1 **F.3 PROJECT QUALITY ASSURANCE SUMMARY**

2 **F.3.1 PURPOSE OF THIS REPORT**

3
4 Environmental data must be evaluated relative to their known limitations and intended use. As can be
5 expected in environmental media, some analytical results and data points require the user to be
6 cautioned relative to the quality of the project information presented. The data verification/validation
7 process and this data quality assessment (DQA) are performed to assist current and future data users
8 in interpreting these data.

9
10 The purpose of this DQA report is to document the following:

- 11
- 12 • The quality control (QC) procedures followed to ensure data generated by Leidos, during the
- 13 implementation of the October 2018 sampling event to support the Facility-wide
- 14 Groundwater Monitoring Program (FWGWMP) at the former Ravenna Army Ammunition
- 15 Plant (RVAAP), meet project requirements;
- 16 • The quality of the data collected; and
- 17 • Any problems encountered during the course of the study and their solutions.

18
19 This DQA report provides an assessment of the analytical information generated during the
20 implementation of the *Facility-wide Groundwater Monitoring Addendum for 2018* (TEC-Weston
21 2019; herein referred to as the 2018 Addendum). Implementation of the 2018 Addendum was done so
22 in accordance with the *Remedial Investigation Work Plan for Groundwater and Environmental*
23 *Services for RVAAP-66 Facility-wide Groundwater* (TEC-Weston 2016; herein referred to as the
24 Remedial Investigation Work Plan [RIWP]), Appendix A.2 Quality Assurance Project Plan (QAPP).

25
26 This DQA documents the quality of the data collected during the October 2018 sampling event and
27 assesses if quality assurance (QA)/QC objectives were met. The primary intent of this assessment is
28 to document that, except as noted, data generated for this investigation can withstand scientific
29 scrutiny; are appropriate for their intended purpose; are technically defensible; and are of known and
30 adequate quality (i.e., sensitivity, precision, accuracy, representativeness, comparability, and
31 completeness [PARCC]).

32
33 Multiple activities were performed to achieve the required data quality for this project. Data quality
34 objectives (DQOs) along with a QA program were established to guide the implementation of the
35 field sampling and laboratory analysis per the 2018 Addendum (TEC-Weston 2019). The QA
36 program was established to standardize procedures and document activities per the FWGWMP Plan
37 (Portage Environmental 2004) and RIWP. This program provided a means to detect and correct any
38 deficiencies in the process. Upon receipt by the project team, results provided in the electronic data
39 deliverable (EDD) were subjected to electronic review by an automated data review (ADR) process to
40 identify and qualify problems related to the analysis. This was followed by manual
41 verification/validation of QC results not included in the EDD/ADR review. These combined

1 verification/validation results are summarized in this DQA to document that data used in the remedial
2 investigation (RI) are identified as having met the criteria and are being utilized appropriately.

4 **F.3.2 QUALITY ASSURANCE PROGRAM**

6 The QAPP within the RIWP (TEC-Weston 2016) and field change request (FCR)
7 LEIDOS_FWGW_004 were developed to enumerate the quantity and type of environmental samples
8 needed and to define the quantity and type of QA/QC samples to be used to evaluate data quality.
9 These documents established requirements for field and laboratory QC procedures. In general, field
10 QC duplicate samples were required at a frequency of 10%; volatile organic compound (VOC) trip
11 blanks were to accompany each cooler containing water samples for VOC determinations; field
12 blanks and equipment blanks were collected to demonstrate equipment decontamination and clean
13 ambient field conditions; and analytical laboratory QC samples, including duplicates, matrix spikes
14 (MSs), laboratory control samples (LCSs), and method blanks, were required for each preparation
15 batch of 20 samples or less for each parameter.

17 A primary goal of the QA program is to ensure that the quality of results for all environmental
18 measurements is appropriate for their intended use and that standardized field procedures guide the
19 investigation. Through the process of readiness review, training, equipment calibration, QC
20 implementation, and detailed documentation, the project has successfully accomplished the goals set
21 for the QA program.

23 **F.3.2.1 Monthly Progress Reports**

25 Monthly Progress Reports (MPRs) were completed by the Leidos Project Manager for the duration of
26 the project. The MPRs contained information on work completed, a summary of anticipated
27 upcoming work, discussion of any health and safety issues, and a summary of investigation-derived
28 waste staged at the facility. These reports were issued to the U.S. Army Corps of Engineers (USACE)
29 Louisville District Contracting Officer's Representative and Project Manager by email.

31 **F.3.2.2 Daily Activity Logs**

33 The Field Manager completed Daily Activity Logs. These include information such as, but not
34 limited to, on-site sub-tier contractors, on-site equipment, work performed summaries, QC activities,
35 health and safety activities, problems encountered, and corrective actions.

37 **F.3.2.3 Laboratory "Definitive" Level Data Reporting**

39 The QAPP for this project identified requirements for laboratory data reporting. White Water
40 Associates of Amasa, Michigan, and their subcontracted partner TestAmerica Laboratories, Inc.
41 (TestAmerica) of Denver, Colorado, performed the analysis of the samples. The TestAmerica facility
42 in Denver, Colorado, performed all analyses, except nitroguanidine and nitrocellulose, which were
43 performed at the TestAmerica facility in Sacramento, California, and hexavalent chromium, which
44 was performed at the Test America facility in North Canton, Ohio. TestAmerica Denver and

1 Sacramento are accredited by the U.S. Department of Defense (DoD) for the analyses they performed.
2 Test America in North Canton, Ohio, is not DoD accredited for hexavalent chromium; due to the
3 short holding time associated with this analysis, an FCR (FCR No. 08, June 8, 2017) was sought and
4 approved to use the North Canton laboratory due to its proximity to the site, which eliminated the
5 delay of shipping samples to the laboratory. All analytical procedures were completed in accordance
6 with U.S. Environmental Protection Agency (USEPA) requirements; the DoD Quality Systems
7 Manual (QSM), Version 5.0 (DoD 2017); and the QAPP. USEPA “definitive” data have been
8 reported, including laboratory-level IV data packages meeting QSM Appendix A guidance.

9
10 This information from the laboratory, along with field information, provides the basis for subsequent
11 data evaluation relative to sensitivity and PARCC.

12 13 **F.3.2.4 Field Change Requests**

14
15 Prior to and during the implementation of the October 2018 sampling event, six FCRs were provided
16 and are presented in Appendix H. Of these six FCRs, five were pertinent to the FWGWMP field
17 activities and are briefly described below. LEIDOS_FWGW_005 is not discussed here, as that FCR
18 pertained to the production well abandonment activities. The five pertinent FCRs to the FWGWMP
19 field activities are:

- 20
21 • LEIDOS_FWGW_001 – Specifies that, due to the permanent bladder pumps, total depths of
22 wells will not be collected during the facility-wide comprehensive water level measurements.
- 23 • LEIDOS_FWGW_002 – Provides guidance for evaluation and potential re-collection of wells
24 sampled and analyzed only in the spring of 2018, as specified in the 2018 Addendum.
- 25 • LEIDOS_FWGW_003 – Provided new locations of monitoring wells within the floodplain at
26 the Sand Creek Disposal Road Landfill area of concern (AOC).
- 27 • LEIDOS_FWGW_004 – Specifies the field QC sampling frequency.
- 28 • LEIDOS_FWGW_006 – Documents the micro-purge procedure to be implemented during
29 groundwater sampling collected by micro-purging with dedicated bladder pumps.

30 31 **F.3.3 DATA VERIFICATION/VALIDATION**

32
33 The objective when evaluating the project data quality is to determine its usability. The evaluation is
34 based on the interpretation of laboratory QC measures, field QC measures, and project DQOs. This
35 project implemented ADR software to facilitate laboratory data review. The ADR output was
36 reviewed by the project-designated verification staff, as discussed below.

1 **F.3.3.1 Field Data Verification**

2
3 Field-generated documents, such as sampling logs, boring logs, daily health and safety summaries,
4 daily safety inspections, equipment calibration and maintenance logs, and sample management logs,
5 were peer-reviewed on site.
6

7 **F.3.3.2 Laboratory Data Verification/Validation**

8
9 Analytical data generated for this project have been subjected to a process of automated and manual
10 data verification, validation, and review. Criteria and protocols were established in the following
11 documents:

- 12
- 13 • 2018 Addendum (TEC-Weston 2019);
 - 14 • RIWP, including Appendix A.2 QAPP (TEC-Weston 2016);
 - 15 • DoD QSM, Version 5.0 (DoD 2017);
 - 16 • USEPA *Contract Laboratory Program National Functional Guidelines for Organic Data*
17 *Review*, EPA-540/R-99/008 (USEPA 1999);
 - 18 • USEPA *Contract Laboratory Program National Functional Guidelines for Inorganic Data*
19 *Review*, EPA-540/R-04/004(USEPA 2004); and
 - 20 • Leidos Technical Support Contractor QA Standard Operating Procedure (ESE-DM-05), *Data*
21 *Verification and Validation*.
- 22

23 Upon receipt of analytical data, QA staff performed a systematic examination of 100% of the reports,
24 including ADR outputs. Discrepancies identified during this process were recorded and documented.
25 Any discrepancies were resolved prior to database flag entry. QA Program Nonconformance Report
26 and Corrective Action systems were implemented as required.

27
28 During the verification phase of the review and evaluation process, data were subjected to a
29 systematic technical review by examining all field sample and analytical QC results against the
30 measurement performance criteria (MPC) specified in the QAPP, following USEPA functional
31 guidelines, DoD QSM criteria, and Leidos internal procedures for laboratory data review. These
32 guidelines describe methods for evaluating the review criteria and actions to be taken resulting from
33 the review of these criteria. The primary objectives of this phase were to assess and summarize the
34 quality and reliability of the data for the intended use and to document factors that may affect the
35 usability of the data. This data verification/validation and analytical review process included, but was
36 not necessarily limited to, the following parameters:

- 37
- 38 • Data completeness;
 - 39 • Analytical holding times and sample preservation;
 - 40 • Calibration (initial and continuing);
 - 41 • Method blanks and calibration blanks;
 - 42 • Sample results verification;
 - 43 • Surrogate recovery (organics);
 - 44 • LCS analysis;

- 1 • Internal standard performance;
- 2 • MS/matrix spike duplicate (MSD) recovery;
- 3 • Serial dilution/post digestion spike, interference check standards (inorganics);
- 4 • Field duplicate analysis comparison;
- 5 • Reported detection limits; and
- 6 • Secondary dilutions.

7
8 As a result of this review, data were qualified based on the technical evaluations of QC sample results
9 compared to MPC specified in the QAPP. Qualifiers were applied as needed to field and analytical
10 results to indicate the usability of the data for its intended purpose.

11 12 **F.3.3.3 Definitions of Data Qualifiers (Flags)**

13
14 During the data verification/validation process, laboratory data were assigned appropriate data
15 qualification flags with reason codes. Qualification flags are defined as follows:

- 16
17 • “U” Indicates the analyte was analyzed for, but not detected above, the level of the
18 associated value.
- 19 • “J” Indicates the analyte was positively identified; however, the associated numerical
20 value is an approximate concentration of the analyte in the sample.
- 21 • “UJ” Indicates the analyte was analyzed for, but not detected above, the associated value;
22 however, the reported value is an estimate and demonstrates a decreased knowledge of its
23 accuracy or precision.
- 24 • “R” Indicates the analyte value reported is unusable due to significant noncompliant QC
25 results. No sample results were rejected.

26 27 **F.3.3.4 Data Compliance**

28
29 A total of 92 environmental groundwater samples were collected with approximately 4,689 discrete
30 data points (i.e., analytes) obtained, reviewed, and integrated into the assessment (these totals do not
31 include field measurements, field QC blanks, and field descriptions). During the project, samples
32 were successfully collected and produced usable results for 100% of the sample analyses performed
33 during the October 2018 sampling event. No data were rejected.

34
35 Table F.3-1 summarizes all environmental and QA split samples collected during the October 2018
36 sampling event. Cross-references for field duplicates and field QC samples and the associated
37 primary samples are presented in Table F.3-2 along with the requested parameters for each sample.
38 Table F.3-3 summarizes the qualified analyses grouped by parameter, and Table F.3-4 details the
39 individual results qualified during review. The majority of the estimated values were based on
40 concentrations between the laboratory method detection levels (MDLs) and the sample level of
41 quantitation (LOQ) (i.e., values determined in this region have an inherently higher variability and are
42 considered to be estimated concentrations); qualifiers also were assigned based on noncompliant MS
43 recoveries, surrogate recoveries, holding times, and LCS recoveries, as well as professional judgment.

1 During the October 2018 sampling event, 11 field duplicates were collected and analyzed with
2 primary samples. QA split samples were collected and sent to an independent laboratory (CT
3 Laboratories in Baraboo, Wisconsin); these results were provided directly to USACE and are not
4 included in this DQA. Fourteen trip blanks were collected and analyzed. One equipment rinsate
5 blank, one potable water blank, and one deionized source water blank were collected for the entire
6 field cycle; most samples were collected via the use of dedicated sampling equipment. Therefore, the
7 rinsate blank was only required for groundwater collected from several temporary wells. The project
8 goal for blanks is to achieve concentrations less than the reporting levels. Table F.3-5 summarizes
9 analytes that were detected in these blanks. The deionized water field blank and equipment blank
10 were free from contamination. In general, the field blank and rinsate blank results indicate that the
11 equipment decontamination procedure was effective and the potential for sample contamination due
12 to ambient field conditions is very low.

14 **F.3.4 DATA QUALITY EVALUATION**

16 **F.3.4.1 Volatile Organic Groundwater Analysis**

18 Analytical holding times were not met for 8 VOC samples, which resulted in 288 data points (36% of
19 the VOC data) qualified as estimated “J” or as non-detect at an estimated concentration “UJ.” Initial
20 calibrations and continuing calibration criteria were achieved. Surrogate recoveries and internal area
21 counts were within control limits for all analyses. Method blanks were free from contamination. All
22 LCS and MS/MSD recoveries were within criteria. MS/MSD relative percent difference (RPD) values
23 met control criteria. No samples required dilutions. Two methylene chloride detections were qualified
24 as UJ based on the trip blank results (0.3% of the VOC data). No data were rejected for any reason.
25 Although some analyses were qualified as estimated, the deviations observed should not have a
26 significant impact on the results, and the values are considered technically sound and defensible.
27 Complete data summary tables, with associated qualifiers, are provided in Appendix D and can be
28 found in the RVAP Environmental Information Management System (REIMS).

30 **F.3.4.2 Semi-volatile Organic Groundwater Analysis**

32 Extraction and analytical holding times were met for all samples. Initial and continuing calibration
33 criteria were met. Surrogate recoveries met criteria. Internal standard area counts and compound
34 retention times met criteria throughout the data analyses. Method blanks were free of contamination.
35 All LCS and MS/MSD recoveries were within criteria. MSD RPD values met control criteria. No
36 semi-volatile organic compound (SVOC) samples required dilutions. No data were estimated or
37 rejected for any reason, and the results are considered technically sound and defensible. Complete
38 data summary tables, with associated qualifiers, are provided in Appendix D and can be found in
39 REIMS.

41 **F.3.4.3 Polycyclic Aromatic Hydrocarbon Groundwater Analysis**

43 Extraction and analytical holding times were met for all samples. Initial and continuing calibration
44 criteria were met. Surrogate recoveries were below control limits in 1 sample, resulting in 18 data

1 points that were qualified as “UJ” (5% of the polycyclic aromatic hydrocarbon [PAH] data). Internal
2 standard area counts and compound retention times met criteria throughout the data analyses. Method
3 blanks had low level concentrations of two compounds, which resulted in five results (0.83% of the
4 PAH data) qualified as undetected “U.” LCS recoveries were within control limits. MS/MSD
5 recoveries did not meet criteria for one compound that was qualified as “UJ” in the primary sample
6 (0.28% of the PAH data); RPD values met control criteria. This compound also was qualified in the
7 field duplicate based on professional judgment, since the primary sample was used for the MS/MSD
8 and therefore considered the same matrix. No SVOC samples required dilutions. No data were
9 rejected for any reason. Although several analyses were qualified as estimated, the deviations
10 observed should not have a significant impact on the results, and the values are considered technically
11 sound and defensible. Complete data summary tables, with associated qualifiers, are provided in
12 Appendix D and can be found in REIMS.

13 14 **F.3.4.4 Pesticide Analysis Groundwater Analysis**

15
16 Analytical holding times were met for all samples; as needed, clean-up protocols (SW3660A and
17 SW3665A) were used to reduce matrix interferences in the sample extracts. Surrogate recoveries met
18 control criteria for all samples. Initial and continuing calibrations met criteria for all pesticide
19 compounds, with the exception of toxaphene with low recovery in an initial calibration verification
20 (ICV) standard associated with eight samples for which results were qualified as “UJ” based on
21 professional judgment. Pesticide method blanks were free of contamination. LCS recoveries
22 associated with 1 sample were outside acceptance criteria for 20 compounds that resulted in 20 data
23 points (5.6% of the data points) qualified as “J” or “UJ.” MS/MSD recoveries were outside control
24 limits for two pesticide compounds, resulting in the primary sample results being qualified as “J” or
25 “UJ” (0.56% of the data points); RPD values were within criteria. One groundwater sample required
26 being analyzed at a dilution, causing the method detection limits for this analysis to exceed USEPA
27 action levels for multiple pesticides. Column comparison criteria were met. No pesticide data were
28 rejected for any reason. Although some analyses were qualified as estimated, the deviations observed
29 should not have a significant impact on the results, and the values are considered technically sound
30 and defensible. Complete data summary tables, with associated qualifiers, are provided in
31 Appendix D and can be found in REIMS.

32 33 **F.3.4.5 Polychlorinated Biphenyl Analysis Groundwater Analysis**

34
35 Analytical holding times were met for all samples; as needed, clean-up protocols (SW3660A and
36 SW3665A) were used to reduce matrix interferences in the sample extracts. Surrogate recoveries met
37 control limits. Initial and continuing calibration criteria were met for all polychlorinated biphenyl
38 (PCB) compounds. PCB method blanks were free from contamination. LCS recoveries were within
39 acceptance criteria. MS/MSD recoveries and RPD values met criteria. No PCB data were estimated or
40 rejected for any reason. One groundwater sample required a dilution; method detection limits for this
41 dilution exceeded USEPA action levels for PCBs. All PCB values are considered technically sound
42 and defensible. Complete data summary tables, with associated qualifiers, are provided in
43 Appendix D and can be found in REIMS.

1 **F.3.4.6 Explosives and Nitroglycerin Groundwater Analysis**
2

3 Analytical holding times were met for all samples. Surrogate recoveries were below control limits in
4 groundwater samples, resulting in 160 data points qualified as “J” or “UJ” (18.8% of explosive data).
5 Initial and continuing calibration criteria were met, with the exception of 2-nitrotoluene with low
6 recovery in a continuing calibration verification (CCV) standard associated with seven samples for
7 which results were qualified as “UJ” based on professional judgment. All method blanks were free of
8 contamination. LCS recoveries exceeded criteria for 8 compounds, resulting in 77 results (9% of
9 explosives data points) being qualified as “UJ.” MS/MSD recoveries exceeded criteria for three
10 compounds which caused six sample results qualified as “J” or “UJ” (0.7% of the data points).
11 Column comparison criteria were exceeded for 10 results, which caused these data points to be
12 qualified as “J.” No explosives samples required dilutions. No data were rejected for any reason.
13 Although some analyses were qualified as estimated, the deviations observed should not have a
14 significant impact on the results, and the values are considered technically sound and defensible.
15 Complete data summary tables, with associated qualifiers, are provided in Appendix D and can be
16 found in REIMS.

17
18 **F.3.4.7 Metals and Phosphorus Groundwater Analysis**
19

20 Analytical holding times were met for all samples. Initial and continuing calibration criteria were
21 achieved for all elements. Sample results associated with calibration standard exceedances were
22 qualified as follows: if ICV or CCV results were above criteria, detects were qualified as “J”; if
23 ICV/CCV results were below criteria, detects were qualified as “J” and non-detects as “UJ.” Method
24 blank contamination resulted in 10 results being qualified as non-detect “U”; initial and continuing
25 calibration blank contamination resulted in several data points being qualified as “U.” LCS recoveries
26 met criteria. MS/MSD recoveries exceeded criteria for four metal compounds, which resulted in five
27 sample results (0.43% of metals data) qualified as “J” or “UJ.” MS/MSD RPD values were within
28 control limits. Professional judgment was used to qualify results, per above, based on ICV/CCV and
29 calibration blanks, as well as serial dilution and post digestion spike results. Reporting levels are
30 considered consistent with QAPP goals. No data were rejected for any reason. No dilutions were
31 required. Although some analyses were qualified as estimated, the deviations observed should not
32 have a significant impact on the results, and the reported values were considered technically sound
33 and defensible. Complete data summary tables, with associated qualifiers, are provided in
34 Appendix D and can be found in REIMS.

1 **F.3.4.8 Propellants Groundwater Analysis**
2

3 Analytical holding times were met for all samples. Initial and continuing calibration criteria were met
4 for all compounds. Method blanks were free from contamination. LCS recoveries were within
5 criteria. MS/MSD recoveries were not met for nitrocellulose, which resulted in one primary sample
6 result (12.5% of propellant data) qualified as non-detect at an estimated concentration “UJ”; the RPD
7 values were within control limits. No dilutions were required. No data were rejected for any reason.
8 Although some analyses were qualified as estimated, the deviations observed should not have a
9 significant impact on the results, and the values are considered technically sound and defensible.
10 Complete data summary tables, with associated qualifiers, are provided in Appendix D and can be
11 found in REIMS.

12
13 **F.3.4.9 Anions**
14

15 Six nitrate and nitrite results were qualified as estimated “J” or “UJ” due to missed holding times
16 (10.5% of anion data). Initial and continuing calibration criteria were met for all compounds. Method
17 and calibration blank contamination caused three nitrate and nitrite data point (5.3% of anion data) to
18 be qualified as “U” or “UJ.” MS/MSD recoveries were outside criteria for nitrate, nitrite, sulfate, and
19 sulfide, which resulted in 10 results qualified as “J” or “UJ” (17.5% of anion data) based on
20 professional judgment. MS/MSD RPD results met criteria. Laboratory duplicate RPD results were
21 outside criteria for nitrate, which resulted in one result qualified as estimated “J” (1.8% anion data).
22 Two nitrate groundwater samples and one sulfate groundwater sample required a dilution. Method
23 detection limits for these dilutions were below USEPA action limits for sulfate and nitrate. No data
24 were rejected for any reason. Although some analyses were qualified as estimated, the deviations
25 observed should not have a significant impact on the results, and the values are considered technically
26 sound and defensible. Complete data summary tables, with associated qualifiers, are provided in
27 Appendix D and can be found in REIMS.

28
29 **F.3.4.10 Cyanide**
30

31 Analytical holding times were met for all samples. Initial and continuing calibration criteria were met
32 for all compounds. Method blanks were free from contamination. LCS recoveries were within
33 criteria. MS/MSD recoveries and RPD values met criteria for cyanide. No dilutions were required. No
34 data were rejected for any reason. Although some analyses were qualified as estimated, the deviations
35 observed should not have a significant impact on the results, and the values are considered technically
36 sound and defensible. Complete data summary tables, with associated qualifiers, are provided in
37 Appendix D and can be found in REIMS.

38
39 **F.3.4.11 Perchlorate**
40

41 Analytical holding times were met for all samples. Initial and continuing calibration criteria were met
42 for all compounds. Method blanks were free from contamination. LCS recoveries were within
43 criteria. MS/MSD recoveries and RPD values met criteria for perchlorate. No dilutions were required.
44 No data were rejected for any reason. Although some analyses were qualified as estimated, the

1 deviations observed should not have a significant impact on the results, and the values are considered
2 technically sound and defensible. Complete data summary tables, with associated qualifiers, are
3 provided in Appendix D and can be found in REIMS.

4 5 **F.3.4.12 Alkalinity**

6
7 Analytical holding times were met for all samples. Initial and continuing calibration criteria were met
8 for alkalinity. Method blanks were free from contamination. LCS recoveries were within criteria.
9 MS/MSD recoveries and RPD values met criteria for alkalinity. No dilutions were required. No data
10 were rejected for any reason. Complete data summary tables, with associated qualifiers, are provided
11 in Appendix D and can be found in REIMS.

12 13 **F.3.4.13 Hexavalent Chromium**

14
15 Two hexavalent chromium results were qualified as estimated “UJ” due to missed holding times
16 (11% of hexavalent chromium). Initial and continuing calibration criteria were met for all
17 compounds. Method blanks were free from contamination. LCS recoveries were within criteria.
18 MS/MSD recoveries and RPD values met criteria. No dilutions were required. No data were rejected
19 for any reason. Although some analyses were qualified as estimated, the deviations observed should
20 not have a significant impact on the results, and the values are considered technically sound and
21 defensible. Complete data summary tables, with associated qualifiers, are provided in Appendix D
22 and can be found in REIMS.

23 24 **F.3.4.14 Precision**

25
26 Field duplicate samples were collected to assess the combined variability (i.e., precision) due to
27 environmental media, sampling reproducibility, and analytical precision. Field duplicate samples
28 were collected from the same spatial and temporal conditions as the primary environmental sample.

29
30 Field duplicate comparison information is presented in Table F.3-6. If a given analyte was not
31 detected in both the regular and field duplicate sample, precision was considered within limits and
32 results were not included in the table. The RPD was calculated only when both samples had reported
33 concentrations greater than five times the LOQ. When one or both sample values were between the
34 LOQ and five times the LOQ, the absolute difference was evaluated. Tables 12-1 through 12-17 of
35 the QAPP set the RPD criteria, while the absolute difference is set at one times the reporting limit. All
36 field duplicate comparisons met criteria.

37 38 **F.3.4.15 Sensitivity**

39
40 Determining minimum detectable values allows the investigation to assess the confidence that can be
41 placed in a value relative to the magnitude of analyte concentration observed. The closer a measured
42 value comes to the minimum detectable concentration, the less confidence and more variation the
43 measurement will have. Project sensitivity goals were expressed as quantitation level goals in the
44 QAPP. These levels were achieved or exceeded throughout the analytical process, with the exception

1 of one pesticide, one PCB, and three anion samples, which were analyzed at diluted levels. LOQs are
2 considered adequate for their intended use and have been considered during data interpretation and
3 statistical applications.

4
5 Method blank determinations were performed with each analytical sample batch for each analyte
6 under investigation. These blanks were evaluated to determine their potential impact on individual
7 data points. Action levels are set at 5 times the blank concentration for all analytes, except those
8 designated as common laboratory contaminants (i.e., methylene chloride, acetone, toluene, 2-
9 butanone, and phthalate compounds) for which the action level is 10 times the blank concentration.
10 Action limits for inorganics were set as 10 times the blank concentration. Reported sample
11 concentrations are evaluated against blank action levels, and the following qualifications are made
12 when reportable quantities of analytes were observed in the associated method blank:

- 13
- 14 • When the sample analyte concentration is above the action level (5–10 times the blank
15 concentration), the data are not qualified and it is considered a positive value.
- 16 • If the sample concentration is below the action level, the data are considered impacted by the
17 method blank. If the sample result is greater than the LOQ, the result is qualified as a non-
18 detectable concentration at the analyte value reported and these data are qualified as “U.” If
19 the sample result is greater than the level of detection (LOD) but less than the LOQ, the result
20 is qualified as a non-detectable concentration at the analyte value reported and these data are
21 qualified as “UJ.” If the sample result is less than the LOD (an estimated value), the result is
22 qualified as non-detectable at the concentration of the LOD and qualified as “U.”
- 23

24 No data were rejected as a result of method blank contamination; however, various analytes were
25 qualified as a non-detectable concentration “U,” as summarized in Table F.3-4.

