFA Proposed Plan on  
37 May XX, 2015, at 6:00 p.m., at LOCATION  
38 TBD to accept comments. This meeting will  
39 provide an opportunity for the public to  
40 comment on the proposed action. Comments  
41 made at the meeting will be transcribed.

### 42 **6.3 Written Comments**

43 If the public would like to comment in writing  
44 on this NFA Proposed Plan or other relevant

45 issues, please deliver comments to the U.S.  
46 Army at the public meeting or mail written  
47 comments (postmarked no later than June XX,  
48 2015).

#### **POINT OF CONTACT FOR WRITTEN COMMENTS**

**Camp Ravenna Environmental Office**  
1438 State Route 534 SW  
Newton Falls, Ohio 44444

### 50 **6.4 U.S. Army Review of Public 51 Comments**

52 The U.S. Army will review the public's  
53 comments as part of the process in reaching a  
54 final decision for the most appropriate action to  
55 be taken. The Responsiveness Summary, a  
56 document that summarizes the U.S. Army's  
57 responses to comments received during the  
58 public comment period, will be included in the  
59 Record of Decision. The U.S. Army's final  
60 choice of action will be documented in the  
61 Record of Decision. The Record of Decision  
62 will be added to the RVAAP Administrative  
63 Record and Information Repositories.

## GLOSSARY OF TERMS

1 **Administrative Record:** This is a collection of  
2 documents, typically reports and  
3 correspondence, generated during site  
4 investigation and remedial activities.  
5 Information in the Administrative Record is  
6 used to select the preferred alternative. It is  
7 available for public review at the Camp  
8 Ravenna Environmental Office; call (330)  
9 872-8003 for an appointment.

10 **Comprehensive Environmental Response,**  
11 **Compensation, and Liability Act of 1980**  
12 **(CERCLA):** This federal law was passed in  
13 1980 and is commonly referred to as the  
14 Superfund Program. It provides for liability,  
15 compensation, cleanup, and emergency  
16 response in connection with the cleanup of  
17 inactive hazardous waste release sites that  
18 endanger public health or the environment.

19 **Complete Pathway:** Complete pathways imply  
20 potential risks or hazards may exist and need  
21 to be addressed by managing the pathway.

22 **Discarded Military Munitions (DMM):**  
23 Military munitions that have been abandoned  
24 without proper disposal or removed from  
25 storage in a military magazine or other  
26 storage area for the purpose of disposal. The  
27 term does not include unexploded ordnance  
28 (UXO), military munitions that are being held  
29 for future use or planned disposal, or military  
30 munitions that have been properly disposed  
31 of consistent with applicable environmental  
32 laws and regulations.

33 **Incomplete Pathway:** No risk or hazard  
34 associated with the pathway. No further data  
35 required to confirm the pathway is  
36 incomplete.

37 **Material Potentially Presenting an Explosive**  
38 **Hazard (MPPEH):** Material potentially  
39 containing explosives or munitions (e.g.,  
40 munitions containers and packaging material;  
41 munitions debris remaining after munitions  
42 use, demilitarization, or disposal; and range-  
43 related debris); or material potentially  
44 containing a high enough concentration of  
45 explosives such that the material presents an  
46 explosive hazard (e.g., equipment, drainage  
47 systems, holding tanks, piping, or ventilation  
48 ducts that were associated with munitions  
49 production, demilitarization, or disposal  
50 operations). Excluded from MPPEH are

51 munitions within the Department of  
52 Defense's established munitions management  
53 system and other hazardous items that may  
54 present explosion hazards (e.g., gasoline  
55 cans, compressed gas cylinders) that are not  
56 munitions and are not intended for use as  
57 munitions.

58 **Military Munitions Response Program**  
59 **(MMRP):** A Department of Defense program  
60 consisting of actions necessary to ensure  
61 protection of human health, welfare, and the  
62 environment from the hazards associated with  
63 MEC and MC at locations impacted by  
64 historical military activities.

65 **Munitions Constituents (MC):** Any material  
66 originating from UXO, DMM, or other  
67 military munitions, including explosive and  
68 nonexplosive materials, and emission,  
69 degradation, or breakdown elements of such  
70 ordnance or munitions.

71 **Munitions Debris (MD):** Remnants of military  
72 munitions (e.g., fragments, penetrators,  
73 projectiles, shell casings, links, fins)  
74 remaining after munitions use,  
75 demilitarization, or disposal.

76 **Munitions and Explosives of Concern**  
77 **(MEC):** A munitions or explosive that may  
78 pose an explosive safety risk because it either  
79 did not function as designed, was discharged  
80 and/or abandoned, or is an explosive  
81 constituent. MEC includes UXO, DMM, and  
82 explosive constituents of munitions present in  
83 high enough concentrations to pose an  
84 explosive hazard.

85 **Munitions Response Site (MRS):** Any area on  
86 a defense site that is known or suspected to  
87 contain MEC or MC.

88 **National Contingency Plan:** The National Oil  
89 and Hazardous Substances Pollution  
90 Contingency Plan. These CERCLA  
91 regulations provide the federal government  
92 the authority to respond to the problems of  
93 abandoned or uncontrolled hazardous waste  
94 disposal sites as well as to certain incidents  
95 involving hazardous wastes (e.g., spills).

96 **Potentially Complete Pathway:** Data needs  
97 determine if the pathway is complete. If the  
98 pathway is determined to be incomplete,  
99 there is no risk or hazard. If the pathway is

## GLOSSARY OF TERMS

1 determined to be complete, a potential risk or  
2 hazard exists.

3 **Proposed Plan (PP):** This CERCLA document  
4 provides the public with information  
5 necessary to participate in the selection of a  
6 remedy. It is designed to solicit public  
7 comment on a preferred alternative before a  
8 ROD is established.

9 **Record of Decision (ROD):** A legal record  
10 signed by the U.S. Army following  
11 coordination and concurrence with the Ohio  
12 EPA as per a June 10, 2004, agreement  
13 between the two parties. It describes the  
14 cleanup action or remedy selected for a site,  
15 the basis for selecting that remedy, public  
16 comments, responses to comments, and the  
17 estimated cost of the remedy.

18 **Remedial Investigation (RI):** A CERCLA  
19 investigation that involves sampling  
20 environmental media, such as air, soil, and  
21 water, to determine the nature and extent of  
22 contamination and to calculate human health  
23 and environmental risks that result from the  
24 contamination.

25 **Responsiveness Summary:** A section of the  
26 ROD where the U.S. Army documents and  
27 responds to written and oral comments  
28 received from the public about the Proposed  
29 Plan.

30 **Unexploded Ordnance (UXO):** Military  
31 munitions that have been primed, fuzed,  
32 armed, or otherwise prepared for action; have  
33 been fired, dropped, launched, projected, or  
34 placed in such a manner as to constitute a  
35 hazard to operations, installations, personnel,  
36 or material; and remain unexploded either by  
37 malfunction, design, or any other cause.