26
27 Table F.3-5 summarizes analytes that were detected in trip blanks, field blanks, and equipment
28 blanks. The deionized water field blank and equipment rinsate blank were free from contamination.
29 The tap water blank, FWGqc-001-181001-SB, contained 11 metals, 1 PAH, 1 VOC, 1 pesticide, and
30 3 wet chemistry contaminations. Deionized water was used for the final stage of decontamination and
31 source blank results were not used to qualify data. In general, the field blank and rinsate blank results
32 indicate that the equipment decontamination procedure was effective and the potential for sample
33 contamination due to ambient field conditions is very low.

34
35 Fourteen trip blanks were collected. Carbon disulfide and methylene chloride were detected in project
36 trip blanks, as listed in Table 3-5. The concentrations observed were less than the reporting levels of 2
37 µg/L for carbon disulfide and 5 µg/L for methylene chloride. The transportation and sample storage
38 process, and the procedures and precautions employed, were effective in preserving the integrity of
39 the sample analysis.

40 41 **F.3.4.16 Representativeness and Comparability**

42
43 Representativeness expresses the degree to which data accurately reflect the analyte or parameter of
44 interest for the environmental media being studied and is the qualitative term most concerned with the

1 proper design of the sampling program. Factors that affect the representativeness of analytical data
2 include proper preservation, holding times, and use of standard sampling and analytical methods.
3 Samples were picked up on site by the TestAmerica courier, then delivered or shipped to the
4 appropriate laboratory location; samples were received within temperature specifications and in good
5 condition. Holding times were exceeded as discussed above; all samples were analyzed within two
6 times the holding time, and the data are therefore considered usable but estimated (“J,” “UJ”).

7
8 Comparability, like representativeness, is a qualitative term relative to an individual project data set.
9 The RI employed appropriate sampling methodologies, sample containers and preservation, and site
10 surveillance; used standard sampling devices and uniform training; and documented sampling
11 procedures, standard analytical protocols/procedures, QC checks with standard control limits, and
12 universally accepted data reporting units to ensure comparability to other data sets. Through the
13 proper implementation and documentation of these standard practices, the project has established the
14 confidence that the data will be comparable to other project and programmatic information.
15 Table F.3-7 present the standardized parameter groups, sample containers, preservation techniques,
16 and associated holding times for environmental media.

17 18 **F.3.4.17 Completeness**

19
20 Usable data are defined as those data that pass individual scrutiny during the verification and
21 validation process. These data, including estimated data, have been determined to be usable for
22 RVAAP restoration program objectives.

23
24 The completeness goal for analytical data is 95%, as defined in Tables 12-1 through 12-17 of the
25 FWGWMP Plan. One monitoring well could not be sampled, since the well was dry. All samples
26 specified in the 2018 Addendum (TEC-Weston 2019) were collected as planned, and usable results
27 were generated for 100% of sample analyses performed.

28 29 **F.3.5 DATA QUALITY ASSESSMENT SUMMARY**

30
31 The overall quality of the October 2018 sampling event meets established project objectives. Through
32 implementation of the project data verification, validation, and assessment process, project
33 information has been determined to be acceptable for use.

34
35 Data, as presented, have been qualified as usable; some data have been qualified estimated, “J” or
36 “UJ.” No data were rejected. Data that have been qualified as estimated indicate accuracy, precision,
37 or sensitivity did not meet all requirements, but results are considered adequate for interpretation. All
38 undetected analytes were reported at detection levels that were adequate for use during data
39 interpretation and statistical applications.

40 Data produced for this project demonstrate they can withstand scientific scrutiny; are appropriate for
41 its intended purpose; are technically defensible; and are of known and acceptable sensitivity,
42 precision, and accuracy. Data integrity has been documented through proper implementation of QA
43 and QC measures. The environmental information presented has an established confidence that allows
44 utilization for the project objectives and provides data for future needs.

^a Trip blanks only accompany samples for VOCs in water.

^b Propellants include nitrocellulose and nitroguanidine.

PAH = Polycyclic aromatic hydrocarbon.

PCB = Polychlorinated biphenyl.

QC = Quality control.

SVOC = Semi-volatile organic compound.

TB = Trip blank.

VOC = Volatile organic compound.

Table F.3-3. Summary of Qualified Results for Samples – October 2018 Sampling Event

^a Validation Qualifiers: J = estimated, U = not detected, UJ = not detected and reporting limit estimated.

^b Validation Reason Codes: CalBlk = calibration blank, CCV = continuing calibration verification, FldQC = field quality control, HT = holding time, IntStd = internal standard, LCS = laboratory control sample, MB = method blank, MS = matrix spike, ProJudge = professional judgment, RptLimit = reporting limit, Surr = surrogate recovery.

PAH = Polycyclic aromatic hydrocarbon.

PCB = Polychlorinated biphenyl.

SVOC = Semi-volatile organic compound.

VOC = Volatile organic compound.

-- = No data qualifier.

Table F.3-4. Detailed Listing of Qualified Results – October 2018 Sampling Event

^a Laboratory Qualifiers: J = estimated because result is between the method detection limit and the reporting limit, J1= Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria, U = not detected, H = Holding Time, M = Manually integrated compound, Q = One or more quality control failed.

^b Validation Qualifiers: J = estimated, R = rejected, U = not detected, and UJ = not detected and reporting limit estimated.

^c Validation Reason Codes: HT = holding time, LCS = laboratory control sample, MB = method blank, MS = matrix spike, ProJudge = professional judgment, RptLimit = reporting limit, and Surr = surrogate recovery.

BHC = Hexachlorocyclohexane.

DDD = Dichlorodiphenyldichloroethane.

DDE = Dichlorodiphenyldichloroethylene.

DDT = Dichlorodiphenyltrichloroethane.

ID = Identification.

µg/kg = Micrograms per kilogram.

µg/L = Micrograms per liter.

mg/kg = Milligrams per kilogram.

PAH = Polycyclic aromatic hydrocarbon.

PETN = Pentaerythritol tetranitrate.

SVOC = Semi-volatile organic compound.

VOC = Volatile organic compound.

Table F.3-5. Results for Analytes Detected in Field Blanks or Trip Blanks – October 2018 Sampling Event

| Sample ID | Analysis Type | Analyte Name | Result |
|---------------------|---------------|------------------------|------------|
| FWGTB-181005-TB | VOCs | Methylene Chloride | 0.00034J |
| FWGTB-181006-TB | VOCs | Methylene Chloride | 0.00039J |
| FWGTB-181006b-TB | VOCs | Methylene Chloride | 0.00033J |
| FWGTB-181010-TB | VOCs | Carbon Disulfide | 0.00093J |
| FWGqc-001-181001-SB | Metals | Arsenic | 0.00059J |
| FWGqc-001-181001-SB | Metals | Barium | 0.048 |
| FWGqc-001-181001-SB | Metals | Calcium | 73 |
| FWGqc-001-181001-SB | Metals | Copper | 0.0023 |
| FWGqc-001-181001-SB | Metals | Iron | 0.59 |
| FWGqc-001-181001-SB | Metals | Lead | 0.0002J |
| FWGqc-001-181001-SB | Metals | Magnesium | 29 |
| FWGqc-001-181001-SB | Metals | Manganese | 0.11 |
| FWGqc-001-181001-SB | Metals | Nickel | 0.011 |
| FWGqc-001-181001-SB | Metals | Sodium | 46J |
| FWGqc-001-181001-SB | Metals | Zinc | 0.019J |
| FWGqc-001-181001-SB | PAHs | Indeno(1,2,3-cd)pyrene | 0.0000067J |
| FWGqc-001-181001-SB | VOCs | Methylene Chloride | 0.00068J |
| FWGqc-001-181001-SB | Pesticides | DELTA-BHC | 0.000012J |
| FWGqc-001-181001-SB | Cyanide | Cyanide, Total | 0.018 |
| FWGqc-001-181001-SB | Anions | Sulfate | 43 |
| FWGqc-001-181001-SB | Alkalinity | Alkalinity | 220 |

Explosives, propellants, pesticides, and polychlorinated biphenyls were analyzed for and not detected.

Sample Type: TB = Trip blank.

Data Qualifiers: J = estimated

CAS = Chemical Abstract Service.

ID = Identification.

mg/L = Milligrams per liter.

NA = Not applicable.

^a RPD is calculated as $100 \times |R-D| / (R+D) / 2$, where R is the concentration of the regular sample and D is the concentration of the duplicate. The absolute difference is calculated as $|R-D|/L$, where L is the average reporting limit of the two samples. Values followed by a “%” are RPD values. Values in parentheses are absolute difference values.

^b The test used to evaluate the duplicate comparison is the RPD if both sample results were more than five times the reporting limit or D if any result was less than five times the reporting limit.

*RPD or D outside criteria

Data Qualifiers: J = estimated, U = not detected, and UJ = not detected and reporting limit estimated.

BHC = Hexachlorocyclohexane.

D = Absolute difference.

ID = Identification.

mg/kg = Milligrams per kilogram.

PAH = Polycyclic aromatic hydrocarbon.

SVOC = Semi-volatile organic compound.

RDX = Hexahydro-1,3,5-Trinitro-1,3,5-Triazine.

RPD = Relative percent difference.

SVOC = Semi-volatile organic compound.

Table F.3-7. Container Requirements for Ground Water Samples

| Analyte Group | Container | Minimum Sample Size | Preservative | Holding Time |
|---|------------------------|---------------------|--|--|
| Volatile Organic Compounds | Three 40-mL glass vial | 40 mL | HCl to pH <2 Cool \leq 6°C | 14 days |
| Semi-volatile Organic Compounds | Two 1-L amber glass | 1 L | Cool \leq 6°C | 7 days (extraction) 40 days (analysis) |
| Polycyclic Aromatic Hydrocarbon Compounds | Two 1-L amber glass | 1 L | Cool \leq 6°C | 7 days (extraction) 40 days (analysis) |
| Pesticide Compounds | Two 1-L amber glass | 1 L | Cool \leq 6°C | 7 days (extraction) 40 days (analysis) |
| Polychlorinated Biphenyls | Two 1-L amber glass | 1 L | Cool \leq 6°C | 1 year (extraction) 40 days (analysis) |
| Explosive Compounds | Two 500-mL amber glass | 500 mL | Cool \leq 6°C | 7 days (extraction) 40 days (analysis) |
| Nitroguanidine | Two 1-L amber glass | 1 L | Cool \leq 6°C | 7 days (extraction) 40 days (analysis) |
| Nitrocellulose | 500-mL amber glass | 250 mL | H ₂ SO ₄ , pH<2 Cool \leq 6°C | 28 days |
| Perchlorate | 125-mL HDPE | 10 mL | Cool \leq 6°C | 28 days |
| Metals (TAL)+Phosphorus+Mercury | 500-mL HDPE poly | 100 mL | HNO ₃ to pH <2 Cool \leq 6°C | 180 days; Hg at 28 days |
| Sulfide | 500-mL HDPE | 250 mL | NaOH/Zn Acetate, pH >9; Cool \leq 6°C | 7 days |
| Anions | 50-mL HDPE | 15 mL | Cool \leq 6°C | 48 hours (nitrate, nitrite) 28 days (sulfate) |
| Alkalinity | 250-mL HDPE | 250 mL | Cool \leq 6°C | 14 days |
| Total Cyanide | 250-mL HDPE | 100 mL | NaOH, Cool \leq 6°C | 14 days |
| Hexavalent Chromium | 125-mL HDPE | 50 mL | Cool \leq 6°C | 24 hours |

HCl = Hydrochloric acid.

HDPE = High density polyethylene.

Hg = Mercury.

HNO₃ = Nitric acid.

hr = Hour.

L = Liter.

mL = Milliliter.

NaOH = Sodium hydroxide.

TAL = Target analyte list.

Zn = Zinc.

Laboratory Data Verification Checklist

Project: Ravenna

Page 1 of 3

SDG No: J102733

Analyte Group: VOC, SVOC, Pest, PCB, Nitroguandine, Metals, Wet Chem

Sample Matrix: Water

EDD (Y/N): _____

Disposition of Data Package: _____

NCR No. (if applicable): _____

1. Case Narrative

Read SDG Case Narrative Y

Check Laboratory sample ID vs. Project sample ID lists Y

Check that discussion covers each analytical type included in the SDG Y

Check for identified nonconforming items (e.g., missed holding times, etc.) Y

2. Chain-of-Custody (COC)

Check COC sample collection, shipping, and receiving dates Y

Check that COC signature blocks are complete Y

Check COC project sample IDs vs. Lab IDs and Result Form IDs Y

Match COC requested analyses with Case Narrative and with data package content (Result Forms) Y

3. Analytical Results Form

Verify that a Result Form is present for each sample and analysis Y

On each Result Form check:

SDG No. Y

Sample ID Y

Lab ID Y

Date Collected Y

Date Extracted Y

Date Analyzed Y

Result Matrix Y

Result Units Y

4. Project Verification

| | |
|--|---|
| Check project analyte list vs. analytes reported | Y |
| Check project requested methods vs. analytical methods performed | Y |
| Check analyte reporting levels vs. project reporting level goals | Y |

5. Analytical Quality Control Information

| | |
|---|----|
| Check for surrogate recovery results (e.g., org. form II) | Y |
| Check for LCS results (e.g., org. form III, inorg. form XII) | Y |
| Check for method blank results (e.g., org. form IV, inorg. form III) | Y |
| Check for MS/MSD results (e.g., inorg. form V) | Y |
| Check for laboratory duplicate results (e.g., inorg. form VI) | NA |
| Check for Method Calibration and Run Documentation | |
| organic: | |
| instrument performance check | Y |
| initial calibration data | Y |
| continuing calibration data | Y |
| internal standard areas | Y |
| internal standard retention times | Y |
| sample clean-up documentation (org. forms V through X) | Y |
| metal: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| method linear range | Y |
| sample run sequence (inorg. forms II, IV, and VIII through XIV) | Y |
| other: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| sample run sequence | Y |

Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J102733

Analysis: VOC

Laboratory: Test America

Method: 8260B

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

"U", not detected at the associated level
"UJ", not detected and associated value estimated
"J", associated value estimated

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: All calibration results met control limits

SDG No: J102733

Analysis: SVOCs/SIM

Method: 8270D/SIM

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

One sample result was rejected due to low LCS %R

Definition of Qualifiers:

| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks:

Surrogates met control limits

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
 VOC internal standard retention times within \pm 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
 SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

IS results met control limits

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes/ No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|----------|----------|----------|-------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| Date | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|----------|----------|----------|-------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: MBs were free from contamination

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If compound results exceed the action levels, the data are not qualified
- 2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
- 3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
- 4. If gross contamination exists in blanks (i.e., saturated peaks by GC/ MS), all affected compounds in the associated samles should be qualifed as unusable (R) due to interference.
- 5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks: _____

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP) Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: NA

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

Linearity evaluation, are %RSD <20? Yes or No

Is the RPD between calibration factors ≤ 25 ? Yes or No

Are multicomponent calibration data provided for each analysis date? Yes or No

Is the difference between columns check $\leq 25\%D$? **Yes** or No

Sample confirmation columns were within control limits

Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$ Yes or No

Deviations:

| Compound | ^{%D} %RSD | RPD | Samples Affected |
|---------------------|---------------------------|-----|--|
| Toxaphene (Average) | 32.6% | | All samples (primary column) |
| Toxaphene (Average) | 26.36 | | All samples (secondary column, not reported) |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks: Average Toxaphene and PCB results were used to review Toxaphene and PCB validations due to multiple peaks
the average of the absolute value of the %D for each peak was used to calculate the %D

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:
percent recovery (%R)
relative percent difference (RPD)

| VOC | SVOC | Pest | PCB |
|--------|--------|--------|--------|
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
- 2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
- 3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
- 4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
- 5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
- 6. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS/D 280-433386

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one- half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: All LCS/D %R and RPD results met control limits

| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

Need to confirm with the laboratory that Nitroguanidine is 47 days

NOTE: hold time for nitroguanidine specified in QAPP as 7 days; the lab provided documentation in their ELAP approved SOP of extended hold time:

"17.2. There are no regulatory holding times for nitroguanidine. The holding time used for direct aqueous injection is 47 days for aqueous samples, and 14 days for soils."

No DVQ

IV. Initial & Continuing Calibration

A blank and five standards should be analyzed, with one of the standards being within 2X the MDL
Correlation coefficients must be ≥ 0.995
The RSD of the calibration factor or the relative response factor (RRF) must be $\leq 20\%$
Continuing calibration %D must be within $\pm 15\%$

Deviations:

| Compound | Correlation Coefficient | % RSD | %D | Samples Affected |
|----------|-------------------------|-------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any compounds initial calibration linearity is <0.995 , qualify the data as estimated (J/UJ)
- 2. If any compounds initial calibration linearity is <0.95 , qualify the data as unusable (R)
- 3. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)

Remarks:

All calibration results met control limits

V. Surrogate Recoveries

List surrogate compounds with unacceptable recoveries:

Deviations:

| Sample # | Surrogate ID | % R | QC Limits | Samples Affected |
|----------|--------------|-----|-----------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any surrogate recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any surrogate recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If surrogate recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If surrogate recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
6. Use professional judgement to qualify results when surrogate recoveries have been diluted out of spec.

Remarks:

Surrogates met control limits

VI. Blanks

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: MBs were free from contamination

VI. Blanks (continued)

Calculate action levels based on 5X the highest blank concentration of any given compound
Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If compound results exceed the action levels, the data are not qualified
- 2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
- 3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks: _____

VII. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

| | |
|-----------|------------|
| VOC types | SVOC types |
| 70-130 | 45-135 |
| <30 | <50 |

percent recovery (%R)
relative percent difference (RPD)

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If the spike recovery is outside limits, qualify all positive values in the unspiked sample as estimated (J)
- 2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
- 3. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
- 4. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
- 5. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA

VIII. Laboratory Control Sample Information

General LCS Criteria:

| | |
|--------------|---------------|
| VOC types | SVOC types |
| 80-120 | 60-120 |

percent recovery (%R)

Laboratory LCS Identifications:

LCS/D 280-433566 LCS 320-257557

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
- 2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
- 3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
- 4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

LCS/D %R and RPD results met control limits

**Leidos - Project Specific
Perchlorate by Mass Spectrometry Methods Data Verification/Validation**

Project: RVAAP

Page 1 of 10

SDG No: J102733

Analysis: Perchlorate

Method: 6860

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Isotope Ratios |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| Mas Tuning | |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

*** If this SDG requires full validation; recalculations from the raw data are required where noted in the verification/validation checklist. Attach all calculations at the end of the validation checklist.**

Data verification and data validation are essentially identical, with the exception that validation requires results to be recalculated from the raw data.

Remarks: DoD QSM and QAPP Guidance

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded

Verification/Validation by: Brooke Francis

Date: 12/21/18

QA Reviewed by: _____

Date: _____

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

Waters - Cool 4°C with headspace to reduce anaerobic biodegradation; analysis within 28 days of sample collection

Soils - Cool 4°C ; extraction within 28 days of sample collection; analysis within 18 days of sample extraction

Deviations:

| Sample # | Date Collected | Date Analyzed | Comments |
|----------|----------------|---------------|----------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
- 2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

All holding times were met

IV. $^{35}\text{CL}/^{37}\text{CL}$ Isotope Ratios

List any field samples, field QC samples, or laboratory QC samples where the $^{35}\text{CL}/^{37}\text{CL}$ Isotope ratio does not fall within 2.3 to 2.8:

Deviations:

| Sample # | Provide the ratio below: |
|----------|--------------------------|
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

| Sample # | Provide the ratio below: |
|----------|--------------------------|
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

Actions:

1. If the $^{35}\text{CL}/^{37}\text{CL}$ isotope ratio does not meet acceptance criteria the sample must be reanalyzed.
2. If any sample is reported with an unacceptable $^{35}\text{CL}/^{37}\text{CL}$ isotope ratio, the results must be rejected (R)

Remarks:

No qualification

V. Internal Standards Performance

Internal standard areas must be between $\pm 50\%$ of the average areas from the initial calibrations (Y/N)
Relative retention times must be within 0.98-1.02 (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time is outside acceptance criteria use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

IS met control limits

VI. Blanks

A method blank was reported for each aqueous analytical batch and one method blank was reported for each soil extraction batch? (Y/N)

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Sample ID # | Compound | Conc. |
|-------|-------------|----------|-------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| Date | Sample ID # | Compound | Conc. |
|------|-------------|----------|-------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Remarks: MB was free from contamination

VI. Blanks (continued)

Calculate the action level based on 5X the highest blank concentration

Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If compound results exceed the action levels, the data are not qualified
- 2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
- 3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
- 4. If contamination exists in method blanks < 1/2 LOQ, samples must be re-extracted and reanalyzed.
 Use professional judgement to qualify the data if this occurs.
- 5. If method blanks were not analyzed use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

Mass Calibration Acceptable? (Y/N) **(Y/N)**

Date of initial calibration: 10/25
 r>0.995? (Y/N)
 ICV ≤ 15% drift? (Y/N)

Date(s) of continuing calibration: 10/25
 CCV analyzed at beginning of analytical sequence and after every 10 field sample? (Y/N)
 CCV ≤ 15% drift? (Y/N)

LOQ Standard ≤ 30% drift? (Y/N)
 LOQ Standard analyzed daily? (Y/N)

Deviations: Calibration results met control limits

| Compound | Date | r value | %Drift | Samples Affected |
|----------|------|---------|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

*** If this SDG requires full validation; recalculate the r value, a CCV% Drift, and a LOQ % Drift from the raw data. Attach all calculations at the end of the validation checklist.**

1. If initial calibration curve criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. Only evaluate the ICV if it brackets field samples. If the ICV does bracket field samples, then CCV actions apply
3. If a CCV is above the upper control limit, qualify detects as estimated (J). Non-detects require no action.
4. If a CCV is below the lower control limit but > 30% recovery, qualify results as estimated (J/UJ).
5. If a CCV is ≤ 30% recovery, qualify detects as estimated (J) and non-detects as rejected (R)
6. If CCVs were not analyzed at the proper frequency, use professional judgement.
7. If an acceptable mass calibration was not performed, then all data should be rejected (R)
8. If a LOQ standard is above the upper control limit, qualify detects as estimated (J). Non-detects require no action.
9. If a LOQ standard is below the lower control limit but > 10% recovery, qualify results as estimated (J/UJ).
10. If a LOQ standard is ≤ 10% recovery, qualify detects as estimated (J) and non-detects as rejected (R)
11. If LOQ standards were not analyzed at the proper frequency, use professional judgement.

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

percent recovery (%R) 80-120% recovery

relative percent difference (RPD) 20% RPD

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
- 2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ).
- 3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
- 4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
- 5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
- 6. Use professional judgement for qualification of data for unspiked compounds

*** If this SDG requires full validation; recalculate at least one % recovery and one % RPD from the raw data. Attach all calculations at the end of the validation checklist.**

Remarks: NA

X. Laboratory Control Sample Information

General LCS Criteria:
Percent recovery (%R) = 80-120% recovery
RPD if LCSD performed = 20% RPD

Laboratory LCS Identifications: LCS 280-434921

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

*** If this SDG requires full validation; recalculate at least one % recovery and one % RPD (if LCSD was performed) from the raw data. Attach all calculations at the end of the validation checklist.**

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: LCS %R met control limits

LEIDOS
Metals Data Review Checklist

Project: RVAAP

Page 1 of 14

SDG No: J102733

Analysis: Metals/Mercury

Laboratory: Test America

Method: 6010/6020/7470

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|---|
| Case Narrative | MS/MSD Recoveries and Differences |
| Analytical Holding Times | Duplicate Relative Percent Differences |
| Sample Preservation | ICP Serial Dilution |
| Method Calibration | Furnace Atomic Absorption QC |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| LCS Recoveries | Internal Standard Performance (if applicable) |

Project specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall remarks: DoD QSM

One sample was qualified as non-detect due to blank contamination

Some samples were qualified as estimated due to calibration discrepancies

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If preserved samples exceed holding time, qualify all associated results as estimated (J/UJ).
2. If unpreserved samples exceed holding time, qualify all associated results as unusable (R).
3. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
4. If water samples are not acidified, use professional judgement. Minimally, qualify data as estimated (J) and non-detects unusable (R).
5. If soil samples exceed holding time, use professional judgement to qualify data.

Remarks:

All holding times were met

IV. Initial & Continging Calibration (ICP, GFAA, CVAA, etc.)

Initial calibration linearity criteria is $r \geq 0.995$

ICV and CCV criteria are $\pm 10\%$ recovery, low level check standard allowed $\pm 30\%$

ICP inter-element check standard criteria $\pm 20\%$

Deviations:

| Element | Date | Intial Calib. | ICV/CCV | %R | Samples Affected |
|-----------|-------------|---------------|---------|------|----------------------|
| Potassium | 10/18 5:13 | | CCVL | 122% | 102733-1 |
| Sodium | 10/18 18:11 | | CCVL | 132 | 102733-1 |
| Sodium | 10/18 19:00 | | CCVL | 136 | 102733-1 |
| Barium | 10/16 10:54 | | ICVL | 79% | None |
| Antimony | 10/17 6:17 | | CCVL | 125 | 102733-1 ND, no qual |

| Zinc | 10/17 12:22 | | CCVL | 121 | None |
| Manganese | 10/17 13:59 | | CCVL | 126 | none |
| Antimony | 10/17 13:59 | | CCVL | 122 | None |

Actions:

1. If any elements initial claibration linearity is < 0.995 , qualify the data as estimated (J/UJ)
2. If any elements initial claibration linearity is < 0.95 , qualify the data as unusable (R)
- 3a. If any elements ICV or CCV recovery is $< 90\%$, qualify the data as estimated (J/UJ)
- 3b. If any elements ICV or CCV recovery is $> 110\%$, qualify results \geq MDL as estimated (J).
Do not qualify non-detects.
- 4a. If any elements ICV or CCV recovery is $< 75\%$, qualify the data as unusable (R)
- 4b. If any elements ICV or CCV recovery is $> 125\%$ qualify positive results as estimated (J) or non-detects as unusable (R).
- 4c. If any element ICV or CCV recovery is $\geq 160\%$, qualify positive results \geq MDL as unusable (R).
Do not qualify non-detects.
- 5a. If any elements CRI recovery is 50 - 69% (30 - 49% for Sb, Pb, Tl), qualify results \geq MDL (but < 2 times CRQL) as estimated (J/UJ) and results > 2 times CRQL are not qualified.
- 5b. If any elements CRI recovery is $< 50\%$ ($< 30\%$ for Sb, Pb, Tl), qualify results \geq MDL (but < 2 times CRQL) and non-detects as unusable (R). Results > 2 times CRQL are estimated (J).
- 5c. If any elements CRI recovery is $> 130\%$ but $< 180\%$ ($> 150\%$ but $\leq 200\%$ for Sb, Pb, Tl), qualify results \geq MDL (but < 2 times CRQL) as esimated (J). And non-detects and results $\geq 2x$ CRQL are not qualified.
- 5d. If CRI or (R) $> 180\%$ ($> 200\%$ for Sb, Pb, Tl), qualify results that are \geq MDL as unusable (R).

Remarks: _____

IV. Initial & Contining Calibration (ICP, GFAA, CVAA, etc.) (continued)

Analytical Sequence and MS Tune

(Y/N)

- | | |
|--|---------|
| 1. Were the appropriate number of ICP standards used? | _____ Y |
| 2. Were the appropriate number of AA standards used? | _____ Y |
| 3. Was calibration performed and documented at the beginning of each run? | _____ Y |
| 4. Were calibration check standards run at 10% frequency or every two hours? | _____ Y |
| 5. Were low level standard checks analyzed at approximately 2X the PQL? | _____ Y |
| 6. Was ICP-MS mass calibration within 0.1 AMU? | _____ Y |
| 7. Was ICP-MS % RSD of the absolute signals for all analytes < 5%? | _____ Y |

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If instrument calibration is questionable, use professional judgement, qualify the data as estimated (J/UJ)
2. If instrument calibration documentation can not be obtained or is inadequate, qualify the data as unusable (R)
3. If mass calibration for ICP-MS was not within 0.1 AMU qualify analyte results as estimated (J/UJ)
4. If % RSD for ICP-MS was > 5% for any analyte in the tuning solution, qualify associated results as estimated (J/UJ).

Results:

V. Blanks (ICB, CCB, Method Blank, Equipment Rinsate Blank)**A. Blank Results**

If the blank level is > CRQL for any analyte, check that the analyte's concentration in the samples is > 10 times the blank value. The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account when applying the action level.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times V/W \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|-----------------|-----------|---------------------|--------------|-----------------------|
| CCB 10/18 2:42 | Sodium | 288 ug/L | | None |
| CCB 10/18 3:31 | Sodium | 400 | | None |
| CCB 10/18 4:20 | Sodium | 707 | 7070 | 102733-1 >AL, no qual |
| CCB 10/18 5:10 | Potassium | 785 | 7850 | 102733-1 (U) |
| | Sodium | 1830 | | ↓ |
| CCB 10/18 17:20 | Potassium | 369 | | None |
| CCB 10/18 18:08 | Sodium | 293 | | None |
| CCB 10/18 18:57 | Sodium | 321 | | None |
| CCB 10/17 00:46 | Antimony | 0.631 | | None |
| CCB 10/17 4:36 | Antimony | 0.505 | | None |
| CCB 10/17 5:23 | Antimony | 0.461 | 4.61 | 102733-1 ND, no qual |
| CCB 10/17 6:13 | Antimony | 0.449 | 4.49 | 102733-1 ND, no qual |

If additional space is required, use next page

Actions:

1. For blank results \geq MDL but \leq CRQL, qualify samples \geq MDL but $<$ CRQL as CRQL U.

Use professional judgement to qualify sample results exceeding the CRQL.

2a. If blank results are $>$ CRQL: For sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ 10 times the blank qualify results as unusable (R) or estimated (J). No action is taken for sample results \geq 10 times the blank levels.

2b. If ICB/ CCB results are $>$ CRQL; for sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ blank results, qualify results as not detected (U) at the level of the blank or unusable (R). Use professional judgement for sample results $>$ blank results.

Remarks:

V. Blanks (continued)

The highest blank concentration of observed elements is the action level.
 Sample weights, volumes, and dilution factors must be taken into account.
 Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.
 use the following equation:

$$\text{ug/L} \times V/W \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)
 W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |

V. Blanks (continued)

B. Frequency Requirements

(Y/N)

- 1. Was a method (preparation) blank analyzed for each matrix? Y
- 2. Was a method blank processed for every analytical batch (20 samples)? Y
- 3. Was a calibration blank analyzed at 10% frequency or every two hours? Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

Remarks: _____

C. Baseline Shift Evaluation

List the highest negative blank concentration for each analyte observed in laboratory or project blanks.

Deviations:

| Blank ID | Element | Max. Neg Conc. | Action Level | Samples Affected |
|----------|---------|----------------|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If the absolute value of the maximum negative blank result is > the CRQL, qualify positive results as estimated (J) and non-detects as estimated (UJ).

Remarks: _____

VI. Laboratory Control Sample Evaluation

All LCS recovery criteria are set at 80-120%

An LCS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Deviations:

| Element | Date | %R | Matrix | Samples Affected |
|---------|------|----|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any element's LCS recovery is >120%, qualify positive results as (J).
2. If any element's LCS recovery is 50-79%, qualify positive results as (J) and non-detect results as (UJ)
- 3a. If any element's LCS recovery is <50%, qualify positive results as (J) and non-detect results as (R)
- 3b. If the LCS recovery is > 150%, qualify all results as unusable (R).
4. For soil LCS recovery > upper limit, qualify samples results ≥ MDL as estimated (J).
5. For soil LCS recovery < lower limit, qualify results ≥ MDL as esimated (J) and non-detected estimated (UJ).
6. Use professional judgement to qualify data if the LCS frequency criteria are not met.

Remarks:

All LCS %R results met control limits

VII. Matrix Spike Evaluation

All MS recovery criteria are set at 75-125%

An MS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Verify that a field blank or PE sample was not used for spiked sample analysis

Verify that a post-digestion spike was analyzed for those analytes where the pre-digestion spike recovery is outside control limits and the sample result is < 4 times the spike added.

Project Sample(s) Spiked: _____

Deviations:

| Element | Spiked Sample Result | Sample Result | Spike Amount | %R | Samples Affected |
|---------|----------------------|---------------|--------------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the sample concentration exceeds the spiking level by a factor of 4X or more, do not qualify the data
2. If the spike recovery is >125%, qualify all positive values as (J).
3. If the spike recovery is between 30-74%, qualify positive values as (J) and non-detect values as estimated (UJ)
4. If the spike recovery is <30%, qualify positive values as (J) and non-detects are qualified unusable (R) if the post-digestion spike recovery is < 75% (or none was performed); non-detects are qualified as estimated (UJ) If the post-digestion spike recovery is ≥ 75%. There is no post-digestion spike performed for mercury.
5. Qualify all samples of similar matrix to the spiked sample in the same manner
6. Use professional judgement to qualify data if the MS frequency criteria are not met.
7. Use professional judgement for qualification of data for unspiked elements

Remarks: NA

VIII. Laboratory Duplicate Evaluation

Duplicate relative percent difference (RPD) for water is 20% (both results > 5 times CDRL) or < CRDL difference (if either result is < 5 times CRDL) and RPD for soil is 35% (if both results are > 5 times CRDL or < 2 times CRDL if either result is < 5 times CRDL).

When duplicate sample values are both less than the reporting level they are considered acceptable

When duplicate sample values are within 5X the reporting level they are acceptable if their absolute difference is within 3X the reporting level

Verify that a field blank on PE sample was not used for duplicate analysis.

Deviations: _____

| Element | Sample # | Duplicate # | RPD | Samples Affected |
|---------|----------|-------------|-----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If an element's RPD is >20% (water) / >35% (soil), qualify positive results as (J) and non-detect results as (UJ)
- 2. For low concentrations, if an element's duplicate absolute difference is > 3X the reporting level, qualify positive results as (J) and non-detect results as (UJ)
- 3. Use professional judgement to qualify data if the duplicate frequency criteria are not met.

Remarks: NA

IX. Inductively Coupled Plasma (ICP) Serial Dilution Analysis

Verify that a field blank or PE sample was not used for serial dilution.

Serial dilution of positive results are performed when values exceed 50X the IDL

Results from serial dilutions should agree within 10% of the original undiluted analysis

Deviations:

| Element | Sample # | Sample Result | Serial Dilution | %D | Action |
|---------|----------|---------------|-----------------|----|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If the serial dilution %D is >10 and the analyte results are >50X the IDL, qualify all positive results as estimated (J) and non-detects as estimated (UJ).

Remarks: NA

X. Furnace Atomic Absorption QC**A. Duplicate Precision**

(Y/N)

1. Were duplicate injections performed for all samples? _____
2. Were one point analytical spikes performed for all samples? _____
3. Did duplicate injections agree within $\pm 20\%$? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If duplicate injection results are outside $\pm 20\%$, qualify positive results as (J) and non-detect results as (UJ)

Remarks:

NA

B. Post Digestion Spike Recoveries

(Y/N)

1. Did post digestion spike recoveries meet an 85-115% recovery criteria? _____
2. If spike recoveries did not meet recovery criteria were samples analyzed by MSA? _____
3. If MSA was used to analyze samples, was its' correlation coefficient ≥ 0.995 ? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If post digestion spike recoveries are $>115\%$, qualify positive results as (J) and non-detect results as (U)
2. If post digestion spike recoveries are 11-84%, qualify positive results as (J) and non-detect results as (UJ)
3. If post digestion spike recoveries are $<10\%$, qualify positive results as (R) and non-detect results as (R)
4. If MSA was used to quantitate values and the correlation coefficient was <0.995 , qualify data as (J or UJ)
5. If MSA was used to quantitate values and the correlation coefficient was <0.95 , qualify data as (R)

Remarks:

NA

XI. Inductively Coupled Plasma (ICP) Interference Check Sample Evaluation

Interference check samples should be analyzed at the beginning and end of each analysis run, or at a minimum of twice per 8 hour working shift.

Results for the ICS solution AB must fall within control limits of 20% for analytes included in the solution. Evaluate the ICS A solution raw data for results with an absolute value \geq MDL for analytes that are not present in the ICS A solution.

Deviations:

| Element | Sample # | Sample Result | Interferent Result | Action |
|---------|----------|---------------|--------------------|--------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If the ICS AB %R for an analyte is > 120%, qualify sample results \geq MDL as estimated (J) and non-detects should not be qualified.
2. If the ICS AB %R for an analyte is 50-79%, qualify sample results that are \geq MDL as estimated (J) and non-detects as estimated (UJ).
3. If the ICS AB %R for an analyte is <50%, qualify all sample results that are \geq MDL and all non-detects as unusable (R).
4. If results \geq MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences and with analyte concentration that approximate those levels in the ICS A, sample results \geq MDL should be qualified as estimated (J) and non-detects should not be qualified.
5. If negative results with absolute values > MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences, affected sample results > MDL should be qualified as estimated (J) and non-detects (UJ).

Remarks:

All ICS results met control limits

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J102733

Analysis: Wet Chemistry

Method: 9012, 9034, 9056, 2320

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: DoD QSM

Some results were qualified as estimated due to holding time discrepancies

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH \geq 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH \leq 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |
|---------------------|---------|----------------|----------------|---------------|--------------|
| FWGqc-001-191001-SB | Nitrate | 10/11 13:00 | | 10/13 17:50 | Qualified UJ |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks:

See ADR Output

IV. Initial & Continuing Calibration

A blank and at least three standards should be analyzed, with one of the standards being within 2X the MDL

Correlation coefficients must be ≥ 0.995

Initial calibration check recoveries must be within 90-110%

Continuing calibration check recoveries must be within 85-115%

Deviations:

| Compound | Correlation Coefficient | ICV/CCV | %R | Samples Affected |
|----------|-------------------------|---------|----|------------------|
| | | | | |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any compounds initial calibration linearity is < 0.995 , qualify the data as estimated (J/UJ)
2. If any compounds initial calibration linearity is < 0.95 , qualify the data as unusable (R)
3. If ICV or CCV criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If ICV or CCV recoveries fall below 50%, qualify results as unusable (R)

Remarks:

Calibration results met control limits

V. Blanks (Method Blanks and Project Blanks)

An analytical method blank must be analyzed with each batch of samples
 Calculate action levels based on 5X the highest blank concentration of any given analyte
 Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Analyte | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|------------|-------------------------------|--------------------|--------------------------|
| Alkalinity | 1.13 mg/L | 5.65 mg/L | All samples >AL, no qual |
| Sulfate | 0.517 mg/L | 2.585 mg/L | All samples > AL |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If analyte results exceed the action levels, the data are not qualified
2. If analyte results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the analyte is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

VI. Laboratory Control Sample Information

Each analyte's LCS % recovery must be within the control limits established by the laboratory
In general LCS % recoveries should all be within 85-115%

Deviations:

| Analyte | Date | %R | Samples Affected/Qualifiers Applied |
|---------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the LCS recovery is outside limits but >10%, qualify all positive values as estimated (J)
- 2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
- 3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
- 4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: All LCS %R Results met control limits

VIII. Laboratory Duplicate Information

Each analyte's RPD should be within the laboratory established control limits
 In general RPDs should all be within 20%

Deviations:

| Analyte | RPD | RPD Limits | Samples Affected |
|---------|-----|------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH ≥ 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH ≤ 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |
|----------|---------|----------------|----------------|---------------|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks:

All holding times were met

IV. Initial & Continuing Calibration

A blank and at least three standards should be analyzed, with one of the standards being within 2X the MDL
 Correlation coefficients must be ≥ 0.995
 Initial calibration check recoveries must be within 90-110%
 Continuing calibration check recoveries must be within 85-115%

Deviations:

| Compound | Correlation Coefficient | ICV/CCV | %R | Samples Affected |
|----------|-------------------------|---------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any compounds initial calibration linearity is <0.995 , qualify the data as estimated (J/UJ)
- 2. If any compounds initial calibration linearity is <0.95 , qualify the data as unusable (R)
- 3. If ICV or CCV criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 4. If ICV or CCV recoveries fall below 50%, qualify results as unusable (R)

Remarks: MB was free from contamination

V. Blanks (Method Blanks and Project Blanks)

An analytical method blank must be analyzed with each batch of samples
 Calculate action levels based on 5X the highest blank concentration of any given analyte
 Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Analyte | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|---------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If analyte results exceed the action levels, the data are not qualified
- 2. If analyte results are below the required reporting level, report results as non-detect (U) at the reporting level
- 3. If the analyte is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

VI. Laboratory Control Sample Information

Each analyte's LCS % recovery must be within the control limits established by the laboratory
In general LCS % recoveries should all be within 85-115%

Deviations:

| Analyte | Date | %R | Samples Affected/Qualifiers Applied |
|---------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
- 2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
- 3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
- 4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

All LCS %R results met control limits

VII. Matrix Spike Information

Each analyte's Matrix Spike % recovery should be within the laboratory established control limits
In general matrix spike % recoveries should all be within 75-125%

Deviations:

| Analyte | %R | %R Limits | Samples Affected |
|---------|----|-----------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the spike recovery is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
- 2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
- 3. Use professional judgement to qualify additional samples in the analytical group based on MS results
- 4. Use professional judgement for qualification of data for unspiked analytes

Remarks:

All MS/MSD %R and RPD results met control limits

VIII. Laboratory Duplicate Information

Each analyte's RPD should be within the laboratory established control limits
In general RPDs should all be within 20%

Deviations:

| Analyte | RPD | RPD Limits | Samples Affected |
|---------|-----|------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the RPD is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
- 2. Use professional judgement to qualify additional samples in the analytical group based on RPD results
- 3. Use professional judgement for qualification of data when laboratory duplicates were not analyzed

Remarks:

NA

Note: Manual data validation qualifiers are applied to specific data points as a result of outlier QC results as indicated on the Form I, followed by a reason code that identifies the nature of the QC outlier. Except where qualified separately by ADR.net, in the absence of an annotated data validation qualifier, it is understood that the laboratory qualifier is the final data validation qualifier

1. Case Narrative

| | |
|---|---|
| Read SDG Case Narrative | Y |
| Check Laboratory sample ID vs. Project sample ID lists | Y |
| Check that discussion covers each analytical type included in the SDG | Y |
| Check for identified nonconforming items (e.g., missed holding times, etc.) | Y |

2. Chain-of-Custody (COC)

| | |
|---|---|
| Check COC sample collection, shipping, and receiving dates | Y |
| Check that COC signature blocks are complete | Y |
| Check COC project sample IDs vs. Lab IDs and Result Form IDs | Y |
| Match COC requested analyses with Case Narrative and with data package content (Result Forms) | Y |

3. Analytical Results Form

| | |
|---|---|
| Verify that a Result Form is present for each sample and analysis | Y |
| On each Result Form check: | |
| SDG No. | Y |
| Sample ID | Y |
| Lab ID | Y |
| Date Collected | Y |
| Date Extracted | Y |
| Date Analyzed | Y |
| Result Matrix | Y |
| Result Units | Y |

4. Project Verification

| | |
|--|---|
| Check project analyte list vs. analytes reported | Y |
| Check project requested methods vs. analytical methods performed | Y |
| Check analyte reporting levels vs. project reporting level goals | Y |

5. Analytical Quality Control Information

| | |
|---|----|
| Check for surrogate recovery results (e.g., org. form II) | Y |
| Check for LCS results (e.g., org. form III, inorg. form XII) | Y |
| Check for method blank results (e.g., org. form IV, inorg. form III) | Y |
| Check for MS/MSD results (e.g., inorg. form V) | Y |
| Check for laboratory duplicate results (e.g., inorg. form VI) | NA |
| Check for Method Calibration and Run Documentation | |
| organic: | |
| instrument performance check | Y |
| initial calibration data | Y |
| continuing calibration data | Y |

GC and LC Organic Data Review Checklist
(Explosives, PAHs, Herbicides, GRO/DRO, Methanol, etc.)

Project: RVAAP

Page 1 of 9

SDG No: J103914

Analysis: Explosives

Method: SW 8330B

Laboratory: TestAmerica

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | MS/MSD Recoveries and Differences |
| Sample Preservation | LCS Recoveries |
| Method Calibration | Re-analysis and Secondary Dilution |
| Method and Project Blanks | |

Overall Remarks: DOD QSM

No sample results were qualified

Definition of Qualifiers:

"U", not detected at the associated level
"UJ", not detected and associated value estimated
"J", associated value estimated
"R", associated value unusable or analyte identity unfounded
"=", compound properly identified and value positive

Reviewed by: Joseph C Peters

Date: 1/3/2019

QA Reviewed by: Richard Stach

Date: 01/05/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No dilutions or re-analysis required

III. Holding Times

VOC types - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection

VOC types - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection

VOC types - Soils - preserve/analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC types - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction

SVOC types - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC types | | SVOC types | | | Notes |
|----------|----------------|---------------|----------------|----------------|---------------|-------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

Actions:

- 1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
- 2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks: All holding times were met

IV. Initial & Continuing Calibration

A blank and five standards should be analyzed, with one of the standards being within 2X the MDL
 Correlation coefficients must be ≥ 0.995
 The RSD of the calibration factor or the relative response factor (RRF) must be $\leq 20\%$
 Continuing calibration %D must be within $\pm 15\%$

Deviations:

| Compound | Correlation Coefficient | % RSD | %D | Samples Affected |
|---------------------------|-------------------------|-------|-------|------------------|
| Tetryl @10:53 on 11/13/18 | | | +20.7 | None* |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any compounds initial calibration linearity is <0.995 , qualify the data as estimated (J/UJ)
- 2. If any compounds initial calibration linearity is <0.95 , qualify the data as unusable (R)
- 3. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)

Remarks: Tetryl recovered high, sample non-detect; no qualification of the data necessary

V. Surrogate Recoveries

List surrogate compounds with unacceptable recoveries:

Deviations:

| Sample # | Surrogate ID | % R | QC Limits | Samples Affected |
|----------|--------------|-----|-----------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any surrogate recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any surrogate recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If surrogate recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If surrogate recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
6. Use professional judgement to qualify results when surrogate recoveries have been diluted out of spec.

Remarks:

No discrepancies, confirmed with ADR

VI. Blanks

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: No contamination; confirmed with ADR

VI. Blanks (continued)

Calculate action levels based on 5X the highest blank concentration of any given compound
 Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

VII. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

percent recovery (%R)
 relative percent difference (RPD)

| | |
|-----------|------------|
| VOC types | SVOC types |
| 70-130 | 45-135 |
| <30 | <50 |

Project Sample(s) Spiked: None; LCS/LCSD analyzed

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is outside limits, qualify all positive values in the unspiked sample as estimated (J)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
4. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
5. Use professional judgement for qualification of data for unspiked compounds

Remarks: _____

VIII. Laboratory Control Sample Information

General LCS Criteria:

percent recovery (%R)

| | |
|-----------|------------|
| VOC types | SVOC types |
| 80-120 | 60-120 |

Laboratory LCS Identifications:

LCS 280-436978/2-A LCSD 280-436978/3-A

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

No discrepancies, confirmed with ADR

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J115789

Analysis: SVOCS, PAHS

Method: SW 8270D, 8270D-SIM

Laboratory: TestAmerica

Matrix: Aqueous

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DOD QSM

No data validation qualifiers

Definition of Qualifiers:

"U", not detected at the associated level
"UJ", not detected and associated value estimated
"J", associated value estimated
"R", associated value unusable or analyte identity unfounded
"=", compound properly identified and value positive

QA Reviewed by: Richard Saech

Date: 01/07/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No discrepancies

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No re-analysis and/or dilutions performed

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|----------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |
| | | | | | | | | |
| | | | | | | | | |

| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

Holding times met; confirmed by ADR

IV. System Monitoring Compounds (SMC) Recoveries (VOC, SVOC, Pesticides, PCBs)

List SMC compounds with unacceptable recoveries:

Note: SMC formerly known as surrogates.

Deviations:

| Sample # | VOC | | | SVOC B/N Compounds | | | SVOC Acid Compounds | | | Pest | PCB |
|----------|-----|-----|-----|-----------------------|-----|-----|------------------------|-----|-----|------|-----|
| | TOL | BFB | DCE | NBZ | FBP | TPH | PHL | 2FP | TBP | TCX | DCB |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks: No discrepancies, confirmed by ADR

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
 VOC internal standard retention times within \pm 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
 SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

~~No discrepancies, confirmed by ADR~~ — ADR DOES NOT EVALUATE ISTD; RESULTS MANUALLY VALIDATED AND FOUND TO BE COMPLIANT

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date:</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|--------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: No contamination; confirmed by ADR

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If gross contamination exists in blanks (i.e., saturated peaks by GC/MS), all affected compounds in the associated samples should be qualified as unusable (R) due to interference.
5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP) Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: 10/23/18, 10/29/18
 SVOC - Date(s) of continuing calibration: 10/29/18, 10/31/18 11/1/18 10/30/18
 Was the 12 hour criteria met? Y or N Y

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks:

All initial and continuing calibration criteria met

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

- Linearity evaluation, are %RSD <20? NA Yes or No
- Is the RPD between calibration factors ≤ 25 ? Yes or No
- Are multicomponent calibration data provided for each analysis date? Yes or No
- Is the difference between columns check $\leq 25\%D$? Yes or No
- Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$? Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks:

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:
 percent recovery (%R)
 relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: RQLMW-011-181001-GW

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks:

All criteria met, confirmed by ADR

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS 280-4434728/2-A LCS 280-434728/3-A

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: All criteria met; confirmed by ADR

| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

All holding times were met; ADR confirmed

IV. Initial & Continuing Calibration

A blank and five standards should be analyzed, with one of the standards being within 2X the MDL
 Correlation coefficients must be ≥ 0.995
 The RSD of the calibration factor or the relative response factor (RRF) must be $\leq 20\%$
 Continuing calibration %D must be within $\pm 15\%$

Deviations:

| Compound | Correlation Coefficient | % RSD | %D | Samples Affected |
|----------|-------------------------|-------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any compounds initial calibration linearity is <0.995 , qualify the data as estimated (J/UJ)
2. If any compounds initial calibration linearity is <0.95 , qualify the data as unusable (R)
3. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)

Remarks:

All initial and continuing calibration criteria met

MNX not a target

V. Surrogate Recoveries

List surrogate compounds with unacceptable recoveries:

Deviations:

| Sample # | Surrogate ID | % R | QC Limits | Samples Affected |
|----------|--------------|-----|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |

VI. Blanks (continued)

Calculate action levels based on 5X the highest blank concentration of any given compound
Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If compound results exceed the action levels, the data are not qualified
- 2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
- 3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

VII. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

percent recovery (%R)
relative percent difference (RPD)

| | |
|-----------|------------|
| VOC types | SVOC types |
| 70-130 | 45-135 |
| <30 | <50 |

Project Sample(s) Spiked: None; LCS/LCSD analyzed

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is outside limits, qualify all positive values in the unspiked sample as estimated (J)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
4. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
5. Use professional judgement for qualification of data for unspiked compounds

Remarks: _____

VIII. Laboratory Control Sample Information

General LCS Criteria:

percent recovery (%R)

| | |
|-----------|------------|
| VOC types | SVOC types |
| 80-120 | 60-120 |

Laboratory LCS Identifications:

LCS 280-438225/2-A, LCSD 280-438225/3-A

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
- 2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
- 3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
- 4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

All LCS/LCSD recovery and RPD values within limits; ADR confirmed

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J115789

Analysis: Alkalinity, sulfide, nitrate/ nitrite

Method: 2320B, 9034, 9056A

Laboratory: TestAmerica

Matrix: Aqueous

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: _____

Some results qualified as estimated due to holding time and MS/MSD recovery outliers.

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: 

Date: 1/6/19

QA Reviewed by: 

Date: 01/07/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: _____

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: _____

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH \geq 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH \leq 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |
|----------|---------|----------------|----------------|---------------|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks: See ADR output

NOTE: ADR INDICATED UNDER HOLD TIME MISLEADING INFORMATION; BASED ON REANALYSIS FOR SULFATE INDICATED THAT THE 48 HOUR HOLD TIME FOR NO3 BY THE SAME METHOD WAS EXCEEDED; HOWEVER ADR WAS CORRECT IN NOT QUALIFYING THE ACTUAL NO3 RESULTS

V. Blanks (Method Blanks and Project Blanks)

An analytical method blank must be analyzed with each batch of samples
 Calculate action levels based on 5X the highest blank concentration of any given analyte
 Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Analyte | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|--------------------------|-------------------------------|--------------------|------------------------------|
| CCB 10/19 @9:42 sulfate | 0.37 mg/L | 1.85 | None; results > action level |
| CCB 10/22 @15:29 sulfate | 0.464 mg/L | 2.32 | ↓ |
| CCB 10/24 @18:58 ALK | 1.38 mg/L | 6.9 | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If analyte results exceed the action levels, the data are not qualified
2. If analyte results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the analyte is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

See ADR output for method blank contamination no qualifiers due to MB contamination, results > action level

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks:

See ADR output; results qualified as estimated; A03

IV. Initial & Continuing Calibration

A blank and at least three standards should be analyzed, with one of the standards being within 2X the MDL

Correlation coefficients must be ≥ 0.995

Initial calibration check recoveries must be within 90-110%

Continuing calibration check recoveries must be within 85-115%

Deviations:

| Compound | Correlation Coefficient | ICV/CCV | %R | Samples Affected |
|----------|-------------------------|---------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any compounds initial calibration linearity is <0.995 , qualify the data as estimated (J/UJ)
2. If any compounds initial calibration linearity is <0.95 , qualify the data as unusable (R)
3. If ICV or CCV criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If ICV or CCV recoveries fall below 50%, qualify results as unusable (R)

Remarks:

All initial and continuing calibration criteria met

V. Blanks (Method Blanks and Project Blanks)

An analytical method blank must be analyzed with each batch of samples
 Calculate action levels based on 5X the highest blank concentration of any given analyte
 Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Analyte | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If analyte results exceed the action levels, the data are not qualified
2. If analyte results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the analyte is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

See ADR output for MB (no contamination), data package confirmed no contamination in CCBs

VII. Matrix Spike Information

Each analyte's Matrix Spike % recovery should be within the laboratory established control limits
In general matrix spike % recoveries should all be within 75-125%

Deviations:

| Analyte | %R | %R Limits | Samples Affected |
|-----------|-------|-----------|---------------------------|
| Hex Chrom | 47/43 | 90-111 | Native Sample UJ, H02 |
| | | | ALSO QUAL FIELD DUPLICATE |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the spike recovery is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
- 2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
- 3. Use professional judgement to qualify additional samples in the analytical group based on MS results
- 4. Use professional judgement for qualification of data for unspiked analytes

Remarks:

ADR output did not document MS/MSD outliers

Project: RVAAP

Page 1 of 3

SDG No: J115877

Analyte Group: VOC, SVOC, Pesticides, PCB, Explosives, Metals, Wet Chem

Sample Matrix: Water

EDD (Y/N): _____

Disposition of Data Package: _____

NCR No. (if applicable): _____

1. Case Narrative

Read SDG Case Narrative Y

Check Laboratory sample ID vs. Project sample ID lists Y

Check that discussion covers each analytical type included in the SDG Y

Check for identified nonconforming items (e.g., missed holding times, etc.) Y

2. Chain-of-Custody (COC)

Check COC sample collection, shipping, and receiving dates Y

Check that COC signature blocks are complete Y

Check COC project sample IDs vs. Lab IDs and Result Form IDs Y

Match COC requested analyses with Case Narrative and with data package content (Result Forms) Y

3. Analytical Results Form

Verify that a Result Form is present for each sample and analysis Y

On each Result Form check: Y

SDG No. Y

Sample ID Y

Lab ID Y

Date Collected Y

Date Extracted Y

Date Analyzed Y

Result Matrix Y

Result Units Y

4. Project Verification

| | |
|--|---|
| Check project analyte list vs. analytes reported | Y |
| Check project requested methods vs. analytical methods performed | Y |
| Check analyte reporting levels vs. project reporting level goals | Y |

5. Analytical Quality Control Information

| | |
|---|---|
| Check for surrogate recovery results (e.g., org. form II) | Y |
| Check for LCS results (e.g., org. form III, inorg. form XII) | Y |
| Check for method blank results (e.g., org. form IV, inorg. form III) | Y |
| Check for MS/MSD results (e.g., inorg. form V) | Y |
| Check for laboratory duplicate results (e.g., inorg. form VI) | Y |
| Check for Method Calibration and Run Documentation | |
| organic: | |
| instrument performance check | Y |
| initial calibration data | Y |
| continuing calibration data | Y |
| internal standard areas | Y |
| internal standard retention times | Y |
| sample clean-up documentation (org. forms V through X) | Y |
| metal: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| method linear range | Y |
| sample run sequence (inorg. forms II, IV, and VIII through XIV) | Y |
| other: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| sample run sequence | Y |

6. Incorrect Information

Identify missing items or incorrect information (i.e., missing forms, unsigned forms, incorrect sample IDs, etc.)

Contact the laboratory or project personnel to obtain missing information or correct information

Document corrections below:

7. Nonconforming Items

Document all nonconforming items that can not be resolved above in a Non-Conformance Report (NCR), complete form, file, and follow-up

LEIDOS

Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J115877

Analysis: VOC

Laboratory: Test America

Method: 8260

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 12/22/18

QA Reviewed by: Rochman Saeh

Date: 01/03/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|----------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

All holding times were met

IV. System Monitoring Compounds (SMC) Recoveries (VOC, SVOC, Pesticides, PCBs)

List SMC compounds with unacceptable recoveries:

Note: SMC formerly known as surrogates.

Deviations:

| Sample # | VOC | | | SVOC B/N Compounds | | | SVOC Acid Compounds | | | Pest | PCB |
|----------|-----|-----|-----|-----------------------|-----|-----|------------------------|-----|-----|------|-----|
| | TOL | BFB | DCE | NBZ | FBP | TPH | PHL | 2FP | TBP | TCX | DCB |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks:

All surrogates met control limits

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
VOC internal standard retention times within ± 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
- 2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
- 3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
- 4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
- 5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

All IS results met control limits

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date:</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|--------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: MB and TB were free from contamination

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If gross contamination exists in blanks (i.e., saturated peaks by GC/MS), all affected compounds in the associated samples should be qualified as unusable (R) due to interference.
5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB/ DFTPP) Acceptable (Y) or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: 10/22/18
 VOC - Date(s) of continuing calibration: 11/2/18
 Was the 12 hour criteria met? (Y) or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: Calibration results met control limits

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

Linearity evaluation, are %RSD <20? Yes or No

Is the RPD between calibration factors \leq 25? Yes or No

Are multicomponent calibration data provided for each analysis date? Yes or No

Is the difference between columns check \leq 25%D? Yes or No

Are 4, 4'- DDT and endrin breakdown (PEM) \leq 20% and combined breakdown \leq 30% Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks:

NA

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:
 percent recovery (%R)
 relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS 280-436013

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one- half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: All LCS%R results met control limits

Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J115877

Analysis: SVOCs/PAH

Laboratory: Test America

Method: 8270/SIM

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No sample results were reanalyzed or diluted

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|----------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |
| | | | | | | | | |
| | | | | | | | | |

| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks:

No qual

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
 VOC internal standard retention times within ± 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y) (N)
 SVOC internal standard retention times within + 30 seconds of standard (Y) (N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

All IS results met control limits

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| Date | Lab ID # | Fraction | Compound | Conc. (ppb) |
|------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Remarks: MBs were free from contamination

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP) Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: 10/23/18 10/29/18
 SVOC - Date(s) of continuing calibration: 10/31/18 10/29/18
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: All calibration results met control limits

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

Linearity evaluation, are %RSD <20? Yes or No

Is the RPD between calibration factors ≤ 25 ? Yes or No

Are multicomponent calibration data provided for each analysis date? Yes or No

Is the difference between columns check $\leq 25\%D$? Yes or No

Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$? Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks: NA

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

percent recovery (%R)

relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS/D 280-434728 LCS 280-434609

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: All LCS/D %R and RPD results met control limits

Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J115877

Analysis: PCB/Pesticides

Laboratory: Test America

Method: 8081-8082

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

Some pesticide results were qualified as estimated due to LCS discrepancies and column comparison

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Remarks: MB were free from contamination

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If gross contamination exists in blanks (i.e., saturated peaks by GC/MS), all affected compounds in the associated samples should be qualified as unusable (R) due to interference.
5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP) Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: NA

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

- Linearity evaluation, are %RSD <20? Yes or No
- Is the RPD between calibration factors ≤ 25 ? Yes or No
- Are multicomponent calibration data provided for each analysis date? Yes or No
- Is the difference between columns check $\leq 25\%D$? Yes or No
- Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$? Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|-------------------------------|------|-----|--|
| Delta-BHC RQLmw-009-181001-GW | | | 43.9% RPD (Column discrepancy) Sample result J M08 |
| Toxaphene (ICV) | | | 32.56% Average %D (-32.6) -ND, no qual UJ C05 |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks:

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

percent recovery (%R)

relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
- 2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
- 3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
- 4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
- 5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
- 6. Use professional judgement for qualification of data for unspiked compounds

Remarks:

NA

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS/D 280-434423

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: See ADR for discrepancies

The laboratory control sample (LCS) associated with batch 280-438624 was outside control limits for all surrogates and spikes. There was a note from the prep lab stating some of the extract was lost during concentration. The LCSD sample is in control for all spikes. RPD values were outside control limits due to the failed LCS sample. Because the LCSD was in control and it is known that the LCS is out do to loss of sample, data is reported. This LCS/LCSD is associated with sample RQLmw-009-181001-GW (280-115877-1) .

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No sample results were reanalyzed or diluted

III. Holding Times

VOC types - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection

VOC types - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection

VOC types - Soils - preserve/analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC types - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction

SVOC types - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC types | | SVOC types | | | Notes: |
|----------|----------------|---------------|----------------|----------------|---------------|--------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any compounds initial calibration linearity is <0.995 , qualify the data as estimated (J/UJ)
2. If any compounds initial calibration linearity is <0.95 , qualify the data as unusable (R)
3. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)

Remarks:

Tetryl results were ND, no qual

V. Surrogate Recoveries

List surrogate compounds with unacceptable recoveries:

Deviations:

| Sample # | Surrogate ID | % R | QC Limits | Samples Affected |
|----------|--------------|-----|-----------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any surrogate recovery is <10%, qualify all positive results in associated fractions as estimated (J)
- 2. If any surrogate recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
- 3. If surrogate recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
- 4. If surrogate recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
- 6. Use professional judgement to qualify results when surrogate recoveries have been diluted out of spec.

Remarks:

All surrogates met control limits

VI. Blanks

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |

Actions:

1. If preserved samples exceed holding time, qualify all associated results as estimated (J/UJ).
2. If unpreserved samples exceed holding time, qualify all associated results as unusable (R).
3. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
4. If water samples are not acidified, use professional judgement. Minimally, qualify data as estimated (J) and non-detects unusable (R).
5. If soil samples exceed holding time, use professional judgement to qualify data.

Remarks:

All holding times were met

IV. Initial & Contining Calibration (ICP, GFAA, CVAA, etc.)

Initial calibration linearity criteria is $r \geq 0.995$

ICV and CCV criteria are $\pm 10\%$ recovery, low level check standard allowed $\pm 30\%$

ICP inter-element check standard criteria $\pm 20\%$

Deviations:

| Element | Date | Intial Calib. | ICV/CCV | %R | Samples Affected |
|-----------|------------|---------------|---------|-----|------------------|
| Cadmium | 11/2 19:01 | | CCVL | 78 | None |
| Beryllium | 11/3 00:17 | | CCVL | 128 | None |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any elements initial claibration linearity is <0.995 , qualify the data as estimated (J/UJ)
2. If any elements initial claibration linearity is <0.95 , qualify the data as unusable (R)
- 3a. If any elements ICV or CCV recovery is $<90\%$, qualify the data as estimated (J/UJ)
- 3b. If any elements ICV or CCV recovery is $> 110\%$, qualify results \geq MDL as estimated (J).
Do not qualify non-detects.
- 4a. If any elements ICV or CCV recovery is $<75\%$, qualify the data as unusable (R)
- 4b. If any elements ICV or CCV recovery is $> 125\%$ qualify positive results as estimated (J) or non-detects as unusable (R).
- 4c. If any element ICV or CCV recovery is $\geq 160\%$, qualify positive results \geq MDL as unusable (R).
Do not qualify non-detects.
- 5a. If any elements CRI recovery is 50 - 69% (30 - 49% for Sb, Pb, Tb), qualify results \geq MDL (but < 2 times CRQL) as estimated (J/UJ) and results > 2 times CRQL are not qualified.
- 5b. If any elements CRI recovery is $< 50\%$ ($<30\%$ for Sb, Pb, TI), qualify results \geq MDL (but < 2 times CRQL) and non-detects as unusable (R). Results > 2 times CRQL are estimated (J).
- 5c. If any elements CRI recovery is $> 130\%$ but $< 180\%$ ($>150\%$ but $\leq 200\%$ for Sb, Pb, TI), qualify results \geq MDL (but < 2 times CRQL) as esimated (J). And non-detects and results $\geq 2x$ CRQL are not qualified.
- 5d. If CRI or (R) $> 180\%$ ($> 200\%$ for Sb, Pb, Ti), qualify results that are \geq MDL as unusable (R).

Remarks:

| 7. Was ICP-MS % RSD of the absolute signals for all analytes < 5%? | <u> </u> <u> </u> <u> </u> | Y |

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If instrument calibration is questionable, use professional judgement, qualify the data as estimated (J/UJ)
2. If instrument calibration documentation can not be obtained or is inadequate, qualify the data as unusable (R)
3. If mass calibration for ICP-MS was not within 0.1 AMU qualify analyte results as estimated (J/UJ)
4. If % RSD for ICP-MS was > 5% for any analyte in the tuning solution, qualify associated results as estimated (J/UJ).

Results:

V. Blanks (ICB, CCB, Method Blank, Equipment Rinsate Blank)**A. Blank Results**

If the blank level is > CRQL for any analyte, check that the analyte's concentration in the samples is > 10 times the blank value. The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account when applying the action level.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times \text{V/W} \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|----------------|-----------|---------------------|--------------|-----------------------|
| ICB 11/2 16:11 | Vanadium | 1.11 ug/L | 11.1 ug/L | None |
| CCB 11/2 18:57 | Antimony | 0.483 ug/L | 4.83 ug/L | None |
| | Vanadium | 0.544 ug/L | 5.44 ug/L | None |
| CCB 11/2 22:53 | Antimony | 0.448 ug/L | 4.48 ug/L | 115877-1 ND no qual |
| MB 434973 | Calcium | 54.2 ug/L | 542 ug/L | 115877-1 >AL, no qual |
| MB 434761 | Manganese | 0.624 ug/L | 6.24 ug/L | 115877-1 >AL, no qual |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

If additional space is required, use next page

Actions:

1. For blank results \geq MDL but \leq CRQL, qualify samples \geq MDL but $<$ CRQL as CRQL U.

Use professional judgement to qualify sample results exceeding the CRQL.

2a. If blank results are $>$ CRQL: For sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ 10 times the blank qualify results as unusable (R) or estimated (J). No action is taken for sample results \geq 10 times the blank levels.

2b. If ICB/ CCB results are $>$ CRQL; for sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ blank results, qualify results as not detected (U) at the level of the blank or unusable (R). Use professional judgement for sample results $>$ blank results.

Remarks:

V. Blanks (continued)

The highest blank concentration of observed elements is the action level.
 Sample weights, volumes, and dilution factors must be taken into account.
 Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.
 use the following equation:

$$\text{ug/L} \times V/W \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)
 W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |

V. Blanks (continued)

B. Frequency Requirements

(Y/N)

- 1. Was a method (preparation) blank analyzed for each matrix? Y
- 2. Was a method blank processed for every analytical batch (20 samples)? Y
- 3. Was a calibration blank analyzed at 10% frequency or every two hours? Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Remarks: _____

C. Baseline Shift Evaluation

List the highest negative blank concentration for each analyte observed in laboratory or project blanks.

Deviations:

| Blank ID | Element | Max. Neg Conc. | Action Level | Samples Affected |
|----------|---------|----------------|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If the absolute value of the maximum negative blank result is > the CRQL, qualify positive results as estimated (J) and non-detects as estimated (UJ).

Remarks: _____

VI. Laboratory Control Sample Evaluation

All LCS recovery criteria are set at 80-120%

An LCS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Deviations:

| Element | Date | %R | Matrix | Samples Affected |
|---------|------|----|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any element's LCS recovery is >120%, qualify positive results as (J).
- 2. If any element's LCS recovery is 50-79%, qualify positive results as (J) and non-detect results as (UJ)
- 3a. If any element's LCS recovery is <50%, qualify positive results as (J) and non-detect results as (R)
- 3b. If the LCS recovery is > 150%, qualify all results as unusable (R).
- 4. For soil LCS recovery > upper limit, qualify samples results ≥ MDL as estimated (J).
- 5. For soil LCS recovery < lower limit, qualify results ≥ MDL as esimated (J) and non-detected estimated (UJ).
- 6. Use professional judgement to qualify data if the LCS frequency criteria are not met.

Remarks:

All LCS %R and RPD results met control limits

VII. Matrix Spike Evaluation

All MS recovery criteria are set at 75-125%

An MS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Verify that a field blank or PE sample was not used for spiked sample analysis

Verify that a post-digestion spike was analyzed for those analytes where the pre-digestion spike recovery is outside control limits and the sample result is < 4 times the spike added.

Project Sample(s) Spiked: _____

Deviations:

| Element | Spiked Sample Result | Sample Result | Spike Amount | %R | Samples Affected |
|---------|----------------------|---------------|--------------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the sample concentration exceeds the spiking level by a factor of 4X or more, do not qualify the data
2. If the spike recovery is >125%, qualify all positive values as (J).
3. If the spike recovery is between 30-74%, qualify positive values as (J) and non-detect values as estimated (UJ)
4. If the spike recovery is <30%, qualify positive values as (J) and non-detects are qualified unusable (R) if the post-digestion spike recovery is < 75% (or none was performed); non-detects are qualified as estimated (UJ) If the post-digestion spike recovery is ≥ 75%. There is no post-digestion spike performed for mercury.
5. Qualify all samples of similar matrix to the spiked sample in the same manner
6. Use professional judgement to qualify data if the MS frequency criteria are not met.
7. Use professional judgement for qualification of data for unspiked elements

Remarks: NA

VIII. Laboratory Duplicate Evaluation

Duplicate relative percent difference (RPD) for water is 20% (both results > 5 times CDRL) or < CRDL difference (if either result is < 5 times CRDL) and RPD for soil is 35% (if both results are > 5 times CRDL or < 2 times CRDL if either result is < 5 times CRDL).

When duplicate sample values are both less than the reporting level they are considered acceptable

When duplicate sample values are within 5X the reporting level they are acceptable if their absolute difference is within 3X the reporting level

Verify that a field blank on PE sample was not used for duplicate analysis.

Deviations: _____

| Element | Sample # | Duplicate # | RPD | Samples Affected |
|---------|----------|-------------|-----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If an element's RPD is >20% (water) / >35% (soil), qualify positive results as (J) and non-detect results as (UJ)
2. For low concentrations, if an element's duplicate absolute difference is > 3X the reporting level, qualify positive results as (J) and non-detect results as (UJ)
3. Use professional judgement to qualify data if the duplicate frequency criteria are not met.

Remarks: NA

IX. Inductively Coupled Plasma (ICP) Serial Dilution Analysis

Verify that a field blank or PE sample was not used for serial dilution.

Serial dilution of positive results are performed when values exceed 50X the IDL

Results from serial dilutions should agree within 10% of the original undiluted analysis

Deviations:

| Element | Sample # | Sample Result | Serial Dilution | %D | Action |
|---------|----------|---------------|-----------------|----|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If the serial dilution %D is >10 and the analyte results are >50X the IDL, qualify all positive results as estimated (J) and non-detects as estimated (UJ).

Remarks:

NA

X. Furnace Atomic Absorption QC**A. Duplicate Precision**

(Y/N)

1. Were duplicate injections performed for all samples? _____
2. Were one point analytical spikes performed for all samples? _____
3. Did duplicate injections agree within $\pm 20\%$? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If duplicate injection results are outside $\pm 20\%$, qualify positive results as (J) and non-detect results as (UJ)

Remarks:

NA

B. Post Digestion Spike Recoveries

(Y/N)

1. Did post digestion spike recoveries meet an 85-115% recovery criteria? _____
2. If spike recoveries did not meet recovery criteria were samples analyzed by MSA? _____
3. If MSA was used to analyze samples, was its' correlation coefficient ≥ 0.995 ? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If post digestion spike recoveries are $>115\%$, qualify positive results as (J) and non-detect results as (U)
2. If post digestion spike recoveries are 11-84%, qualify positive results as (J) and non-detect results as (UJ)
3. If post digestion spike recoveries are $<10\%$, qualify positive results as (R) and non-detect results as (R)
4. If MSA was used to quantitate values and the correlation coefficient was <0.995 , qualify data as (J or UJ)
5. If MSA was used to quantitate values and the correlation coefficient was <0.95 , qualify data as (R)

Remarks:

NA

XI. Inductively Coupled Plasma (ICP) Interference Check Sample Evaluation

Interference check samples should be analyzed at the beginning and end of each analysis run,
or at a minimum of twice per 8 hour working shift.

Results for the ICS solution AB must fall within control limits of 20% for analytes included in the solution.
Evaluate the ICS A solution raw data for results with an absolute value \geq MDL for analytes that are not present
in the ICS A solution.

Deviations:

| Element | Sample # | Sample Result | Interferent Result | Action |
|---------|----------|---------------|--------------------|--------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If the ICS AB %R for an analyte is $> 120\%$, qualify sample results \geq MDL as estimated (J) and non-detects should not be qualified.
2. If the ICS AB %R for an analyte is $50-79\%$, qualify sample results that are \geq MDL as estimated (J) and non-detects as estimated (UJ).
3. If the ICS AB %R for an analyte is $<50\%$, qualify all sample results that are \geq MDL and all non-detects as as unusable (R).
4. If results \geq MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences and with analyte concentration that approximate those levels in the ICS A, sample results \geq MDL should be qualified as estimated (J) and non-detects should not be qualified.
5. If negative results with absolute values $>$ MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences, affected sample results $>$ MDL should be qualified as estimated (J) and non-detects (UJ).

Remarks:

All ICS results met control limits

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J115877

Analysis: Cyanide, Sulfide, Nitrate/Nitrite, Sulfate, Alkalinity

Method: 9012, 9034, 9056, 2320

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: No sample results were qualified

Some results were qualified as non-detect due to blank contamination

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No results were reanalyzed or diluted

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH ≥ 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH ≤ 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |

Actions:

1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

LCS %R met control limits

LEIDOS Laboratory Data Verification Checklist

Project: RVAAP Page 1 of 3

SDG No: J115950 VOCs, SVOCs, PAHs, Pesticides, PCBs, Explosives
Analyte Group: Metals/Mercury, Cyanide, Alkalinity

Sample Matrix: _____
EDD (Y/N): _____

Disposition of Data Package: _____
NCR No. (if applicable): _____

1. Case Narrative

| | |
|---|---|
| Read SDG Case Narrative | Y |
| Check Laboratory sample ID vs. Project sample ID lists | Y |
| Check that discussion covers each analytical type included in the SDG | Y |
| Check for identified nonconforming items (e.g., missed holding times, etc.) | Y |

2. Chain-of-Custody (COC)

| | |
|---|---|
| Check COC sample collection, shipping, and receiving dates | Y |
| Check that COC signature blocks are complete | Y |
| Check COC project sample IDs vs. Lab IDs and Result Form IDs | Y |
| Match COC requested analyses with Case Narrative and with data package content (Result Forms) | Y |

3. Analytical Results Form

| | |
|---|---|
| Verify that a Result Form is present for each sample and analysis | Y |
| On each Result Form check: | |
| SDG No. | Y |
| Sample ID | Y |
| Lab ID | Y |
| Date Collected | Y |
| Date Extracted | Y |
| Date Analyzed | Y |
| Result Matrix | Y |
| Result Units | Y |

4. Project Verification

| | |
|--|---|
| Check project analyte list vs. analytes reported | Y |
| Check project requested methods vs. analytical methods performed | Y |
| Check analyte reporting levels vs. project reporting level goals | Y |

5. Analytical Quality Control Information

| | |
|---|---|
| Check for surrogate recovery results (e.g., org. form II) | Y |
| Check for LCS results (e.g., org. form III, inorg. form XII) | Y |
| Check for method blank results (e.g., org. form IV, inorg. form III) | Y |
| Check for MS/MSD results (e.g., inorg. form V) | Y |
| Check for laboratory duplicate results (e.g., inorg. form VI) | Y |
| No laboratory duplicates performed; MS/MSDs were analyzed | |
| Check for Method Calibration and Run Documentation | |
| organic: instrument performance check | Y |
| initial calibration data | Y |
| continuing calibration data | Y |
| internal standard areas | Y |
| internal standard retention times | Y |
| sample clean-up documentation (org. forms V through X) | Y |
| metal: initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| method linear range | Y |
| sample run sequence (inorg. forms II, IV, and VIII through XIV) | Y |
| other: initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| sample run sequence | Y |

6. Incorrect Information

Identify missing items or incorrect information (i.e., missing forms, unsigned forms, incorrect sample IDs, etc.)

Contact the laboratory or project personnel to obtain missing information or correct information

Document corrections below:

7. Nonconforming Items

Document all nonconforming items that can not be resolved above in a Non-Conformance Report (NCR), complete form, file, and follow-up

| NCR # | Item |
|-------|-------|
| <hr/> | <hr/> |
| <hr/> | <hr/> |

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J115950

Analysis: VOCs

Laboratory: TestAmerica

Method: SW 8260B

Matrix: aqueous

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DOD QSM

All results estimated because analytical hold times were exceeded by one day.

Definition of Qualifiers:

"U", not detected at the associated level
"UJ", not detected and associated value estimated
"J", associated value estimated
"R", associated value unusable or analyte identity unfounded
"=", compound properly identified and value positive

Reviewed by: Joseph Peters

Date: 1/6/19

QA Reviewed by: _____

Date: _____

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: _____

All VOC samples analyzed on day late due to backlog as noted in case narrative; not documented in ADR

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: _____

No dilutions or reanalysis

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|---------------------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

All holding times exceeded by one day; not documented in ADR output. Qualify as estimated, A03

IV. System Monitoring Compounds (SMC) Recoveries (VOC, SVOC, Pesticides, PCBs)

List SMC compounds with unacceptable recoveries:

Note: SMC formerly known as surrogates.

Deviations:

| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks: _____

All surrogates within control limits; ADR confirmed

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
VOC internal standard retention times within ± 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
- 2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
- 3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
- 4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
- 5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

All internal standard area counts acceptable; ~~ADR confirmed~~ ADR DOES NOT EVALUATE; MANUALLY VALIDATED

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date:</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|--------------|-----------------|-----------------|-----------------|--------------------|

| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: No MB contamination; ADR & data package confirmed

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If gross contamination exists in blanks (i.e., saturated peaks by GC/ MS), all affected compounds in the associated samples should be qualified as unusable (R) due to interference.
5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks: _____

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB/ DFTPP) Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: 10/29/18
 VOC - Date(s) of continuing calibration: 11/5/18 11/6/18
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks:

All initial and continuing calibration criteria met TARGET COMPOUNDS

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

Linearity evaluation, are %RSD <20? NA Yes or No

Is the RPD between calibration factors \leq 25? Yes or No

Are multicomponent calibration data provided for each analysis date? Yes or No

Is the difference between columns check \leq 25%D? Yes or No

Are 4, 4'- DDT and endrin breakdown (PEM) \leq 20% and combined breakdown \leq 30% Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
 And non-detects should be rejected (R).

Remarks: _____

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:
percent recovery (%R)
relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: NONE

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks: _____

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| VOC | SVOC | Pest | PCB |
|--------|--------|--------|--------|
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications:

LCS 280-436416/5

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

All recovery criteria met; ADR confirmed

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J115950

Analysis: SVOCs, PAHs

Laboratory: TestAmerica

Method: SW 8270D, 8270D-SIM

Matrix: aqueous

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DOD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Joseph Peters

QA Reviewed by: _____

Date: _____

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No discrepancies noted.

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No dilutions/re-analysis required.

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|----------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |

| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

Holding times were met; ADR confirmed

IV. System Monitoring Compounds (SMC) Recoveries (VOC, SVOC, Pesticides, PCBs)

List SMC compounds with unacceptable recoveries:

Note: SMC formerly known as surrogates.

Deviations:

| Sample # | VOC | | | SVOC B/N Compounds | | | SVOC Acid Compounds | | | Pest | PCB |
|----------|-----|-----|-----|-----------------------|-----|-----|------------------------|-----|-----|------|-----|
| | TOL | BFB | DCE | NBZ | FBP | TPH | PHL | 2FP | TBP | TCX | DCB |

| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

- 1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
- 2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
- 3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
- 4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
- 5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
- 6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
- 7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks:

Surrogates were within control limits. ADR confirmed

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
VOC internal standard retention times within ± 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

Internal standard area counts were within control limits. ~~ADR confirmed.~~ ADR DOES NOT EVALUATE; MANUALLY VALIDATED

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| Date | Lab ID # | Fraction | Compound | Conc. (ppb) |
|------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Remarks: Method blanks free from contamination; ADR confirmed.

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If gross contamination exists in blanks (i.e., saturated peaks by GC/ MS), all affected compounds in the associated samples should be qualified as unusable (R) due to interference.
5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP) Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: 10/23/18 10/29/18
 SVOC - Date(s) of continuing calibration: 10/29/18 10/30/18
 Was the 12 hour criteria met? Y or N Y

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks:

_____ All initial and continuing calibration criteria were met _____

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

Linearity evaluation, are %RSD <20? NA Yes or No

Is the RPD between calibration factors ≤ 25 ? Yes or No

Are multicomponent calibration data provided for each analysis date? Yes or No

Is the difference between columns check $\leq 25\%D$? Yes or No

Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$ Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks:

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS 280-434912/2-A, LCSD 280-434912/3-A
LCS 280-434941/2-A LCSD 280-434941/3-A

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |

| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

All LCS/LCSD recovery and RPD values within control limits; ADR confirmed

LEIDOS
GC and LC Organic Data Review Checklist
(Explosives, PAHs, Herbicides, GRO/DRO, Methanol, etc.)

Project: RVAAP

Page 1 of 9

SDG No: J115950

Analysis: Explosives

Method: SW 8330B

Laboratory: TestAmerica

Matrix: Aqueous

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | MS/MSD Recoveries and Differences |
| Sample Preservation | LCS Recoveries |
| Method Calibration | Re-analysis and Secondary Dilution |
| Method and Project Blanks | |

Overall Remarks: DOD QSM

Sample results were qualified J/UJ in sample RQLmw-008-181001-GW due to low surrogate. RDX was estimated (J) in the same sample due to column comparison RPDs exceeding 40%.

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Joseph Peters

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks:

The %RPD between the primary and confirmation column exceeded 40% for 2-Amino-4,6-dinitrotoluene, 2,6-Dinitrotoluene and RDX for the following samples: LL1mw-064-181001-GW (280-115950-1), LL1mw-088-181001-GW (280-115950-2), LL1mw-088-181002-GW (280-115950-3), RQLmw-007-181001-GW (280-115950-4) and RQLmw-008-181001-GW (280-115950-5). Both values have been reported and qualified in accordance with the laboratory's SOP.

The above column comparison RPDs are not part of the ADR output. The above compounds were not reported in the samples with the exception of HMX and RDX in sample 115950-5 (RQLmw-008-181001-GW). The raw data were examined for all samples and it was determined that the samples were reported correctly and the case narrative was incorrect. The lab will need to revise the case narrative.

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks:

IV. Initial & Continuing Calibration

A blank and five standards should be analyzed, with one of the standards being within 2X the MDL

Correlation coefficients must be ≥ 0.995

The RSD of the calibration factor or the relative response factor (RRF) must be $\leq 20\%$ $\leq 15\%$

Continuing calibration %D must be within $\pm 15\%$ $\pm 20\%$

Deviations: column

| Compound | Correlation Coefficient | date/time % RSD | %D | Samples Affected |
|----------|-------------------------|--------------------|-------|--|
| Tetryl | column 2 | 10/27/02:02 | +21.6 | None; samples ND, CCV bias high; column 1 OK |
| ↓ | column 2 | 10/27/06:38 | +21.0 | ↓ |
| ↓ | column 2 | 10/27/10:27 | +20.1 | ↓ |

V. Surrogate Recoveries

List surrogate compounds with unacceptable recoveries:

Deviations:

| Sample # | Surrogate ID | % R | QC Limits | Samples Affected |
|------------------|---------------------|-----|-----------|--------------------------|
| RQLmw-008-181001 | 1-GW 12DNB; column2 | 81 | 83-119 | listed sample; J/UJ G02* |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any surrogate recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any surrogate recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If surrogate recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If surrogate recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
6. Use professional judgement to qualify results when surrogate recoveries have been diluted out of spec.

Remarks:

*Although column 1 was within control for surrogate recovery, the low surrogate recovery and the RDX RPD between columns indicate that matrix interference is present, so professional judgment was used and the results were estimated based on the low surrogate recovery on column 2.

VI. Blanks

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any surrogate recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any surrogate recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If surrogate recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If surrogate recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
6. Use professional judgement to qualify results when surrogate recoveries have been diluted out of spec.

Remarks:

All surrogates were within control limits; ADR confirmed

VI. Blanks

Review associated laboratory and project blank samples. List documented contamination below:

VI. Blanks (continued)

Calculate action levels based on 5X the highest blank concentration of any given compound
Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

VII. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

percent recovery (%R)
relative percent difference (RPD)

| | |
|--------------|---------------|
| VOC types | SVOC types |
| 70-130 | 45-135 |
| <30 | <50 |

Project Sample(s) Spiked: None

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|--------------|-----|---------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is outside limits, qualify all positive values in the unspiked sample as estimated (J)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
4. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
5. Use professional judgement for qualification of data for unspiked compounds

Remarks: _____

VIII. Laboratory Control Sample Information

General LCS Criteria:

percent recovery (%R)

| | |
|-----------|------------|
| VOC types | SVOC types |
| 80-120 | 60-120 |

Laboratory LCS Identifications:

LCS 280-434851/4-A, LCSD 280-434851/5-A

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

LCS/LCSD recovery and RPD values within control limits; ADR confirmed

LEIDOS
Metals Data Review Checklist

Project: RVAAP

Page 1 of 14

SDG No: J115950

Analysis: Metals/Mercury

Method: 6010C/6020A/7470A

Laboratory: TestAmerica

Matrix: Aqueous

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|---|
| Case Narrative | MS/MSD Recoveries and Differences |
| Analytical Holding Times | Duplicate Relative Percent Differences |
| Sample Preservation | ICP Serial Dilution |
| Method Calibration | Furnace Atomic Absorption QC |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| LCS Recoveries | Internal Standard Performance (if applicable) |

Project specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall remarks: DOD QSM

One beryllium result estimated (J) due to high low level standard recovery

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Joseph Peters

Date: 1/9/18

QA Reviewed by: _____

Date: _____

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No discrepancies noted

 Although not required for data validation, a field duplicate was analyzed for ICP and ICPMS metals and the ADR output
 showed the results were in good agreement. The only instances where the RPD exceeded 50% was when the results were below the
 LOQ.

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No re-analysis or dilutions performed or required

III. Holding Times

Metals - Waters - preserved to pH<2, 180 days from sample collection
 Metals - Soils - 180 days from sample collection
 Mercury - Waters - preserved to pH<2, 28 days from sample collection
 Mercury - Soils - 28 days from sample collection

Deviations:

| Sample # | Metals | | | | Mercury | | | |
|----------|----------------|---------------|----------|----------|----------------|---------------|----------|----------|
| | Date Collected | Date Analyzed | Days >HT | pH Check | Date Collected | Date Analyzed | Days >HT | pH Check |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If preserved samples exceed holding time, qualify all associated results as estimated (J/UJ).
2. If unpreserved samples exceed holding time, qualify all associated results as unusable (R).
3. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
4. If water samples are not acidified, use professional judgement. Minimally, qualify data as estimated (J) and non-detects unusable (R).
5. If soil samples exceed holding time, use professional judgement to qualify data.

Remarks:

All holding times were met

IV. Initial & Continging Calibration (ICP, GFAA, CVAA, etc.)

Initial calibration linearity criteria is $r \geq 0.995$

ICV and CCV criteria are $\pm 10\%$ recovery, low level check standard allowed $\pm 30\%$

ICP inter-element check standard criteria $\pm 20\%$

Deviations:

| Element | Date | Intial Calib. | ICV/ CCV | %R | Samples Affected |
|----------------------|------|---------------|----------|-----|--|
| Cr; 11/2@19:01, CCVL | | | | 78 | None |
| Be, 11/3@00:17, CCVL | | | | 128 | Associated Be results within 2X the LOQ, J D04 * |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any elements initial claibration linearity is <0.995 , qualify the data as estimated (J/UJ)
2. If any elements initial claibration linearity is <0.95 , qualify the data as unusable (R)
- 3a. If any elements ICV or CCV recovery is $<90\%$, qualify the data as estimated (J/UJ)
- 3b. If any elements ICV or CCV recovery is $> 110\%$, qualify results \geq MDL as estimated (J).
Do not qualify non-detects.
- 4a. If any elements ICV or CCV recovery is $<75\%$, qualify the data as unusable (R)
- 4b. If any elements ICV or CCV recovery is $> 125\%$ qualify positive results as estimated (J) or non-detects as unusable (R).
- 4c. If any element ICV or CCV recovery is $\geq 160\%$, qualify positive results \geq MDL as unusable (R).
Do not qualify non-detects.
- 5a. If any elements CRI recovery is 50 - 69% (30 - 49% for Sb, Pb, Tb), qualify results \geq MDL (but < 2 times CRQL) as estimated (J/UJ) and results > 2 times CRQL are not qualified.
- 5b. If any elements CRI recovery is $< 50\%$ ($<30\%$ for Sb, Pb, Ti), qualify results \geq MDL (but < 2 times CRQL) and non-detects as unusable (R). Results > 2 times CRQL are estimated (J).
- 5c. If any elements CRI recovery is $> 130\%$ but $< 180\%$ ($>150\%$ but $\leq 200\%$ for Sb, Pb, Ti), qualify results \geq MDL (but < 2 times CRQL) as esimated (J). And non-detects and results $\geq 2x$ CRQL are not qualified.
- 5d. If CRI or (R) $> 180\%$ ($> 200\%$ for Sb, Pb, Ti), qualify results that are \geq MDL as unusable (R).

Remarks:

Professional judgment was used and the CCVL was treated like a CLP CRDL standard and used 80-120% recovery. Used 90-110% for other CCVs. *Be results near the LOQ are estimated since the CCVL shows potential potitive bias at the LOQ; the CCVs were acceptable for Be, indicating to bias at higher levels

IV. Initial & Contining Calibration (ICP, GFAA, CVAA, etc.) (continued)

Analytical Sequence and MS Tune

(Y/N)

- 1. Were the appropriate number of ICP standards used? y
- 2. Were the appropriate number of AA standards used? y
- 3. Was calibration performed and documented at the beginning of each run? y
- 4. Were calibration check standards run at 10% frequency or every two hours? y
- 5. Were low level standard checks analyzed at approximately 2X the PQL? y
- 6. Was ICP-MS mass calibration within 0.1 AMU? y
- 7. Was ICP-MS % RSD of the aboslute signals for all analytes < 5%?

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

- 1. If instrument calibration is questionable, use professional judgement, qualify the data as estimated (J/UJ)
- 2. If instrument calibration documentation can not be obtained or is inadequate, qualify the data as unusable (R)
- 3. If mass calibration for ICP-MS was not within 0.1 AMU qualify analyte results as estimated (J/UJ)
- 4. If % RSD for ICP-MS was > 5% for any analyte in the tuning solution, qualify associated results as estimated (J/UJ).

Results:

V. Blanks (ICB, CCB, Method Blank, Equipment Rinsate Blank)**A. Blank Results**

If the blank level is > CRQL for any analyte, check that the analyte's concentration in the samples is > 10 times the blank value. The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account when applying the action level.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times \text{V/W} \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|--------------------|-----------|---------------------|--------------|---------------------------------|
| ICB 11/2@16:11 | Vanadium | 1.11 ug/L | 11.1 | None; samples non-detect |
| MB | Calcium | 54.2 ug/L | 542 | None; results > action level |
| MB | Manganese | 0.624 ug/L | 6.24 | None; results > action level |
| CCB 280-436227/52 | Sb | 0.483 | 4.83 | QUAL DETECTS < 4.8 AS U F06/F07 |
| CCB 280-436227/114 | Sb | 0.448 | 4.48 | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

If additional space is required, use next page

Actions:

1. For blank results \geq MDL but \leq CRQL, qualify samples \geq MDL but < CRQL as CRQL U.

Use professional judgement to qualify sample results exceeding the CRQL.

2a. If blank results are > CRQL: For sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values > CRQL but < 10 times the blank qualify results as unusable (R) or estimated (J). No action is taken for sample results \geq 10 times the blank levels.

2b. If ICB/ CCB results are > CRQL; for sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values > CRQL but < blank results, qualify results as not detected (U) at the level of the blank or unusable (R). Use professional judgement for sample results > blank results.

Remarks:

V. Blanks (continued)

The highest blank concentration of observed elements is the action level.
Sample weights, volumes, and dilution factors must be taken into account.
Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.
use the following equation:

$$\text{ug/L} \times V/W \times 1L/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)
W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|----------|---------|---------------------|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

V. Blanks (continued)

B. Frequency Requirements

(Y/N)

- 1. Was a method (preparation) blank analyzed for each matrix? y
- 2. Was a method blank processed for every analytical batch (20 samples)? y
- 3. Was a calibration blank analyzed at 10% frequency or every two hours? y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Remarks: _____

C. Baseline Shift Evaluation

List the highest negative blank concentration for each analyte observed in laboratory or project blanks.

Deviations:

| Blank ID | Element | Max. Neg Conc. | Action Level | Samples Affected |
|----------|---------|-------------------|-----------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If the absolute value of the maximum negative blank result is > the CRQL, qualify positive results as estimated (J) and non-detects as estimated (UJ).

Remarks: _____

VI. Laboratory Control Sample Evaluation

All LCS recovery criteria are set at 80-120%

An LCS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Deviations:

| Element | Date | %R | Matrix | Samples Affected |
|---------|------|----|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any element's LCS recovery is >120%, qualify positive results as (J).
2. If any element's LCS recovery is 50-79%, qualify positive results as (J) and non-detect results as (UJ)
- 3a. If any element's LCS recovery is <50%, qualify positive results as (J) and non-detect results as (R)
- 3b. If the LCS recovery is > 150%, qualify all results as unusable (R).
4. For soil LCS recovery > upper limit, qualify samples results \geq MDL as estimated (J).
5. For soil LCS recovery < lower limit, qualify results \geq MDL as esimated (J) and non-detected estimated (UJ).
6. Use professional judgement to qualify data if the LCS frequency criteria are not met.

Remarks:

No outliers; ADR confirmed

VII. Matrix Spike Evaluation

All MS recovery criteria are set at 75-125%

An MS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Verify that a field blank or PE sample was not used for spiked sample analysis

Verify that a post-digestion spike was analyzed for those analytes where the pre-digestion spike recovery is outside control limits and the sample result is < 4 times the spike added.

Project Sample(s) Spiked: LL1mw-088-181001-GW

Deviations:

| Element | Spiked Sample Result | Sample Result | Spike Amount | %R | Samples Affected |
|---------|----------------------|---------------|--------------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the sample concentration exceeds the spiking level by a factor of 4X or more, do not qualify the data
2. If the spike recovery is >125%, qualify all positive values as (J).
3. If the spike recovery is between 30-74%, qualify positive values as (J) and non-detect values as estimated (UJ)
4. If the spike recovery is <30%, qualify positive values as (J) and non-detects are qualified unusable (R) if the post-digestion spike recovery is < 75% (or none was performed); non-detects are qualified as estimated (UJ) If the post-digestion spike recovery is ≥ 75%. There is no post-digestion spike performed for mercury.
5. Qualify all samples of similar matrix to the spiked sample in the same manner
6. Use professional judgement to qualify data if the MS frequency criteria are not met.
7. Use professional judgement for qualification of data for unspiked elements

Remarks:

No outliers, ADR confirmed

VIII. Laboratory Duplicate Evaluation

Duplicate relative percent difference (RPD) for water is 20% (both results > 5 times CDRL) or < CRDL difference (if either result is < 5 times CRDL) and RPD for soil is 35% (if both results are > 5 times CRDL or < 2 times CRDL if either result is < 5 times CRDL).

When duplicate sample values are both less than the reporting level they are considered acceptable

When duplicate sample values are within 5X the reporting level they are acceptable if their absolute difference is within 3X the reporting level

Verify that a field blank on PE sample was not used for duplicate analysis.

Deviations: No laboratory duplicates analyzed. MS/MSD performed for ICPMS metals LCS/LCSD evaluated for precision on other metals.

| Element | Sample # | Duplicate # | RPD | Samples Affected |
|---------|----------|-------------|-----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

- Actions:**
1. If an element's RPD is >20% (water) / >35% (soil), qualify positive results as (J) and non-detect results as (UJ)
 2. For low concentrations, if an element's duplicate absolute difference is > 3X the reporting level, qualify positive results as (J) and non-detect results as (UJ)
 3. Use professional judgement to qualify data if the duplicate frequency criteria are not met.

Remarks: _____

IX. Inductively Coupled Plasma (ICP) Serial Dilution Analysis

Verify that a field blank or PE sample was not used for serial dilution.

Serial dilution of positive results are performed when values exceed 50X the IDL

Results from serial dilutions should agree within 10% of the original undiluted analysis

Deviations:

| Element | Sample # | Sample Result | Serial Dilution | %D | Action |
|---------|----------|---------------|-----------------|----|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the serial dilution %D is >10 and the analyte results are >50X the IDL, qualify all positive results as estimated (J) and non-detects as estimated (UJ).

Remarks:

Serial dilution results acceptable

X. Furnace Atomic Absorption QC**A. Duplicate Precision**

(Y/N)

1. Were duplicate injections performed for all samples? _____
2. Were one point analytical spikes performed for all samples? _____
3. Did duplicate injections agree within $\pm 20\%$? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If duplicate injection results are outside $\pm 20\%$, qualify positive results as (J) and non-detect results as (UJ)

Remarks:

B. Post Digestion Spike Recoveries

(Y/N)

1. Did post digestion spike recoveries meet an 85-115% recovery criteria? _____
2. If spike recoveries did not meet recovery criteria were samples analyzed by MSA? _____
3. If MSA was used to analyze samples, was its' correlation coefficient ≥ 0.995 ? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If post digestion spike recoveries are $>115\%$, qualify positive results as (J) and non-detect results as (U)
2. If post digestion spike recoveries are 11-84%, qualify positive results as (J) and non-detect results as (UJ)
3. If post digestion spike recoveries are $<10\%$, qualify positive results as (R) and non-detect results as (R)
4. If MSA was used to quantitate values and the correlation coefficient was <0.995 , qualify data as (J or UJ)
5. If MSA was used to quantitate values and the correlation coefficient was <0.95 , qualify data as (R)

Remarks:

_____ NA _____

XI. Inductively Coupled Plasma (ICP) Interference Check Sample Evaluation

Interference check samples should be analyzed at the beginning and end of each analysis run, or at a minimum of twice per 8 hour working shift.

Results for the ICS solution AB must fall within control limits of 20% for analytes included in the solution. Evaluate the ICS A solution raw data for results with an absolute value \geq MDL for analytes that are not present in the ICS A solution.

Deviations:

| Element | Sample # | Sample Result | Interferent Result | Action |
|---------|----------|---------------|--------------------|--------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If the ICS AB %R for an analyte is > 120%, qualify sample results \geq MDL as estimated (J) and non-detects should not be qualified.
2. If the ICS AB %R for an analyte is 50-79%, qualify sample results that are \geq MDL as estimated (J) and non-detects as estimated (UJ).
3. If the ICS AB %R for an analyte is <50%, qualify all sample results that are \geq MDL and all non-detects as unusable (R).
4. If results \geq MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferents and with analyte concentration that approximate those levels in the ICS A, sample results \geq MDL should be qualified as estimated (J) and non-detects should not be qualified.
5. If negative results with absolute values > MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferents, affected sample results > MDL should be qualified as estimated (J) and non-detects (UJ).

Remarks:

All ICS results met control limits

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J115950

Analysis: Alkalinity, Cyanide

Laboratory: TestAmerica

Method: 2320B, 9012B

Matrix: Aqueous

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: QAPP and Lab guidance/limits

No sample results were qualified.

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Joseph C Peters

Date: 1/9/18

QA Reviewed by: _____

Date: _____

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No discrepancies noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No re-analysis or dilutions required or performed

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH \geq 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH \leq 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |
|----------|---------|----------------|----------------|---------------|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks:

All holding times met; ADR confirmed

IV. Initial & Continuing Calibration

A blank and at least three standards should be analyzed, with one of the standards being within 2X the MDL

Correlation coefficients must be ≥ 0.995

Initial calibration check recoveries must be within 90-110%

Continuing calibration check recoveries must be within 85-115%

Deviations:

| Compound | Correlation Coefficient | ICV/CCV | %R | Samples Affected |
|----------|-------------------------|---------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any compounds initial calibration linearity is < 0.995 , qualify the data as estimated (J/UJ)
- 2. If any compounds initial calibration linearity is < 0.95 , qualify the data as unusable (R)
- 3. If ICV or CCV criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 4. If ICV or CCV recoveries fall below 50%, qualify results as unusable (R)

Remarks:

All initial and continuing calibration criteria met

V. Blanks (Method Blanks and Project Blanks)

An analytical method blank must be analyzed with each batch of samples
 Calculate action levels based on 5X the highest blank concentration of any given analyte
 Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Analyte | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|---------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If analyte results exceed the action levels, the data are not qualified
2. If analyte results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the analyte is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

No method blank or ICB/CCB detections

VI. Laboratory Control Sample Information

Each analyte's LCS % recovery must be within the control limits established by the laboratory
 In general LCS % recoveries should all be within 85-115%

Deviations:

| Analyte | Date | %R | Samples Affected/Qualifiers Applied |
|---------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
- 2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
- 3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
- 4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

LCS was within control limits; ADR and data package confirmed

VII. Matrix Spike Information

NA; no project samples spiked with this SDG

Each analyte's Matrix Spike % recovery should be within the laboratory established control limits
 In general matrix spike % recoveries should all be within 75-125%

Deviations:

| Analyte | %R | %R Limits | Samples Affected |
|---------|----|-----------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the spike recovery is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
- 2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
- 3. Use professional judgement to qualify additional samples in the analytical group based on MS results
- 4. Use professional judgement for qualification of data for unspiked analytes

Remarks:

VIII. Laboratory Duplicate Information

Each analyte's RPD should be within the laboratory established control limits
 In general RPDs should all be within 20%

NA; no laboratory duplicates analyzed with this SDG

Deviations:

| Analyte | RPD | RPD Limits | Samples Affected |
|---------|-----|------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the RPD is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
2. Use professional judgement to qualify additional samples in the analytical group based on RPD results
3. Use professional judgement for qualification of data when laboratory duplicates were not analyzed

TestAmerica Denver

Client Sample Results

Client: Leidos, Inc.
Project/Site: Leidos RFP# 001088 - Ravenna AAP-66

TestAmerica Job ID: 280-115950-1

Method: 8330B - Nitroaromatics and Nitramines (HPLC) (Continued)

All results qualified J/UJ, G02 due to low surrogate in this sample; RDX qualified J due to column RPD > 40%; Both RDX results reported; higher result should be used

Client Sample ID: RQLmw-008-181001-GW

Data Review Summary

Lab Reporting Batch ID: 280-115950-1

Laboratory: TA DEN

EDD Filename: 280-115950-1

eQAPP Name: Leidos-RVAAP NACA_20181218 -

Validation Area

Note

| Validation Area | Note |
|---|--|
| Technical Holding Times | NOTE: ADR did not report or qualify missed VOC hold time |
| Temperature | A |
| Initial Calibration | N |
| Continuing Calibration/Initial Calibration Verification | N |
| Method Blanks | SR |
| Surrogate/Tracer Spikes | A |
| Matrix Spike/Matrix Spike Duplicates | A |
| Laboratory Duplicates | N |
| Laboratory Replicates | N |
| Laboratory Control Samples | SR |
| Compound Quantitation | SR |
| Field Duplicates | A |
| Field Triplicates | N |
| Field Blanks | N |

A = Acceptable, N = Not provided/applicable, SR = See report

The contents of this report reflect findings made by ADR during Automated Data Review, manual applied qualifiers are not considered. Please refer to the Overall Qualifier Summary report for manual qualifiers.

LEIDOS

Laboratory Data Verification Checklist

Project: RVAAP

Page 1 of 3

SDG No: J116020

Analyte Group: VOC, SVOC, Pest/PCB, Explosives, Metals, wet Chem

Sample Matrix: Water

EDD (Y/N): _____

Disposition of Data Package: _____

NCR No. (if applicable): _____

1. Case Narrative

Read SDG Case Narrative Y

Check Laboratory sample ID vs. Project sample ID lists Y

Check that discussion covers each analytical type included in the SDG Y

Check for identified nonconforming items (e.g., missed holding times, etc.) Y

2. Chain-of-Custody (COC)

Check COC sample collection, shipping, and receiving dates Y

Check that COC signature blocks are complete Y

Check COC project sample IDs vs. Lab IDs and Result Form IDs Y

Match COC requested analyses with Case Narrative and with data package content (Result Forms) Y

3. Analytical Results Form

Verify that a Result Form is present for each sample and analysis Y

On each Result Form check:

SDG No. Y

Sample ID Y

Lab ID Y

Date Collected Y

Date Extracted Y

Date Analyzed Y

Result Matrix Y

Result Units Y

4. Project Verification

| | |
|--|---|
| Check project analyte list vs. analytes reported | Y |
| Check project requested methods vs. analytical methods performed | Y |
| Check analyte reporting levels vs. project reporting level goals | Y |

5. Analytical Quality Control Information

| | |
|---|---|
| Check for surrogate recovery results (e.g., org. form II) | Y |
| Check for LCS results (e.g., org. form III, inorg. form XII) | Y |
| Check for method blank results (e.g., org. form IV, inorg. form III) | Y |
| Check for MS/MSD results (e.g., inorg. form V) | Y |
| Check for laboratory duplicate results (e.g., inorg. form VI) | Y |
| Check for Method Calibration and Run Documentation | |
| organic: | |
| instrument performance check | Y |
| initial calibration data | Y |
| continuing calibration data | Y |
| internal standard areas | Y |
| internal standard retention times | Y |
| sample clean-up documentation (org. forms V through X) | Y |
| metal: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| method linear range | Y |
| sample run sequence (inorg. forms II, IV, and VIII through XIV) | Y |
| other: | |
| initial calibration data | Y |
| continuing calibration data | Y |

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116020

Analysis: VOC

Laboratory: Test America

Method: 8260B

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

Results were qualified as estimated due to missed holding time

Definition of Qualifiers:

"U", not detected at the associated level
"UJ", not detected and associated value estimated
"J", associated value estimated
"R", associated value unusable or analyte identity unfounded
"=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 12/27/18

QA Reviewed by: Richard Stach

Date: 01/04/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|-------------------|----------------|---------------|--|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |
| DET-003-181001-GW | 10/24/18 | 11/14/18 | HT + 7 DAYS (<2x HT, RESULTS QUALIFIED J / UJ) | | | | | |
| DET-003-181002-GW | ↓ | ↓ | ↓ | | | | | |
| FWGTB-181002-TB | | | | | | | | |
| DET-004-181001-GW | ↓ | ↓ | ↓ | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

- 1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
- 2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

ADR did not qualify for missed holding times, see Form 1's

SAMPLES ALSO HAD HEADSPACE. PER NARRATIVE "The following volatile samples in analytical batch 280-437463 were analyzed with significant headspace in the sample containers:
 DET-003-181001-GW (280-116020-1), DET-003-181001-GW (280-116020-1[MS]), DET-003-181001-GW (280-116020-1[MSD]),
 DET-003-181002-GW (280-116020-2) and DET-004-181001-GW (280-116020-12). Significant headspace is defined as a bubble greater than 6 mm in diameter."

IV. System Monitoring Compounds (SMC) Recoveries (VOC, SVOC, Pesticides, PCBs)

List SMC compounds with unacceptable recoveries:

Note: SMC formerly known as surrogates.

Deviations:

| Sample # | VOC | | | SVOC B/N Compounds | | | SVOC Acid Compounds | | | Pest | PCB |
|----------|-----|-----|-----|-----------------------|-----|-----|------------------------|-----|-----|------|-----|
| | TOL | BFB | DCE | NBZ | FBP | TPH | PHL | 2FP | TBP | TCX | DCB |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks: All surrogates met control limits

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
 VOC internal standard retention times within \pm 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
 SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date:</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|--------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: MB and TB were free from contamination

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If compound results exceed the action levels, the data are not qualified
- 2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
- 3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
- 4. If gross contamination exists in blanks (i.e., saturated peaks by GC/ MS), all affected compounds in the associated samles should be qualified as unusable (R) due to interference.
- 5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB) DFTPP) Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: 9/28 10/29
 VOC - Date(s) of continuing calibration: 11/13
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: Calibration results met control limits for target analytes

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

Linearity evaluation, are %RSD <20? Yes or No

Is the RPD between calibration factors ≤ 25 ? Yes or No

Are multicomponent calibration data provided for each analysis date? Yes or No

Is the difference between columns check $\leq 25\%D$? Yes or No

Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$ Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks:

NA

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:
percent recovery (%R)
relative percent difference (RPD)

| VOC | SVOC | Pest | PCB |
|--------|--------|--------|--------|
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: DET-003-181001-GW

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
- 2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
- 3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
- 4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
- 5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
- 6. Use professional judgement for qualification of data for unspiked compounds

Remarks: MS/MSD %R and RPD met control limits

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS 280-437463

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

- 1. If the LCS recovery is below limits but > one- half the lower limit, qualify valves as estimated (J/UJ).
- 2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
- 3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
- 4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
- 5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: All LCS %R met control limits

| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

- 1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
- 2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
- 3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
- 4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
- 5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
- 6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
- 7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks: See ADR output for PAH discrepancies

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
VOC internal standard retention times within ± 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

All IS results met control limits

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date:</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|--------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: See ADR for PAH contamination

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If compound results exceed the action levels, the data are not qualified
- 2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
- 3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
- 4. If gross contamination exists in blanks (i.e., saturated peaks by GC/ MS), all affected compounds in the associated samles should be qualifed as unusable (R) due to interference.
- 5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: 10/17/18 10/29/18 11/7/18
 SVOC - Date(s) of continuing calibration: 11/7/18 11/1/18 11/8/18
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: All calibration results met control limits

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:
 percent recovery (%R)
 relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: DET-003-181001-GW

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------------|----|-----------|-----|------------|-------------------------------|
| 2-chlorophenol | | | 44% | | DET-003-181001-GW ND, no qual |
| 2-methylphenol | | | 27% | | |
| 2-nitrophenol | | | 27% | | |
| nitrobenzene | | | 32% | | |
| phenol | | | 35% | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks: See ADR output for MSD RPD discrepancies

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS 280-435328

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

- 1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
- 2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
- 3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
- 4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
- 5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: LCS %R results met control limits

LEIDOS Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116020

Analysis: Pesticides/PCB

Laboratory: Test America

Method: 8081/8082

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 12/27/18

QA Reviewed by: Richard Stach

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

PCBs

The following samples required a sulfuric acid clean-up, via EPA Method 3665A, to reduce matrix interferences: DET-003-181001-GW (280-116020-1), DET-003-181002-GW (280-116020-2), DET-004-181001-GW (280-116020-12), (LCS 280-435616/4-A), (LCSD 280-435616/5-A) and (MB 280-435616/1-A). Acid Lot: 161554

The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur: DET-003-181001-GW (280-116020-1), DET-003-181002-GW (280-116020-2), DET-004-181001-GW (280-116020-12), (LCS 280-435616/4-A), (LCSD 280-435616/5-A) and (MB 280-435616/1-A).

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|----------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |

| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks: All holding times were met

IV. System Monitoring Compounds (SMC) Recoveries (VOC, SVOC, Pesticides, PCBs)

List SMC compounds with unacceptable recoveries:

Note: SMC formerly known as surrogates.

Deviations:

| Sample # | VOC | | | SVOC B/N Compounds | | | SVOC Acid Compounds | | | Pest | PCB |
|----------|-----|-----|-----|-----------------------|-----|-----|------------------------|-----|-----|------|-----|
| | TOL | BFB | DCE | NBZ | FBP | TPH | PHL | 2FP | TBP | TCX | DCB |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks:

Surrogates met control limits

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
 VOC internal standard retention times within \pm 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
 SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

~~All IS results met control limits~~

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|----------|----------|----------|-------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| Date | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|----------|----------|----------|-------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: MBs were free from contamination

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP) Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: NA

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

- Linearity evaluation, are %RSD <20? Yes or No
- Is the RPD between calibration factors ≤ 25 ? Yes or No
- Are multicomponent calibration data provided for each analysis date? Yes or No
- Is the difference between columns check $\leq 25\%D$? Yes or No
- Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$ Yes or No

Deviations:

| | %D | | |
|---------------------|---------|-----|--|
| Compound | %RSD | RPD | Samples Affected |
| Toxaphene (Average) | - 32.56 | | ICV 10/13/18 All ND, no qual UJ C05 |
| Methoxychlor | 26.1 | | CCV 438138/37 All ND, no qual |
| Methoxychlor | 20.8 | | CCV 439676/27 All ND, no qual |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks:

The average %D for CCVs were calculated for validation

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:
 percent recovery (%R)
 relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
- 2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
- 3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
- 4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
- 5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
- 6. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS/D 280-435616

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

- 1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
- 2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
- 3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
- 4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
- 5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

See ADR output for discrepancies

LEIDOS
GC and LC Organic Data Review Checklist
(Explosives, PAHs, Herbicides, GRO/DRO, Methanol, etc.)

Project: RVAAP

Page 1 of 9

SDG No: J116020

Analysis: Explosives

Method: 8330B

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | MS/MSD Recoveries and Differences |
| Sample Preservation | LCS Recoveries |
| Method Calibration | Re-analysis and Secondary Dilution |
| Method and Project Blanks | |

Overall Remarks: DoD QSM

Some results were qualified as estimated due to surrogate and column comparison discrepancies

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

QA Reviewed by: Richard Stach

Date: 01/04/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: Column comparison discrepancies were not listed in ADR

The %RPD between the primary and confirmation column exceeded 40% for HMX and RDX in sample LL1mw-083-181001-GW (280-116020-5) and for HMX, RDX and 1,3-Dinitrobenzene in sample LL1mw-084-181001-GW (280-116020-6). Both values been reported and qualified in accordance with the laboratory's SOP.

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: One sample was reanalyzed due to surrogates outside control limits, the reanalysis was not reported

IV. Initial & Continuing Calibration

A blank and five standards should be analyzed, with one of the standards being within 2X the MDL

Correlation coefficients must be ≥ 0.995

The RSD of the calibration factor or the relative response factor (RRF) must be $\leq 20\%$

Continuing calibration %D must be within $\pm 15\%$

Deviations:

| Compound | Correlation Coefficient | % RSD | %D | Samples Affected |
|----------|-------------------------|-------|------|----------------------------------|
| Tetryl | | | 21.1 | CCV 435517/12 All ND, no qual |
| Tetryl | | | 21.7 | CCV 435517/24 All ND, no qual |
| Tetryl | | | 22 | CCV 435517/34 All ND, no qual |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any compounds initial calibration linearity is <0.995 , qualify the data as estimated (J/UJ)
2. If any compounds initial calibration linearity is <0.95 , qualify the data as unusable (R)
3. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)

Remarks:

V. Surrogate Recoveries

List surrogate compounds with unacceptable recoveries:

Deviations:

| Sample # | Surrogate ID | % R | QC Limits | Samples Affected |
|----------|--------------|-----|-----------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any surrogate recovery is <10%, qualify all positive results in associated fractions as estimated (J)
- 2. If any surrogate recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
- 3. If surrogate recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
- 4. If surrogate recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
- 6. Use professional judgement to qualify results when surrogate recoveries have been diluted out of spec.

Remarks:

See ADR output for discrepancies

The recovery for surrogate 1,2-Dinitrobenzene failed the surrogate recovery criteria in sample WBGmw-009-181001-GW (280-116020-4) and in the method blank MB 280-435346/1-A and in the LCS 280-435346/2-A in analytical batch 280-435517. The LCS spike recoveries for several analytes were also outside control limits. Sample WBGmw-009-181001-GW (280-116020-4) was re-analyzed outside hold times. The surrogate in this sample and the rerun QC was in control. All target compounds were "Un-Detect" in both sample runs. Both sets of data are reported

NOTE: Sample, LCS and MB marginally < LCL (71, 78, 81; LCL 83)

VI. Blanks

Review associated laboratory and project blank samples. List documented contamination below:

VI. Blanks (continued)

Calculate action levels based on 5X the highest blank concentration of any given compound
Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

VII. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

| | |
|--------------|---------------|
| VOC types | SVOC types |
| 70-130 | 45-135 |
| <30 | <50 |

percent recovery (%R)

relative percent difference (RPD)

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|--------------|-----|---------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is outside limits, qualify all positive values in the unspiked sample as estimated (J)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
4. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
5. Use professional judgement for qualification of data for unspiked compounds

Remarks:

See ADR output for discrepancies

VIII. Laboratory Control Sample Information

General LCS Criteria:

percent recovery (%R)

| | |
|--------------|---------------|
| VOC types | SVOC types |
| 80-120 | 60-120 |

Laboratory LCS Identifications:

LCS 280-435346 LCS 280-435504 LCS 280-436019

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
- 2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
- 3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
- 4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

See ADR output for discrepancies

LEIDOS
Metals Data Review Checklist

Project: RVAAP

Page 1 of 14

SDG No: J116020

Analysis: Metals

Laboratory: Test America

Method: 6010, 6020, 7470

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|---|
| Case Narrative | MS/MSD Recoveries and Differences |
| Analytical Holding Times | Duplicate Relative Percent Differences |
| Sample Preservation | ICP Serial Dilution |
| Method Calibration | Furnace Atomic Absorption QC |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| LCS Recoveries | Internal Standard Performance (if applicable) |

Project specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall remarks: DoD QSM

Some results are qualified as estimated due to calibration and MS/MSD discrepancies

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by:

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

Metals - Waters - preserved to pH<2, 180 days from sample collection
 Metals - Soils - 180 days from sample collection
 Mercury - Waters - preserved to pH<2, 28 days from sample collection
 Mercury - Soils - 28 days from sample collection

Deviations:

| Sample # | Metals | | | | Mercury | | | |
|----------|----------------|---------------|----------|----------|----------------|---------------|----------|----------|
| | Date Collected | Date Analyzed | Days >HT | pH Check | Date Collected | Date Analyzed | Days >HT | pH Check |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If preserved samples exceed holding time, qualify all associated results as estimated (J/UJ).
2. If unpreserved samples exceed holding time, qualify all associated results as unusable (R).
3. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
4. If water samples are not acidified, use professional judgement. Minimally, qualify data as estimated (J) and non-detects unusable (R).
5. If soil samples exceed holding time, use professional judgement to qualify data.

Remarks:

Holding times were met

IV. Initial & Continging Calibration (ICP, GFAA, CVAA, etc.)

Initial calibration linearity criteria is $r \geq 0.995$

ICV and CCV criteria are $\pm 10\%$ recovery, low level check standard allowed $\pm 30\%$

ICP inter-element check standard criteria $\pm 20\%$

Deviations:

| Element | Date | Intial Calib. | ICV/CCV | %R | Samples Affected | |
|-----------|-------|---------------|---------|-----|------------------|--------------------------|
| Aluminum | 10/29 | | CCVL | 121 | 435360/83 | 116020-1, 4, 6, 8, 9, 12 |
| Calcium | 10/29 | | CCVL | 138 | 435360/97 | 116020-1, 4, 6, 8, 9, 12 |
| Caclium | 10/29 | | CCVL | 149 | | ↓ |
| Cadmium | 11/2 | | CCVL | 78 | 436227/53 | None |
| Manganese | 11/2 | | CCVL | 122 | 436227/74 | None |
| Barium | 11/2 | | CCVL | 79 | 436227/92 | 116020-1, 4, 6, 8, 9, 12 |
| | | | | | | |
| | | | | | | |

Actions:

1. If any elements initial claibration linearity is < 0.995 , qualify the data as estimated (J/UJ)
2. If any elements initial claibration linearity is < 0.95 , qualify the data as unusable (R)
- 3a. If any elements ICV or CCV recovery is $< 90\%$, qualify the data as estimated (J/UJ)
- 3b. If any elements ICV or CCV recovery is $> 110\%$, qualify results \geq MDL as estimated (J).

Do not qualify non-detects.

- 4a. If any elements ICV or CCV recovery is $< 75\%$, qualify the data as unusable (R)
- 4b. If any elements ICV or CCV recovery is $> 125\%$ qualify positive results as estimated (J) or non-detects as unusable (R).
- 4c. If any element ICV or CCV recovery is $\geq 160\%$, qualify positive results \geq MDL as unusable (R).

Do not qualify non-detects.

- 5a. If any elements CRI recovery is 50 - 69% (30 - 49% for Sb, Pb, Tb), qualify results \geq MDL (but < 2 times CRQL) as estimated (J/UJ) and results > 2 times CRQL are not qualified.
- 5b. If any elements CRI recovery is $< 50\%$ ($< 30\%$ for Sb, Pb, Ti), qualify results \geq MDL (but < 2 times CRQL) and non-detects as unusable (R). Results > 2 times CRQL are estimated (J).
- 5c. If any elements CRI recovery is $> 130\%$ but $< 180\%$ ($> 150\%$ but $\leq 200\%$ for Sb, Pb, Ti), qualify results \geq MDL (but < 2 times CRQL) as esimated (J). And non-detects and results $\geq 2x$ CRQL are not qualified.
- 5d. If CRI or (R) $> 180\%$ ($> 200\%$ for Sb, Pb, Ti), qualify results that are \geq MDL as unusable (R).

Remarks:

IV. Initial & Contining Calibration (ICP, GFAA, CVAA, etc.) (continued)

Analytical Sequence and MS Tune

(Y/N)

- 1. Were the appropriate number of ICP standards used? Y
- 2. Were the appropriate number of AA standards used? Y
- 3. Was calibration performed and documented at the beginning of each run? Y
- 4. Were calibration check standards run at 10% frequency or every two hours? Y
- 5. Were low level standard checks analyzed at approximately 2X the PQL? Y
- 6. Was ICP-MS mass calibration within 0.1 AMU? Y
- 7. Was ICP-MS % RSD of the aboslute signals for all analytes < 5%? Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

- 1. If instrument calibration is questionable, use professional judgement, qualify the data as estimated (J/UJ)
- 2. If instrument calibration documentation can not be obtained or is inadequate, qualify the data as unusable (R)
- 3. If mass calibration for ICP-MS was not within 0.1 AMU qualify analyte results as estimated (J/UJ)
- 4. If % RSD for ICP-MS was > 5% for any analyte in the tuning solution, qualify associated results as estimated (J/UJ).

Results:

V. Blanks (ICB, CCB, Method Blank, Equipment Rinsate Blank)**A. Blank Results**

If the blank level is > CRQL for any analyte, check that the analyte's concentration in the samples is > 10 times the blank value. The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account when applying the action level.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times \text{V/W} \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected | |
|---------------|-----------|---------------------|--------------|---|----------|
| CCB 435360/82 | Iron | 47.1 ug/L | 471 | 116020-1, 4, 6, 8, 9, 12 | |
| CCB 435360/96 | Calcium | 92.6 ug/L | 926 | 116020-1, 4, 6, 8, 9, 12 | |
| ICB 4362247/9 | Vanadium | 1.11 ug/L | 1.11 | None | |
| CCB 436227/52 | Antimony | 0.483 ug/L | 4.83 | None | |
| | Vanadium | 0.544 ug/L | 5.44 | None | |
| CCB 436227/73 | Vanadium | 0.835 ug/L | 8.35 | None | |
| CCB 436227/82 | Vanadium | 0.567 ug/L | 5.67 | None | |
| CCB | Vanadium | 0.865 ug/L | 8.65 | 116020-1, 4, 6, 8, 9, 12 | |
| MB 435183 | Calcium | 219 ug/L | 2190 | See ADR output 116020-1, 4, 6, 8, 9, 12 | all >10x |
| | Sodium | 207 ug/L | 2070 | ↓ ↓ | all >10x |
| MB 435184 | Manganese | 0.351 ug/L | 3.51 | ↓ ↓ | all >10x |

If additional space is required, use next page

Actions:

1. For blank results \geq MDL but \leq CRQL, qualify samples \geq MDL but $<$ CRQL as CRQL U.

Use professional judgement to qualify sample results exceeding the CRQL.

2a. If blank results are $>$ CRQL: For sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ 10 times the blank qualify results as unusable (R) or estimated (J). No action is taken for sample results \geq 10 times the blank levels.

2b. If ICB/ CCB results are $>$ CRQL; for sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ blank results, qualify results as not detected (U) at the level of the blank or unusable (R). Use professional judgement for sample results $>$ blank results.

Remarks:

V. Blanks (continued)

B. Frequency Requirements

(Y/N)

- 1. Was a method (preparation) blank analyzed for each matrix? Y
- 2. Was a method blank processed for every analytical batch (20 samples)? Y
- 3. Was a calibration blank analyzed at 10% frequency or every two hours? Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

Remarks: _____

C. Baseline Shift Evaluation

List the highest negative blank concentration for each analyte observed in laboratory or project blanks.

Deviations:

| Blank ID | Element | Max. Neg Conc. | Action Level | Samples Affected |
|----------|---------|----------------|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If the absolute value of the maximum negative blank result is > the CRQL, qualify positive results as estimated (J) and non-detects as estimated (UJ).

Remarks: _____

VI. Laboratory Control Sample Evaluation

All LCS recovery criteria are set at 80-120%

An LCS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Deviations:

| Element | Date | %R | Matrix | Samples Affected |
|---------|------|----|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any element's LCS recovery is >120%, qualify positive results as (J).
2. If any element's LCS recovery is 50-79%, qualify positive results as (J) and non-detect results as (UJ)
- 3a. If any element's LCS recovery is <50%, qualify positive results as (J) and non-detect results as (R)
- 3b. If the LCS recovery is > 150%, qualify all results as unusable (R).
4. For soil LCS recovery > upper limit, qualify samples results \geq MDL as estimated (J).
5. For soil LCS recovery < lower limit, qualify results \geq MDL as estimated (J) and non-detected estimated (UJ).
6. Use professional judgement to qualify data if the LCS frequency criteria are not met.

Remarks:

LCS %R results met control limits

VII. Matrix Spike Evaluation

All MS recovery criteria are set at 75-125%

An MS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Verify that a field blank or PE sample was not used for spiked sample analysis

Verify that a post-digestion spike was analyzed for those analytes where the pre-digestion spike recovery is outside control limits and the sample result is < 4 times the spike added.

Project Sample(s) Spiked: DA2mw-115-181001-GW

Deviations:

| Element | Spiked Sample Result | Sample Result | Spike Amount | %R | Samples Affected |
|---------|----------------------|---------------|--------------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the sample concentration exceeds the spiking level by a factor of 4X or more, do not qualify the data
2. If the spike recovery is >125%, qualify all positive values as (J).
3. If the spike recovery is between 30-74%, qualify positive values as (J) and non-detect values as estimated (UJ)
4. If the spike recovery is <30%, qualify positive values as (J) and non-detects are qualified unusable (R) if the post-digestion spike recovery is < 75% (or none was performed); non-detects are qualified as estimated (UJ) If the post-digestion spike recovery is ≥ 75%. There is no post-digestion spike performed for mercury.
5. Qualify all samples of similar matrix to the spiked sample in the same manner
6. Use professional judgement to qualify data if the MS frequency criteria are not met.
7. Use professional judgement for qualification of data for unspiked elements

Remarks: See ADR Output qualifiers applied to parent sample and its FD only

VIII. Laboratory Duplicate Evaluation

Duplicate relative percent difference (RPD) for water is 20% (both results > 5 times CDRL) or < CRDL difference (if either result is < 5 times CRDL) and RPD for soil is 35% (if both results are > 5 times CRDL or < 2 times CRDL if either result is < 5 times CRDL).

When duplicate sample values are both less than the reporting level they are considered acceptable

When duplicate sample values are within 5X the reporting level they are acceptable if their absolute difference is within 3X the reporting level

Verify that a field blank on PE sample was not used for duplicate analysis.

Deviations: _____

| Element | Sample # | Duplicate # | RPD | Samples Affected |
|---------|----------|-------------|-----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If an element's RPD is >20% (water) / >35% (soil), qualify positive results as (J) and non-detect results as (UJ)
- 2. For low concentrations, if an element's duplicate absolute difference is > 3X the reporting level, qualify positive results as (J) and non-detect results as (UJ)
- 3. Use professional judgement to qualify data if the duplicate frequency criteria are not met.

Remarks: NA

IX. Inductively Coupled Plasma (ICP) Serial Dilution Analysis

Verify that a field blank or PE sample was not used for serial dilution.

Serial dilution of positive results are performed when values exceed 50X the IDL

Results from serial dilutions should agree within 10% of the original undiluted analysis

Deviations:

| Element | Sample # | Sample Result | Serial Dilution | %D | Action |
|---------|----------|---------------|-----------------|----|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the serial dilution %D is >10 and the analyte results are >50X the IDL, qualify all positive results as estimated (J) and non-detects as estimated (UJ).

Remarks:

Serial dilution met control limits

X. Furnace Atomic Absorption QC**A. Duplicate Precision**

(Y/N)

1. Were duplicate injections performed for all samples? _____
2. Were one point analytical spikes performed for all samples? _____
3. Did duplicate injections agree within $\pm 20\%$? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If duplicate injection results are outside $\pm 20\%$, qualify positive results as (J) and non-detect results as (UJ)

Remarks:

NA

B. Post Digestion Spike Recoveries

(Y/N)

1. Did post digestion spike recoveries meet an 85-115% recovery criteria? Y
2. If spike recoveries did not meet recovery criteria were samples analyzed by MSA? Y
3. If MSA was used to analyze samples, was its' correlation coefficient ≥ 0.995 ? Y

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If post digestion spike recoveries are $>115\%$, qualify positive results as (J) and non-detect results as (U)
2. If post digestion spike recoveries are 11-84%, qualify positive results as (J) and non-detect results as (UJ)
3. If post digestion spike recoveries are $<10\%$, qualify positive results as (R) and non-detect results as (R)
4. If MSA was used to quantitate values and the correlation coefficient was <0.995 , qualify data as (J or UJ)
5. If MSA was used to quantitate values and the correlation coefficient was <0.95 , qualify data as (R)

Remarks:

PDS met control limits

XI. Inductively Coupled Plasma (ICP) Interference Check Sample Evaluation

Interference check samples should be analyzed at the beginning and end of each analysis run, or at a minimum of twice per 8 hour working shift.

Results for the ICS solution AB must fall within control limits of 20% for analytes included in the solution. Evaluate the ICS A solution raw data for results with an absolute value \geq MDL for analytes that are not present in the ICS A solution.

Deviations:

| Element | Sample # | Sample Result | Interferent Result | Action |
|---------|----------|---------------|--------------------|--------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If the ICS AB %R for an analyte is $> 120\%$, qualify sample results \geq MDL as estimated (J) and non-detects should not be qualified.
2. If the ICS AB %R for an analyte is $50-79\%$, qualify sample results that are \geq MDL as estimated (J) and non-detects as estimated (UJ).
3. If the ICS AB %R for an analyte is $<50\%$, qualify all sample results that are \geq MDL and all non-detects as unusable (R).
4. If results \geq MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences and with analyte concentration that approximate those levels in the ICS A, sample results \geq MDL should be qualified as estimated (J) and non-detects should not be qualified.
5. If negative results with absolute values $>$ MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences, affected sample results $>$ MDL should be qualified as estimated (J) and non-detects (UJ).

Remarks: ICS results met control limits

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J116020

Analysis: Cyanide, Sulfide, Nitrate, Nitrite, Sulfate, Alkalinity

Method: 9012, 9034, 9056, 2320

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: :Laboratory control limits used

 Some results were qualified as estimated due to MS/MSD and/or duplicate discrepancies

Definition of Qualifiers:
 "U", not detected at the associated level
 "UJ", not detected and associated value estimated
 "J", associated value estimated
 "R", associated value unusable or analyte identity unfounded
 "=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 12/27/18

QA Reviewed by: Richard Stahl

Date: 01/04/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH ≥ 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH ≤ 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |
|----------|---------|----------------|----------------|---------------|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks:

All holding times were met

IV. Initial & Continuing Calibration

A blank and at least three standards should be analyzed, with one of the standards being within 2X the MDL
Correlation coefficients must be ≥ 0.995
Initial calibration check recoveries must be within 90-110%
Continuing calibration check recoveries must be within 85-115%

Deviations:

| Compound | Correlation Coefficient | ICV/CCV | %R | Samples Affected |
|----------|-------------------------|---------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any compounds initial calibration linearity is < 0.995 , qualify the data as estimated (J/UJ)
2. If any compounds initial calibration linearity is < 0.95 , qualify the data as unusable (R)
3. If ICV or CCV criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If ICV or CCV recoveries fall below 50%, qualify results as unusable (R)

Remarks:

Calibration results met control limits

V. Blanks (Method Blanks and Project Blanks)

An analytical method blank must be analyzed with each batch of samples
Calculate action levels based on 5X the highest blank concentration of any given analyte
Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Analyte | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|---------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If analyte results exceed the action levels, the data are not qualified
- 2. If analyte results are below the required reporting level, report results as non-detect (U) at the reporting level
- 3. If the analyte is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

MB and CCBs were free from contamination

VI. Laboratory Control Sample Information

Each analyte's LCS % recovery must be within the control limits established by the laboratory
In general LCS % recoveries should all be within 85-115%

Deviations:

| Analyte | Date | %R | Samples Affected/Qualifiers Applied |
|---------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the LCS recovery is outside limits but >10%, qualify all positive values as estimated (J)
2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

All LCS %R results met control limits

VIII. Laboratory Duplicate Information

Each analyte's RPD should be within the laboratory established control limits
 In general RPDs should all be within 20%

Deviations:

| Analyte | RPD | RPD Limits | Samples Affected |
|---------|-----|------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the RPD is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
2. Use professional judgement to qualify additional samples in the analytical group based on RPD results
3. Use professional judgement for qualification of data when laboratory duplicates were not analyzed

Remarks:

See ADR Output for discrepancies

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116053

Analysis: SVOC

Laboratory: Test America

Method: 8270

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 1/3/19

QA Reviewed by: Richard Stahl

Date: 01/08/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection

VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection

VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction

SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|----------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

- 1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
- 2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

Holding times were met

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
VOC internal standard retention times within ± 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
SVOC internal standard retention times within ± 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

No discrepancies, ADR confirmed ISTD results verified through manual validation procedures

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs (Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| Date | Lab ID # | Fraction | Compound | Conc. (ppb) |
|------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Remarks: No contamination, confirmed with ADR

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If gross contamination exists in blanks (i.e., saturated peaks by GC/ MS), all affected compounds in the associated samples should be qualified as unusable (R) due to interference.
5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB ~~(DFTPP)~~ Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N _____

SVOC- Date of initial calibration: 10/22/18
 SVOC - Date(s) of continuing calibration: 11/2/18
 Was the 12 hour criteria met? Y or N _____

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: Calibration results met control limits

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

- Linearity evaluation, are %RSD <20? Yes or No
- Is the RPD between calibration factors ≤ 25 ? Yes or No
- Are multicomponent calibration data provided for each analysis date? Yes or No
- Is the difference between columns check $\leq 25\%D$? Yes or No
- Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$ Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks:

NA

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

percent recovery (%R)

relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS/D 280-435052

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: No discrepancies, ADR confirmed

LEIDOS
GC and LC Organic Data Review Checklist
(Explosives, PAHs, Herbicides, GRO/DRO, Methanol, etc.)

Project: RVAAP

Page 1 of 9

SDG No: J116053

Analysis: Explosives

Laboratory: Test America

Method: 8330B

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | MS/MSD Recoveries and Differences |
| Sample Preservation | LCS Recoveries |
| Method Calibration | Re-analysis and Secondary Dilution |
| Method and Project Blanks | |

Overall Remarks: DoD QSM

Some results were qualified due to surrogate, LCS, and column comparison discrepancies

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 1/3/19

QA Reviewed by: Richard Staeh

Date: 01/08/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks:

WBGMW-020-181001-GW RDX RPD is 56% and qualified (J)

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks:

Some results were reanalyzed due to low surrogate recoveries outside of holding time. Only original analyses were reported

III. Holding Times

VOC types - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection

VOC types - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection

VOC types - Soils - preserve/analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC types - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction

SVOC types - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC types | | SVOC types | | | Notes: |
|----------|----------------|---------------|----------------|----------------|---------------|--------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | |
| | | | | | | |

| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

Actions:

- 1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
- 2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

Reanalyses were analyzed outside of holding time and not noted in ADR. Results were not reported, only original analyses were reported

IV. Initial & Continuing Calibration

A blank and five standards should be analyzed, with one of the standards being within 2X the MDL

Correlation coefficients must be ≥ 0.995

The RSD of the calibration factor or the relative response factor (RRF) must be $\leq 20\%$

Continuing calibration %D must be within $\pm 15\%$

Deviations:

| Compound | Correlation Coefficient | % RSD | %D | Samples Affected |
|----------|-------------------------|-------|------|-----------------------------------|
| Tetryl | | | 21.1 | CCV 280-435517/12 All ND, no qual |
| Tetryl | | | 21.7 | CCV 280-435517/24 |
| Tetryl | | | 22.0 | CCV 280-435517/34 |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any compounds initial calibration linearity is <0.995 , qualify the data as estimated (J/UJ)
2. If any compounds initial calibration linearity is <0.95 , qualify the data as unusable (R)
3. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)

Remarks:

V. Surrogate Recoveries

List surrogate compounds with unacceptable recoveries:

Deviations:

| Sample # | Surrogate ID | % R | QC Limits | Samples Affected |
|----------|--------------|-----|-----------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any surrogate recovery is <10%, qualify all positive results in associated fractions as estimated (J)
- 2. If any surrogate recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
- 3. If surrogate recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
- 4. If surrogate recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
- 6. Use professional judgement to qualify results when surrogate recoveries have been diluted out of spec.

Remarks:

ADR Qualified for outside surrogates, see ADR OUTPUT

VI. Blanks

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is outside limits, qualify all positive values in the unspiked sample as estimated (J)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
4. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
5. Use professional judgement for qualification of data for unspiked compounds

Remarks:

NA

VIII. Laboratory Control Sample Information

General LCS Criteria:

| | |
|--------------|---------------|
| VOC types | SVOC types |
| 80-120 | 60-120 |

percent recovery (%R)

Laboratory LCS Identifications: LCS 280-435346, LCS 280-435841, LCS 280-436019

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
2. If the LCS recovery is outside limits but >10%, qualify non-detect values as esimated (UJ)
3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

See ADR for discrepancies and qualification

LEIDOS
Metals Data Review Checklist

Project: RVAAP

Page 1 of 14

SDG No: J116053

Analysis: Metals

Method: 6010/6020/7470

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|---------------------------|---|
| Case Narrative | MS/MSD Recoveries and Differences |
| Analytical Holding Times | Duplicate Relative Percent Differences |
| Sample Preservation | ICP Serial Dilution |
| Method Calibration | Furnace Atomic Absorption QC |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| LCS Recoveries | Internal Standard Performance (if applicable) |

Project specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall remarks: DoD QSM

Some results were qualified as non-detect due to blank contamination

One result was qualified as estimated due to calibration discrepancies

Definition of Qualifiers:

"U", not detected at the associated level
"UJ", not detected and associated value estimated
"J", associated value estimated
"R", associated value unusable or analyte identity unfounded
"=", compound properly identified and value positive

Reviewed by: Brooke Francis

QA Reviewed by: Richard Staeh

Date: 01/08/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No sample results were reanalyzed or diluted

III. Holding Times

Metals - Waters - preserved to pH<2, 180 days from sample collection
 Metals - Soils - 180 days from sample collection
 Mercury - Waters - preserved to pH<2, 28 days from sample collection
 Mercury - Soils - 28 days from sample collection

Deviations:

| Sample # | Metals | | | | Mercury | | | |
|----------|----------------|---------------|----------|----------|----------------|---------------|----------|----------|
| | Date Collected | Date Analyzed | Days >HT | pH Check | Date Collected | Date Analyzed | Days >HT | pH Check |
| | | | | | | | | |
| | | | | | | | | |

| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If preserved samples exceed holding time, qualify all associated results as estimated (J/UJ).
2. If unpreserved samples exceed holding time, qualify all associated results as unusable (R).
3. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
4. If water samples are not acidified, use professional judgement. Minimally, qualify data as estimated (J) and non-detects unusable (R).
5. If soil samples exceed holding time, use professional judgement to qualify data.

Remarks:

All holding times were met

IV. Initial & Contining Calibration (ICP, GFAA, CVAA, etc.)

Initial calibration linearity criteria is $r \geq 0.995$

ICV and CCV criteria are $\pm 10\%$ recovery, low level check standard allowed $\pm 30\%$

ICP inter-element check standard criteria $\pm 20\%$

Deviations:

| Element | Date | Intial Calib. | ICV/CCV | %R | Samples Affected |
|----------|-------|---------------|---------|-----|--|
| Barium | 10/31 | | CCVL | 79 | 435658/142 None |
| Vanadium | 10/31 | | CCVL | 121 | 435658/166 116053-1, 3, 4, 5, 6, 7, 8, 9 |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any elements initial claibration linearity is <0.995 , qualify the data as estimated (J/UJ)
2. If any elements initial claibration linearity is <0.95 , qualify the data as unusable (R)
- 3a. If any elements ICV or CCV recovery is $<90\%$, qualify the data as estimated (J/UJ)
- 3b. If any elements ICV or CCV recovery is $> 110\%$, qualify results \geq MDL as estimated (J).
Do not qualify non-detects.
- 4a. If any elements ICV or CCV recovery is $<75\%$, qualify the data as unusable (R)
- 4b. If any elements ICV or CCV recovery is $> 125\%$ qualify positive results as estimated (J) or non-detects as unusable (R).
- 4c. If any element ICV or CCV recovery is $\geq 160\%$, qualify positive results \geq MDL as unusable (R).
Do not qualify non-detects.
- 5a. If any elements CRI recovery is 50 - 69% (30 - 49% for Sb, Pb, Tb), qualify results \geq MDL (but < 2 times CRQL) as estimated (J/UJ) and results > 2 times CRQL are not qualified.
- 5b. If any elements CRI recovery is $< 50\%$ ($<30\%$ for Sb, Pb, TI), qualify results \geq MDL (but < 2 times CRQL) and non-detects as unusable (R). Results > 2 times CRQL are estimated (J).
- 5c. If any elements CRI recovery is $> 130\%$ but $< 180\%$ ($>150\%$ but $\leq 200\%$ for Sb, Pb, TI), qualify results \geq MDL (but < 2 times CRQL) as esimated (J). And non-detects and results $\geq 2x$ CRQL are not qualified.
- 5d. If CRI or (R) $> 180\%$ ($> 200\%$ for Sb, Pb, Ti), qualify results that are \geq MDL as unusable (R).

Remarks:

ADR did not qualify for calibration discrepancies, see Form 1's

IV. Initial & Contining Calibration (ICP, GFAA, CVAA, etc.) (continued)

Analytical Sequence and MS Tune

(Y/N)

- 1. Were the appropriate number of ICP standards used? Y
- 2. Were the appropriate number of AA standards used? Y
- 3. Was calibration performed and documented at the beginning of each run? Y
- 4. Were calibration check standards run at 10% frequency or every two hours? Y
- 5. Were low level standard checks analyzed at approximately 2X the PQL? Y
- 6. Was ICP-MS mass calibration within 0.1 AMU? Y
- 7. Was ICP-MS % RSD of the aboslute signals for all analytes < 5%? Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

- 1. If instrument calibration is questionable, use professional judgement, qualify the data as estimated (J/UJ)
- 2. If instrument calibration documentation can not be obtained or is inadequate, qualify the data as unusable (R)
- 3. If mass calibration for ICP-MS was not within 0.1 AMU qualify analyte results as estimated (J/UJ)
- 4. If % RSD for ICP-MS was > 5% for any analyte in the tuning solution, qualify associated results as estimated (J/UJ).

Results:

V. Blanks (ICB, CCB, Method Blank, Equipment Rinsate Blank)**A. Blank Results**

If the blank level is > CRQL for any analyte, check that the analyte's concentration in the samples is > 10 times the blank value. The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account when applying the action level.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times V/W \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|----------------|----------|---------------------|--------------|-------------------------------|
| ICB 435658/6 | Antimony | 0.552 | 5.52 | None |
| | Vanadium | 1.84 | 18.4 | |
| CCB 435658/141 | Copper | 1.1 | 11 | None |
| | Vanadium | 1.06 | 10.6 | |
| CCB 435658/153 | Antimony | 0.553 | 5.53 | 116053-1, 3, 4, 5, 6, 7, 8, 9 |
| | Copper | 1.11 | 11.1 | |
| CCB 435658/165 | Copper | 1.20 | 12.0 | 116053-1, 3, 4, 5, 6, 7, 8, 9 |

| | | | | |
| | | | | |
| | | | | |

If additional space is required, use next page

Actions:

1. For blank results \geq MDL but \leq CRQL, qualify samples \geq MDL but $<$ CRQL as CRQL U.

Use professional judgement to qualify sample results exceeding the CRQL.

2a. If blank results are $>$ CRQL: For sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ 10 times the blank qualify results as unusable (R) or estimated (J). No action is taken for sample results \geq 10 times the blank levels.

2b. If ICB/ CCB results are $>$ CRQL; for sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ blank results, qualify results as not detected (U) at the level of the blank or unusable (R). Use professional judgement for sample results $>$ blank results.

Remarks:

MB Contamination included in the ADR output

CCBs were not qualified based on contamination, see Form 1's

V. Blanks (continued)

The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times V/W \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

 W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|----------|---------|---------------------|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

V. Blanks (continued)

B. Frequency Requirements

(Y/N)

- 1. Was a method (preparation) blank analyzed for each matrix? Y
- 2. Was a method blank processed for every analytical batch (20 samples)? Y
- 3. Was a calibration blank analyzed at 10% frequency or every two hours? Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Remarks: _____

C. Baseline Shift Evaluation

List the highest negative blank concentration for each analyte observed in laboratory or project blanks.

Deviations:

| Blank ID | Element | Max. Neg Conc. | Action Level | Samples Affected |
|----------|---------|----------------|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If the absolute value of the maximum negative blank result is > the CRQL, qualify positive results as estimated (J) and non-detects as estimated (UJ).

Remarks: _____

VI. Laboratory Control Sample Evaluation

All LCS recovery criteria are set at 80-120%
An LCS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Deviations:

| Element | Date | %R | Matrix | Samples Affected |
|---------|------|----|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any element's LCS recovery is >120%, qualify positive results as (J).
- 2. If any element's LCS recovery is 50-79%, qualify positive results as (J) and non-detect results as (UJ)
- 3a. If any element's LCS recovery is <50%, qualify positive results as (J) and non-detect results as (R)
- 3b. If the LCS recovery is > 150%, qualify all results as unusable (R).
- 4. For soil LCS recovery > upper limit, qualify samples results \geq MDL as estimated (J).
- 5. For soil LCS recovery < lower limit, qualify results \geq MDL as esimated (J) and non-detected estimated (UJ).
- 6. Use professional judgement to qualify data if the LCS frequency criteria are not met.

Remarks: No discrepancies, ADR Confirmed

VII. Matrix Spike Evaluation

All MS recovery criteria are set at 75-125%

An MS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Verify that a field blank or PE sample was not used for spiked sample analysis

Verify that a post-digestion spike was analyzed for those analytes where the pre-digestion spike recovery is outside control limits and the sample result is < 4 times the spike added.

Project Sample(s) Spiked: _____

Deviations:

| Element | Spiked Sample Result | Sample Result | Spike Amount | %R | Samples Affected |
|---------|----------------------|---------------|--------------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the sample concentration exceeds the spiking level by a factor of 4X or more, do not qualify the data
2. If the spike recovery is >125%, qualify all positive values as (J).
3. If the spike recovery is between 30-74%, qualify positive values as (J) and non-detect values as estimated (UJ)
4. If the spike recovery is <30%, qualify positive values as (J) and non-detects are qualified unusable (R) if the post-digestion spike recovery is < 75% (or none was performed); non-detects are qualified as estimated (UJ) If the post-digestion spike recovery is ≥ 75%. There is no post-digestion spike performed for mercury.
5. Qualify all samples of similar matrix to the spiked sample in the same manner
6. Use professional judgement to qualify data if the MS frequency criteria are not met.
7. Use professional judgement for qualification of data for unspiked elements

Remarks: NA

VIII. Laboratory Duplicate Evaluation

Duplicate relative percent difference (RPD) for water is 20% (both results > 5 times CDRL) or < CRDL difference (if either result is < 5 times CRDL) and RPD for soil is 35% (if both results are > 5 times CRDL or < 2 times CRDL if either result is < 5 times CRDL).

When duplicate sample values are both less than the reporting level they are considered acceptable

When duplicate sample values are within 5X the reporting level they are acceptable if their absolute difference is within 3X the reporting level

Verify that a field blank on PE sample was not used for duplicate analysis.

Deviations: _____

| Element | Sample # | Duplicate # | RPD | Samples Affected |
|---------|----------|-------------|-----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If an element's RPD is >20% (water) / >35% (soil), qualify positive results as (J) and non-detect results as (UJ)
2. For low concentrations, if an element's duplicate absolute difference is > 3X the reporting level, qualify positive results as (J) and non-detect results as (UJ)
3. Use professional judgement to qualify data if the duplicate frequency criteria are not met.

Remarks: NA

IX. Inductively Coupled Plasma (ICP) Serial Dilution Analysis

Verify that a field blank or PE sample was not used for serial dilution.

Serial dilution of positive results are performed when values exceed 50X the IDL

Results from serial dilutions should agree within 10% of the original undiluted analysis

Deviations:

| Element | Sample # | Sample Result | Serial Dilution | %D | Action |
|---------|----------|---------------|-----------------|----|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the serial dilution %D is >10 and the analyte results are >50X the IDL, qualify all positive results as estimated (J) and non-detects as estimated (UJ).

Remarks:

NA

X. Furnace Atomic Absorption QC**A. Duplicate Precision**

(Y/N)

1. Were duplicate injections performed for all samples? _____
2. Were one point analytical spikes performed for all samples? _____
3. Did duplicate injections agree within $\pm 20\%$? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If duplicate injection results are outside $\pm 20\%$, qualify positive results as (J) and non-detect results as (UJ)

Remarks:

NA

B. Post Digestion Spike Recoveries

(Y/N)

1. Did post digestion spike recoveries meet an 85-115% recovery criteria? _____
2. If spike recoveries did not meet recovery criteria were samples analyzed by MSA? _____
3. If MSA was used to analyze samples, was its' correlation coefficient ≥ 0.995 ? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If post digestion spike recoveries are $>115\%$, qualify positive results as (J) and non-detect results as (U)
2. If post digestion spike recoveries are 11-84%, qualify positive results as (J) and non-detect results as (UJ)
3. If post digestion spike recoveries are $<10\%$, qualify positive results as (R) and non-detect results as (R)
4. If MSA was used to quantitate values and the correlation coefficient was <0.995 , qualify data as (J or UJ)
5. If MSA was used to quantitate values and the correlation coefficient was <0.95 , qualify data as (R)

Remarks:

NA

XI. Inductively Coupled Plasma (ICP) Interference Check Sample Evaluation

Interference check samples should be analyzed at the beginning and end of each analysis run,
or at a minimum of twice per 8 hour working shift.

Results for the ICS solution AB must fall within control limits of 20% for analytes included in the solution.
Evaluate the ICS A solution raw data for results with an absolute value \geq MDL for analytes that are not present
in the ICS A solution.

Deviations:

| Element | Sample # | Sample Result | Interferent Result | Action |
|---------|----------|---------------|--------------------|--------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If the ICS AB %R for an analyte is > 120%, qualify sample results \geq MDL as estimated (J) and non-detects should not be qualified.
2. If the ICS AB %R for an analyte is 50-79%, qualify sample results that are \geq MDL as estimated (J) and non-detects as estimated (UJ).
3. If the ICS AB %R for an analyte is <50%, qualify all sample results that are \geq MDL and all non-detects as unusable (R).
4. If results \geq MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences and with analyte concentration that approximate those levels in the ICS A, sample results \geq MDL should be qualified as estimated (J) and non-detects should not be qualified.
5. If negative results with absolute values > MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences, affected sample results > MDL should be qualified as estimated (J) and non-detects (UJ).

Remarks: ICS results met control limits

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J116053

Analysis: Cyanide, Alkalinity

Method: 9012, 2320

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: *Brooke Francis*

Date: 1/4/19

QA Reviewed by: *Richard Stahl*

Date: _____

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks:

No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks:

No samples were reanalyzed or diluted

VII. Matrix Spike Information

Each analyte's Matrix Spike % recovery should be within the laboratory established control limits
In general matrix spike % recoveries should all be within 75-125%

Deviations:

| Analyte | %R | %R Limits | Samples Affected |
|---------|----|-----------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the spike recovery is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. Use professional judgement to qualify additional samples in the analytical group based on MS results
4. Use professional judgement for qualification of data for unspiked analytes

Remarks:

NA

VIII. Laboratory Duplicate Information

Each analyte's RPD should be within the laboratory established control limits
In general RPDs should all be within 20%

Deviations:

| Analyte | RPD | RPD Limits | Samples Affected |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the RPD is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
- 2. Use professional judgement to qualify additional samples in the analytical group based on RPD results
- 3. Use professional judgement for qualification of data when laboratory duplicates were not analyzed

Remarks:

NA

Note: Manual data validation qualifiers are applied to specific data points as a result of outlier QC results as indicated on the Form I, followed by a reason code that identifies the nature of the QC outlier. Except where qualified separately by ADR.net; in the absence of an annotated data validation qualifier, it is understood that the laboratory qualifier is the final data validation qualifier

LEIDOS Laboratory Data Verification Checklist

| | | |
|-------------------------------------|---------|---|
| Project: | RVAAP | Page 1 of 3 |
| SDG No: | J116186 | Analyte Group: 8/260B |
| | | Sample Matrix: Water |
| | | EDD (Y/N): _____ |
| Disposition of Data Package: | _____ | |
| NCR No. (if applicable): | _____ | |

1. Case Narrative

| | |
|---|---|
| Read SDG Case Narrative | Y |
| Check Laboratory sample ID vs. Project sample ID lists | Y |
| Check that discussion covers each analytical type included in the SDG | Y |
| Check for identified nonconforming items (e.g., missed holding times, etc.) | Y |

2. Chain-of-Custody (COC)

| | |
|---|---|
| Check COC sample collection, shipping, and receiving dates | Y |
| Check that COC signature blocks are complete | Y |
| Check COC project sample IDs vs. Lab IDs and Result Form IDs | Y |
| Match COC requested analyses with Case Narrative and with data package content (Result Forms) | Y |

3. Analytical Results Form

| | |
|---|---|
| Verify that a Result Form is present for each sample and analysis | Y |
| On each Result Form check: | |
| SDG No. | Y |
| Sample ID | Y |
| Lab ID | Y |
| Date Collected | Y |
| Date Extracted | Y |
| Date Analyzed | Y |
| Result Matrix | Y |
| Result Units | Y |

4. Project Verification

| | |
|--|---|
| Check project analyte list vs. analytes reported | Y |
| Check project requested methods vs. analytical methods performed | Y |
| Check analyte reporting levels vs. project reporting level goals | Y |

5. Analytical Quality Control Information

| | |
|---|----|
| Check for surrogate recovery results (e.g., org. form II) | Y |
| Check for LCS results (e.g., org. form III, inorg. form XII) | Y |
| Check for method blank results (e.g., org. form IV, inorg. form III) | Y |
| Check for MS/MSD results (e.g., inorg. form V) | Y |
| Check for laboratory duplicate results (e.g., inorg. form VI) | NA |
| Check for Method Calibration and Run Documentation | |
| organic: | |
| instrument performance check | Y |
| initial calibration data | Y |
| continuing calibration data | Y |
| internal standard areas | Y |
| internal standard retention times | Y |
| sample clean-up documentation (org. forms V through X) | Y |
| metal: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| method linear range | Y |
| sample run sequence (inorg. forms II, IV, and VIII through XIV) | Y |
| other: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| sample run sequence | Y |

6. Incorrect Information

Identify missing items or incorrect information (i.e., missing forms, unsigned forms, incorrect sample IDs, etc.)

Contact the laboratory or project personnel to obtain missing information or correct information

Document corrections below:

7. Nonconforming Items

Document all nonconforming items that can not be resolved above in a Non-Conformance Report (NCR), complete form, file, and follow-up

| NCR # | Item |
|-------|-------|
| _____ | _____ |
| _____ | _____ |
| _____ | _____ |
| _____ | _____ |
| _____ | _____ |

Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116186

Analysis: VOC

Laboratory: Test America

Method: 8260B

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

Some results were qualified as non-detect due to trip blank contamination

Some results were qualified as estimated due to holding time discrepancies

Definition of Qualifiers:

"U", not detected at the associated level
"UJ", not detected and associated value estimated
"J", associated value estimated
"R", associated value unusable or analyte identity unfounded
"=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 12/27/18

QA Reviewed by: Richard Stahl

Date: 01/04/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|---------------------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |
| FWGmw-024-181001-GW | 10/25 | 11/9 | HT + 1 DAY | | | | | |
| FWGmw-017-181001-GW | 10/25 | 11/9 | ↓ | | | | | |
| FWGTB-181006-TB | 10/25 | 11/9 | | | | | | |
| FWGmw-021-181001-GW | 10/25 | 11/9 | | | | | | |
| FWGTB-181005-TB | 10/25 | 11/9 | ↓ | | | | | |
| FWGTB-181004-TB | 10/25 | 11/13 | HT + 5 DAYS | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

ADR did not list holding time discrepancies, see Form 1's

IV. System Monitoring Compounds (SMC) Recoveries (VOC, SVOC, Pesticides, PCBs)

List SMC compounds with unacceptable recoveries:

Note: SMC formerly known as surrogates.

Deviations:

| Sample # | VOC | | | SVOC B/N Compounds | | | SVOC Acid Compounds | | | Pest | PCB |
|----------|-----|-----|-----|-----------------------|-----|-----|------------------------|-----|-----|------|-----|
| | TOL | BFB | DCE | NBZ | FBP | TPH | PHL | 2FP | TBP | TCX | DCB |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks:

Surrogates met control limits

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)

VOC internal standard retention times within \pm 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)

SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

All IS results met control limits

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs (Yes / No)

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|-----------------|----------|--------------------|-------------|
| 10/25 | FWGTB-181006-TB | | Methylene Chloride | 0.39 ug/L |
| 10/25 | FWGTB-181005-TB | | Methylene Chloride | 0.34 ug/L |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| Date | Lab ID # | Fraction | Compound | Conc. (ppb) |
|------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Remarks: MB were free from contamination

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|--------------------|-------------------------------|--------------------|--------------------------------|
| Methylene Chloride | 0.39 ug/L | 3.9 ug/L | FWGmw-017-181001-GW, 181002-GW |
| Methylene Chloride | 0.34 ug/L | 3.4 ug/L | FWGmw-021-181001-GW, 181002-GW |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If gross contamination exists in blanks (i.e., saturated peaks by GC/MS), all affected compounds in the associated samples should be qualified as unusable (R) due to interference.
5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

ADR did not qualify for TB, see Form 1's

VII. Initial & Contining Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB) / DFTPP) Acceptable (Y) or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: 9/28/18 10/29/18 10/22/18
 VOC - Date(s) of continuing calibration: 11/8/18 11/12/18
 Was the 12 hour criteria met? (Y) or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an intial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an intial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: All calibration results met control limits

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

Linearity evaluation, are %RSD <20? Yes or No

Is the RPD between calibration factors ≤ 25 ? Yes or No

Are multicomponent calibration data provided for each analysis date? Yes or No

Is the difference between columns check $\leq 25\%D$? Yes or No

Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$ Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks: NA

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:
percent recovery (%R)
relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS 280-437301, LCS 280-436917

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

- 1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
- 2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
- 3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
- 4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
- 5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: LCS %R results met control limits

| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks: Surrogates met control limits for regular 8270D

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
 VOC internal standard retention times within ± 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
 SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

All IS results met control limits

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| Date | Lab ID # | Fraction | Compound | Conc. (ppb) |
|------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Remarks: See ADR output for blank contamination

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If gross contamination exists in blanks (i.e., saturated peaks by GC/ MS), all affected compounds in the associated samles should be qualifed as unusable (R) due to interference.
5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / ~~DFTPP~~) Acceptable or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: 11/12/18 10/29/18
 SVOC - Date(s) of continuing calibration: 11/13/18 11/1/18
 Was the 12 hour criteria met? or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: All calibration results met control limits

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

- Linearity evaluation, are %RSD <20? Yes or No
- Is the RPD between calibration factors ≤ 25 ? Yes or No
- Are multicomponent calibration data provided for each analysis date? Yes or No
- Is the difference between columns check $\leq 25\%D$? Yes or No
- Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$? Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks: NA

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:
 percent recovery (%R)
 relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA _____

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| VOC | SVOC | Pest | PCB |
|--------|--------|--------|--------|
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS 280-435687 LCS 280-435408

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.
1. If the LCS recovery is below limits but > one- half the lower limit, qualify valves as estimated (J/UJ).
 2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
 3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
 4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
 5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: LCS %R results met control limits

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116186

Analysis: Pesticides/PCB

Laboratory: Test America

Method: 8081/8082

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

Some sample results were qualified due to MS/MSD, column comparison, and calibration discrepancies

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: Column comparison discrepancies were not noted in ADR, see Form 1's)
Calibration discrepancies were not noted in the narrative

pcbS

The following samples required a sulfuric acid clean-up, via EPA Method 3665A, to reduce matrix interferences:
FWGmw-021-181001-GW (280-116186-5), (LCS 280-436278/2-A), (MB 280-436278/1-A) and (280-116303-B-1-A).

The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur:
FWGmw-021-181001-GW (280-116186-5), (LCS 280-436278/2-A), (MB 280-436278/1-A) and (280-116303-B-1-A).

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|----------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |

| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks:All surrogates met control limits

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
 VOC internal standard retention times within \pm 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
 SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

~~IS results met control limits.~~

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs **Yes / No**

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Remarks: MBs were free from contamination

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If gross contamination exists in blanks (i.e., saturated peaks by GC/ MS), all affected compounds in the associated samles should be qualified as unusable (R) due to interference.
5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP) Acceptable Y or N
 All compounds must have an RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: NA

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

- Linearity evaluation, are %RSD <20? Yes or No
- Is the RPD between calibration factors ≤ 25 ? Yes or No
- Are multicomponent calibration data provided for each analysis date? Yes or No
- Is the difference between columns check $\leq 25\%D$? Yes or No
- Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$? Yes or No

Deviations:

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks: See ADR output for discrepancies, not qualified by ADR, see Form 1's **ADR QUAL AS NEEDED**

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS 280-435801 LCS 280-436278

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: LCS %R results met control limits

LEIDOS
GC and LC Organic Data Review Checklist
(Explosives, PAHs, Herbicides, GRO/DRO, Methanol, etc.)

Project: RVAAP

Page 1 of 9

SDG No: J116186

Analysis: Explosives

Method: 8330B

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | MS/MSD Recoveries and Differences |
| Sample Preservation | LCS Recoveries |
| Method Calibration | Re-analysis and Secondary Dilution |
| Method and Project Blanks | |

Overall Remarks: DoD QSM

Some results were qualified due to MS/MSD and column comparison discrepancies

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 12/27/18

QA Reviewed by: Richard Stach

Date: 01/04/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: RESULTS FROM BOTH COLUMNS WERE REPORTED BY LAB; AND
-Some samples were reanalyzed for RDX and HMX and the highest result was reported MARKED AS FINAL

III. Holding Times

VOC types - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection

VOC types - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection

VOC types - Soils - preserve/analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC types - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction

SVOC types - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC types | | SVOC types | | | Notes: |
|----------|----------------|---------------|----------------|----------------|---------------|--------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

All holding times were met

IV. Initial & Continuing Calibration

A blank and five standards should be analyzed, with one of the standards being within 2X the MDL

Correlation coefficients must be ≥ 0.995

The RSD of the calibration factor or the relative response factor (RRF) must be $\leq 20\%$

Continuing calibration %D must be within $\pm 15\%$

Deviations:

| Compound | Correlation Coefficient | % RSD | %D | Samples Affected |
|----------|-------------------------|-------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any compounds initial calibration linearity is < 0.995 , qualify the data as estimated (J/UJ)
2. If any compounds initial calibration linearity is < 0.95 , qualify the data as unusable (R)
3. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)

Remarks:

All calibration results met control limits

V. Surrogate Recoveries

List surrogate compounds with unacceptable recoveries:

Deviations:

| Sample # | Surrogate ID | % R | QC Limits | Samples Affected |
|----------|--------------|-----|-----------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any surrogate recovery is <10%, qualify all positive results in associated fractions as estimated (J)
- 2. If any surrogate recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
- 3. If surrogate recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
- 4. If surrogate recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
- 6. Use professional judgement to qualify results when surrogate recoveries have been diluted out of spec.

Remarks:

See ADR output for discrepancies, however results were ND and did not require qualification

VI. Blanks

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: MB was free from contamination

VI. Blanks (continued)

Calculate action levels based on 5X the highest blank concentration of any given compound
 Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

VII. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

| | |
|-----------|------------|
| VOC types | SVOC types |
| 70-130 | 45-135 |
| <30 | <50 |

percent recovery (%R)
relative percent difference (RPD)

Project Sample(s) Spiked: FWGmw-021-181001-GW

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If the spike recovery is outside limits, qualify all positive values in the unspiked sample as estimated (J)
- 2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
- 3. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
- 4. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
- 5. Use professional judgement for qualification of data for unspiked compounds

Remarks: See ADR outputs for qualification

VIII. Laboratory Control Sample Information

General LCS Criteria:

percent recovery (%R)

| | |
|--------------|---------------|
| VOC types | SVOC types |
| 80-120 | 60-120 |

Laboratory LCS Identifications:

LCS 280-435504

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

LCS %R results met control limits

**Leidos - Project Specific
Perchlorate by Mass Spectrometry Methods Data Verification/Validation**

Project: RVAAP

Page 1 of 10

SDG No: J116186

Analysis: Perchlorate

Method: 6860

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Isotope Ratios |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| Mas Tuning | |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

*** If this SDG requires full validation; recalculations from the raw data are required where noted in the verification/validation checklist. Attach all calculations at the end of the validation checklist.**

Data verification and data validation are essentially identical, with the exception that validation requires results to be recalculated from the raw data.

Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded

Verification/Validation by: Brooke Francis

QA Reviewed by: Richard Stahl

Date: 12/27/18

Date: 01/04/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

IV. ³⁵CL/³⁷CL Isotope Ratios

List any field samples, field QC samples, or laboratory QC samples where the ³⁵CL/³⁷CL Isotope ratio does not fall within 2.3 to 2.8:

Deviations:

| Sample # | Provide the ratio below: |
|----------|--------------------------|
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

| Sample # | Provide the ratio below: |
|----------|--------------------------|
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

Actions:

1. If the ³⁵CL/³⁷CL isotope ratio does not meet acceptance criteria the sample must be reanalyzed.
2. If any sample is reported with an unacceptable ³⁵CL/³⁷CL isotope ratio, the results must be rejected (R)

Remarks:

Ration met control limits

V. Internal Standards Performance

Internal standard areas must be between $\pm 50\%$ of the average areas from the initial calibrations (Y/N)
Relative retention times must be within 0.98-1.02 (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time is outside acceptance criteria use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

IS met control limits

VI. Blanks

A method blank was reported for each aqueous analytical batch and one method blank was reported for each soil extraction batch? (Y/N)

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Sample ID # | Compound | Conc. |
|-------|-------------|----------|-------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Remarks: MB and CCBs were free from contamination

VI. Blanks (continued)

Calculate the action level based on 5X the highest blank concentration

Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If compound results exceed the action levels, the data are not qualified
- 2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
- 3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
- 4. If contamination exists in method blanks < 1/2 LOQ, samples must be re-extracted and reanalyzed.
Use professional judgement to qualify the data if this occurs.
- 5. If method blanks were not analyzed use professional judgement to qualify data. Data may be rejected (R).

Remarks: _____

VII. Initial & Continuing Calibration (VOC, SVOC)

Mass Calibration Acceptable? (Y/N)

Date of initial calibration: _____

r>0.995? (Y/N)

ICV ≤ 15% drift? (Y/N)

Date(s) of continuing calibration: _____

CCV analyzed at beginning of analytical sequence and after every 10 field sample? (Y/N)

CCV ≤ 15% drift? (Y/N)

LOQ Standard ≤ 30% drift? (Y/N)

LOQ Standard analyzed daily? (Y/N)

Deviations:

Calibration results met control limits

| Compound | Date | r value | %Drift | Samples Affected |
|----------|------|---------|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

*** If this SDG requires full validation; recalculate the r value, a CCV% Drift, and a LOQ % Drift from the raw data. Attach all calculations at the end of the validation checklist.**

1. If initial calibration curve criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. Only evaluate the ICV if it brackets field samples. If the ICV does bracket field samples, then CCV actions apply
3. If a CCV is above the upper control limit, qualify detects as estimated (J). Nondetects require no action.
4. If a CCV is below the lower control limit but > 30% recovery, qualify results as estimated (J/UJ).
5. If a CCV is ≤ 30% recovery, qualify detects as estimated (J) and nondetects as rejected (R)
6. If CCVs were not analyzed at the proper frequency, use professional judgement.
7. If an acceptable mass calibration was not performed, then all data should be rejected (R)
8. If a LOQ standard is above the upper control limit, qualify detects as estimated (J). Nondetects require no action.
9. If a LOQ standard is below the lower control limit but > 10% recovery, qualify results as estimated (J/UJ).
10. If a LOQ standard is ≤ 10% recovery, qualify detects as estimated (J) and nondetects as rejected (R)
11. If LOQ standards were not analyzed at the proper frequency, use professional judgement.

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

percent recovery (%R) 80-120% recovery
 relative percent difference (RPD) 20% RPD

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ).
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

*** If this SDG requires full validation; recalculate at least one % recovery and one % RPD from the raw data. Attach all calculations at the end of the validation checklist.**

Remarks:

NA

X. Laboratory Control Sample Information

General LCS Criteria:
Percent recovery (%R) = 80-120% recovery
RPD if LCSD performed = 20% RPD

Laboratory LCS Identifications: LCS 280-436718/13

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

*** If this SDG requires full validation; recalculate at least one % recovery and one % RPD (if LCSD was performed) from the raw data. Attach all calculations at the end of the validation checklist.**

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: LCS %R met control limits

LEIDOS
Metals Data Review Checklist

Project: RVAAP

Page 1 of 14

SDG No: J116186

Analysis: Metals

Method: 6010/6020/7470

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|---|
| Case Narrative | MS/MSD Recoveries and Differences |
| Analytical Holding Times | Duplicate Relative Percent Differences |
| Sample Preservation | ICP Serial Dilution |
| Method Calibration | Furnace Atomic Absorption QC |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| LCS Recoveries | Internal Standard Performance (if applicable) |

Project specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall remarks: DoD QSM

Some results were qualified as estimated due to calibration, serial dilution, PDS, and MS/MS discrepancies

Some results were qualified as non-detect due to blank contamination

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 12/27

QA Reviewed by: Richard Staeh

Actions:

1. If preserved samples exceed holding time, qualify all associated results as estimated (J/UJ).
2. If unpreserved samples exceed holding time, qualify all associated results as unusable (R).
3. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
4. If water samples are not acidified, use professional judgement. Minimally, qualify data as estimated (J) and non-detects unusable (R).
5. If soil samples exceed holding time, use professional judgement to qualify data.

Remarks:

All holding times were met

IV. Initial & Continging Calibration (ICP, GFAA, CVAA, etc.)

Initial calibration linearity criteria is $r \geq 0.995$

ICV and CCV criteria are $\pm 10\%$ recovery, low level check standard allowed $\pm 30\%$

ICP inter-element check standard criteria $\pm 20\%$

Deviations:

| Element | Date | Intial Calib. | ICV/CCV | %R | Samples Affected |
|-----------|------|---------------|---------|-----|---|
| Sodium | | | CCVL | 128 | 436427-67 116186-9, 10, 11, 12 |
| Beryllium | | | CCV | 121 | 437281-76 116186-5, 9, 10, 11, 12 |
| Selenium | | | CCV | 119 | ↓ |

Cadmium

121

1. If any elements initial claibration linearity is < 0.995 , qualify the data as estimated (J/UJ) ↓
2. If any elements initial claibration linearity is < 0.95 , qualify the data as unusable (R)
- 3a. If any elements ICV or CCV recovery is $< 90\%$, qualify the data as estimated (J/UJ)
- 3b. If any elements ICV or CCV recovery is $> 110\%$, qualify results \geq MDL as estimated (J).
Do not qualify non-detects.
- 4a. If any elements ICV or CCV recovery is $< 75\%$, qualify the data as unusable (R)
- 4b. If any elements ICV or CCV recovery is $> 125\%$ qualify positive results as estimated (J) or non-detects as unusable (R).
- 4c. If any element ICV or CCV recovery is $\geq 160\%$, qualify positive results \geq MDL as unusable (R).
Do not qualify non-detects.
- 5a. If any elements CRI recovery is 50 - 69% (30 - 49% for Sb, Pb, Tb), qualify results \geq MDL (but < 2 times CRQL) as estimated (J/UJ) and results > 2 times CRQL are not qualified.
- 5b. If any elements CRI recovery is $< 50\%$ ($< 30\%$ for Sb, Pb, Ti), qualify results \geq MDL (but < 2 times CRQL) and non-detects as unusable (R). Results > 2 times CRQL are estimated (J).
- 5c. If any elements CRI recovery is $> 130\%$ but $< 180\%$ ($> 150\%$ but $\leq 200\%$ for Sb, Pb, Ti), qualify results \geq MDL (but < 2 times CRQL) as esimated (J). And non-detects and results $\geq 2x$ CRQL are not qualified.
- 5d. If CRI or (R) $> 180\%$ ($> 200\%$ for Sb, Pb, Ti), qualify results that are \geq MDL as unusable (R).

Remarks: _____

IV. Initial & Contining Calibration (ICP, GFAA, CVAA, etc.) (continued)

Analytical Sequence and MS Tune

(Y/N)

- 1. Were the appropriate number of ICP standards used? _____ Y
- 2. Were the appropriate number of AA standards used? _____ Y
- 3. Was calibration performed and documented at the beginning of each run? _____ Y
- 4. Were calibration check standards run at 10% frequency or every two hours? _____ Y
- 5. Were low level standard checks analyzed at approximately 2X the PQL? _____ Y
- 6. Was ICP-MS mass calibration within 0.1 AMU? _____ Y
- 7. Was ICP-MS % RSD of the aboslute signals for all analytes < 5%? _____ Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

- 1. If instrument calibration is questionable, use professional judgement, qualify the data as estimated (J/UJ)
- 2. If instrument calibration documentation can not be obtained or is inadequate, qualify the data as unusable (R)
- 3. If mass calibration for ICP-MS was not within 0.1 AMU qualify analyte results as estimated (J/UJ)
- 4. If % RSD for ICP-MS was > 5% for any analyte in the tuning solution, qualify associated results as estimated (J/UJ).

Results:

V. Blanks (ICB, CCB, Method Blank, Equipment Rinsate Blank)**A. Blank Results**

If the blank level is > CRQL for any analyte, check that the analyte's concentration in the samples is > 10 times the blank value. The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account when applying the action level.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times \text{V/W} \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|---------------|----------|---------------------|--------------|--|
| CCB 436427-52 | Sodium | 221 ug/L | 2210 | 116186-1, 2, 5, 9, 10, 11, 12 |
| CCB 436427-66 | Sodium | 207 ug/L | 2070 | 116186-9, 10, 11, 12 |
| ICB 437281-10 | Vanadium | 0.856 | 8.56 | None |
| CCB 437281-57 | Vanadium | 1.90 | 19 | 116186-1, 2 |
| CCB 437281-69 | Antimony | 0.525 | 5.25 | 116186-1, 2, 5, 9, 10, 11, 12 |
| | Vanadium | 2.14 | 21.4 | |
| CCB 437281-77 | Vanadium | 2.15 | 21.5 | 116186-5, 9, 10, 11, 12 |
| ICB 437321-10 | Vanadium | 0.856 | 8.56 | None |
| CCB 437321-61 | Antimony | 0.471 | 4.71 | 116186-1, 2, 9, 10 |
| MB 435538 | Vanadium | 0.572 | 5.72 | See ADR Output 116186-1, 2, 5, 9, 10, 11, 12 |
| | | | | |

If additional space is required, use next page

Actions:

1. For blank results \geq MDL but \leq CRQL, qualify samples \geq MDL but $<$ CRQL as CRQL U.

Use professional judgement to qualify sample results exceeding the CRQL.

2a. If blank results are $>$ CRQL: For sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ 10 times the blank qualify results as unusable (R) or estimated (J). No action is taken for sample results \geq 10 times the blank levels.

2b. If ICB/ CCB results are $>$ CRQL; for sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ blank results, qualify results as not detected (U) at the level of the blank or unusable (R). Use professional judgement for sample results $>$ blank results.

Remarks:

V. Blanks (continued)

The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times \text{V/W} \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)
W = weight of sample digested (usually 1 g)

Deviations:

| | | | | |
| | | | | |

V. Blanks (continued)

B. Frequency Requirements

(Y/N)

- 1. Was a method (preparation) blank analyzed for each matrix? Y
- 2. Was a method blank processed for every analytical batch (20 samples)? Y
- 3. Was a calibration blank analyzed at 10% frequency or every two hours? Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Remarks: _____

C. Baseline Shift Evaluation

List the highest negative blank concentration for each analyte observed in laboratory or project blanks.

Deviations:

| Blank ID | Element | Max. Neg Conc. | Action Level | Samples Affected |
|----------|---------|----------------|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If the absolute value of the maximum negative blank result is > the CRQL, qualify positive results as estimated (J) and non-detects as estimated (UJ).

Remarks: _____

VI. Laboratory Control Sample Evaluation

All LCS recovery criteria are set at 80-120%

An LCS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Deviations:

| Element | Date | %R | Matrix | Samples Affected |
|---------|------|----|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any element's LCS recovery is >120%, qualify positive results as (J).
2. If any element's LCS recovery is 50-79%, qualify positive results as (J) and non-detect results as (UJ)
- 3a. If any element's LCS recovery is <50%, qualify positive results as (J) and non-detect results as (R)
- 3b. If the LCS recovery is > 150%, qualify all results as unusable (R).
4. For soil LCS recovery > upper limit, qualify samples results ≥ MDL as estimated (J).
5. For soil LCS recovery < lower limit, qualify results ≥ MDL as esimated (J) and non-detected estimated (UJ).
6. Use professional judgement to qualify data if the LCS frequency criteria are not met.

Remarks:

LCS %R met control limits

VII. Matrix Spike Evaluation

All MS recovery criteria are set at 75-125%

An MS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Verify that a field blank or PE sample was not used for spiked sample analysis

Verify that a post-digestion spike was analyzed for those analytes where the pre-digestion spike recovery is outside control limits and the sample result is < 4 times the spike added.

Project Sample(s) Spiked: _____

Deviations:

| Element | Spiked Sample Result | Sample Result | Spike Amount | %R | Samples Affected |
|---------|----------------------|---------------|--------------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the sample concentration exceeds the spiking level by a factor of 4X or more, do not qualify the data
2. If the spike recovery is >125%, qualify all positive values as (J).
3. If the spike recovery is between 30-74%, qualify positive values as (J) and non-detect values as estimated (UJ)
4. If the spike recovery is <30%, qualify positive values as (J) and non-detects are qualified unusable (R) if the post-digestion spike recovery is < 75% (or none was performed); non-detects are qualified as estimated (UJ) If the post-digestion spike recovery is ≥ 75%. There is no post-digestion spike performed for mercury.
5. Qualify all samples of similar matrix to the spiked sample in the same manner
6. Use professional judgement to qualify data if the MS frequency criteria are not met.
7. Use professional judgement for qualification of data for unspiked elements

Remarks: See ADR output

VIII. Laboratory Duplicate Evaluation

Duplicate relative percent difference (RPD) for water is 20% (both results > 5 times CDRL) or < CRDL difference (if either result is < 5 times CRDL) and RPD for soil is 35% (if both results are > 5 times CRDL or < 2 times CRDL if either result is < 5 times CRDL).

When duplicate sample values are both less than the reporting level they are considered acceptable

When duplicate sample values are within 5X the reporting level they are acceptable if their absolute difference is within 3X the reporting level

Verify that a field blank on PE sample was not used for duplicate analysis.

Deviations: _____

| Element | Sample # | Duplicate # | RPD | Samples Affected |
|---------|----------|-------------|-----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If an element's RPD is >20% (water) / >35% (soil), qualify positive results as (J) and non-detect results as (UJ)
2. For low concentrations, if an element's duplicate absolute difference is > 3X the reporting level, qualify positive results as (J) and non-detect results as (UJ)
3. Use professional judgement to qualify data if the duplicate frequency criteria are not met.

Remarks: NA

IX. Inductively Coupled Plasma (ICP) Serial Dilution Analysis

Verify that a field blank or PE sample was not used for serial dilution.
 Serial dilution of positive results are performed when values exceed 50X the IDL
 Results from serial dilutions should agree within 10% of the original undiluted analysis

Deviations:

| Element | Sample # | Sample Result | Serial Dilution | %D | Action |
|---------|--------------|---------------|-----------------|----|---------------------------|
| Calcium | 280-116186-1 | | | 11 | (J), not qualified by ADR |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the serial dilution %D is >10 and the analyte results are >50X the IDL, qualify all positive results as estimated (J) and non-detects as estimated (UJ).

Remarks: _____

X. Furnace Atomic Absorption QC

A. Duplicate Precision

(Y/N)

- 1. Were duplicate injections performed for all samples? _____
- 2. Were one point analytical spikes performed for all samples? _____
- 3. Did duplicate injections agree within $\pm 20\%$? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

- 1. If duplicate injection results are outside $\pm 20\%$, qualify positive results as (J) and non-detect results as (UJ)

Remarks: NA

B. Post Digestion Spike Recoveries

(Y/N)

- 1. Did post digestion spike recoveries meet an 85-115% recovery criteria? N
- 2. If spike recoveries did not meet recovery criteria were samples analyzed by MSA? Y
- 3. If MSA was used to analyze samples, was its' correlation coefficient ≥ 0.995 ? Y

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|--|
| Silver | 79% | FWGmw-017-181001-GW (J) not qualified by ADR |
| | | |
| | | |
| | | |
| | | |

Actions:

- 1. If post digestion spike recoveries are $>115\%$, qualify positive results as (J) and non-detect results as (U)
- 2. If post digestion spike recoveries are 11-84%, qualify positive results as (J) and non-detect results as (UJ)
- 3. If post digestion spike recoveries are $<10\%$, qualify positive results as (R) and non-detect results as (R)
- 4. If MSA was used to quantitate values and the correlation coefficient was <0.995 , qualify data as (J or UJ)
- 5. If MSA was used to quantitate values and the correlation coefficient was <0.95 , qualify data as (R)

Remarks: _____

XI. Inductively Coupled Plasma (ICP) Interference Check Sample Evaluation

Interference check samples should be analyzed at the beginning and end of each analysis run,
or at a minimum of twice per 8 hour working shift.

Results for the ICS solution AB must fall within control limits of 20% for analytes included in the solution. Evaluate the ICS A solution raw data for results with an absolute value \geq MDL for analytes that are not present in the ICS A solution.

Deviations:

| Element | Sample # | Sample Result | Interferent Result | Action |
|---------|----------|---------------|--------------------|--------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If the ICS AB %R for an analyte is > 120%, qualify sample results \geq MDL as estimated (J) and non-detects should not be qualified.
2. If the ICS AB %R for an analyte is 50-79%, qualify sample results that are \geq MDL as estimated (J) and non-detects as estimated (UJ).
3. If the ICS AB %R for an analyte is <50%, qualify all sample results that are \geq MDL and all non-detects as unusable (R).
4. If results \geq MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences and with analyte concentration that approximate those levels in the ICS A, sample results \geq MDL should be qualified as estimated (J) and non-detects should not be qualified.
5. If negative results with absolute values > MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences, affected sample results > MDL should be qualified as estimated (J) and non-detects (UJ).

Remarks: All ICS results met control limits

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J116186

Analysis: Cyanide

Method: 9012

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: DoD QSM

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: *Brooke Francis*

Date: 12/28/18

QA Reviewed by: *Richard Staeh*

Date: 01/04/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH \geq 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH \leq 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks:

All holding times were met

IV. Initial & Continuing Calibration

A blank and at least three standards should be analyzed, with one of the standards being within 2X the MDL
 Correlation coefficients must be ≥ 0.995
 Initial calibration check recoveries must be within 90-110%
 Continuing calibration check recoveries must be within 85-115%

Deviations:

| Compound | Correlation Coefficient | ICV/ CCV | %R | Samples Affected |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If analyte results exceed the action levels, the data are not qualified
2. If analyte results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the analyte is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

All blanks were free from contamination

VI. Laboratory Control Sample Information

Each analyte's LCS % recovery must be within the control limits established by the laboratory
In general LCS % recoveries should all be within 85-115%

Deviations:

| Analyte | Date | %R | Samples Affected/Qualifiers Applied |
|---------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the LCS recovery is outside limits but >10%, qualify all positive values as estimated (J)
2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

All LCS %R results met control limits

VII. Matrix Spike Information

Each analyte's Matrix Spike % recovery should be within the laboratory established control limits
 In general matrix spike % recoveries should all be within 75-125%

Deviations:

| Analyte | %R | %R Limits | Samples Affected |
|---------|----|--------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the spike recovery is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. Use professional judgement to qualify additional samples in the analytical group based on MS results
4. Use professional judgement for qualification of data for unspiked analytes

Remarks:

All MS/MSD %R and RPD results met control limits

VIII. Laboratory Duplicate Information

Each analyte's RPD should be within the laboratory established control limits
In general RPDs should all be within 20%

Deviations:

| Analyte | RPD | RPD Limits | Samples Affected |
|---------|-----|------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the RPD is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
- 2. Use professional judgement to qualify additional samples in the analytical group based on RPD results
- 3. Use professional judgement for qualification of data when laboratory duplicates were not analyzed

Remarks:

NA

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J116186

Analysis: Hexa Chromium

Method: 7196

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: Laboratory control limits

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 12/28/18

QA Reviewed by: Richard Saeh

Date: 01/04/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH ≥ 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH ≤ 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |
|----------|---------|----------------|----------------|---------------|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks:

All holding times were met

IV. Initial & Continuing Calibration

A blank and at least three standards should be analyzed, with one of the standards being within 2X the MDL

Correlation coefficients must be ≥ 0.995

Initial calibration check recoveries must be within 90-110%

Continuing calibration check recoveries must be within 85-115%

Deviations:

| Compound | Correlation Coefficient | ICV/CCV | %R | Samples Affected |
|----------|-------------------------|---------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any compounds initial calibration linearity is <0.995 , qualify the data as estimated (J/UJ)
2. If any compounds initial calibration linearity is <0.95 , qualify the data as unusable (R)
3. If ICV or CCV criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If ICV or CCV recoveries fall below 50%, qualify results as unusable (R)

Remarks:

Calibration results met control limits

V. Blanks (Method Blanks and Project Blanks)

An analytical method blank must be analyzed with each batch of samples
 Calculate action levels based on 5X the highest blank concentration of any given analyte
 Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Analyte | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|---------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If analyte results exceed the action levels, the data are not qualified
2. If analyte results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the analyte is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

MB and CCB were free from contamination

VII. Matrix Spike Information

Each analyte's Matrix Spike % recovery should be within the laboratory established control limits
In general matrix spike % recoveries should all be within 75-125%

Deviations:

| Analyte | %R | %R Limits | Samples Affected |
|---------|----|--------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the spike recovery is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. Use professional judgement to qualify additional samples in the analytical group based on MS results
4. Use professional judgement for qualification of data for unspiked analytes

Remarks:

NA

VIII. Laboratory Duplicate Information

Each analyte's RPD should be within the laboratory established control limits
In general RPDs should all be within 20%

Deviations:

| Analyte | RPD | RPD Limits | Samples Affected |
|---------|-----|------------|------------------|
| | | | |
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the RPD is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
2. Use professional judgement to qualify additional samples in the analytical group based on RPD results
3. Use professional judgement for qualification of data when laboratory duplicates were not analyzed

Remarks:

NA

Note: Manual data validation qualifiers are applied to specific data points as a result of outlier QC results as indicated on the Form I, followed by a reason code that identifies the nature of the QC outlier. Except where qualified separately by ADR.net, in the absence of an annotated data validation qualifier, it is understood that the laboratory qualifier is the final data validation qualifier

LEIDOS Laboratory Data Verification Checklist

| | | |
|-------------------------------------|---------|---|
| Project: | RVAAP | Page 1 of 3 |
| SDG No: | J116270 | Analyte Group: VOC, SVOC/PAH, Pest/PCB, Explosives, Metals, Wet Chem |
| | | Sample Matrix: Water |
| | | EDD (Y/N): |
| Disposition of Data Package: | | |
| NCR No. (if applicable): | | |

1. Case Narrative

| | |
|---|---|
| Read SDG Case Narrative | Y |
| Check Laboratory sample ID vs. Project sample ID lists | Y |
| Check that discussion covers each analytical type included in the SDG | Y |
| Check for identified nonconforming items (e.g., missed holding times, etc.) | Y |

2. Chain-of-Custody (COC)

| | |
|---|---|
| Check COC sample collection, shipping, and receiving dates | Y |
| Check that COC signature blocks are complete | Y |
| Check COC project sample IDs vs. Lab IDs and Result Form IDs | Y |
| Match COC requested analyses with Case Narrative and with data package content (Result Forms) | Y |

3. Analytical Results Form

| | |
|---|---|
| Verify that a Result Form is present for each sample and analysis | Y |
| On each Result Form check: | |
| SDG No. | Y |
| Sample ID | Y |
| Lab ID | Y |
| Date Collected | Y |
| Date Extracted | Y |
| Date Analyzed | Y |
| Result Matrix | Y |
| Result Units | Y |

4. Project Verification

| | |
|--|---|
| Check project analyte list vs. analytes reported | Y |
| Check project requested methods vs. analytical methods performed | Y |
| Check analyte reporting levels vs. project reporting level goals | Y |

5. Analytical Quality Control Information

| | |
|---|----|
| Check for surrogate recovery results (e.g., org. form II) | Y |
| Check for LCS results (e.g., org. form III, inorg. form XII) | Y |
| Check for method blank results (e.g., org. form IV, inorg. form III) | Y |
| Check for MS/MSD results (e.g., inorg. form V) | Y |
| Check for laboratory duplicate results (e.g., inorg. form VI) | NA |
| Check for Method Calibration and Run Documentation | |
| organic: | |
| instrument performance check | Y |
| initial calibration data | Y |
| continuing calibration data | Y |
| internal standard areas | Y |
| internal standard retention times | Y |
| sample clean-up documentation (org. forms V through X) | Y |
| metal: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| method linear range | Y |
| sample run sequence (inorg. forms II, IV, and VIII through XIV) | Y |
| other: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| sample run sequence | Y |

6. Incorrect Information

Identify missing items or incorrect information (i.e., missing forms, unsigned forms, incorrect sample IDs, etc.)

Contact the laboratory or project personnel to obtain missing information or correct information

Document corrections below:

7. Nonconforming Items

Document all nonconforming items that can not be resolved above in a Non-Conformance Report (NCR), complete form, file, and follow-up

| NCR # | Item |

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116270

Analysis: VOC

Laboratory: Test America

Method: 8260B

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

Some results were qualified as estimated due to holding time discrepancies

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 12/28/18

QA Reviewed by: Richard Staeh

Date: 01/05/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|-----------------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |
| FWGTB-181006-TB | 10/26 | 11/12 | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

ADR did not qualify based on holding times

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N) **(Y/N)**
 VOC internal standard retention times within ± 30 seconds of standard (Y/N) **(Y/N)**

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
 SVOC internal standard retention times within ± 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
- 2. Non-detected compounds quantitated using an IS area count $>100\%$ should not be qualified
- 3. Non-detected compounds quantitated using an IS area count $<50\%$, qualify as estimated (UJ)
- 4. If extremely low area counts are reported ($<50\%$ of the lower limit), qualify non-detects as unusable (R)
- 5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks: No discrepancies, ADR Confirmed (ADR does not evaluate ISTD, assessed during manual validation)

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| Date | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|-----------------|----------|--------------------|-------------|
| 10/26 | FWGTB-181006-TB | | Methylene Chloride | 0.33 ug/L |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Remarks: MB were free from contamination

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|--------------------|-------------------------------|--------------------|-------------------------|
| Methylene Chloride | 0.33 ug/L | 3.3 ug/L | All samples ND, no qual |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If compound results exceed the action levels, the data are not qualified
- 2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
- 3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
- 4. If gross contamination exists in blanks (i.e., saturated peaks by GC/ MS), all affected compounds in the associated samles should be qualified as unusable (R) due to interference.
- 5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB/ DFTPP) Acceptable (Y) or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: 10/22
 VOC - Date(s) of continuing calibration: 11/9 11/12
 Was the 12 hour criteria met? (Y) or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: Calibration results met control limits

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

- Linearity evaluation, are %RSD <20? Yes or No
- Is the RPD between calibration factors ≤ 25 ? Yes or No
- Are multicomponent calibration data provided for each analysis date? Yes or No
- Is the difference between columns check $\leq 25\%D$? Yes or No
- Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$ Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks:

NA

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:
 percent recovery (%R)
 relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| VOC | SVOC | Pest | PCB |
|--------|--------|--------|--------|
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications:

LCS/D 280-436980 LCS 280-427213

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

- 1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
- 2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
- 3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
- 4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
- 5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

No discrepancies, ADR Confirmed

| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks:

See ADR Output

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
 VOC internal standard retention times within ± 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
 SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
- 2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
- 3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
- 4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
- 5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks: No discrepancies, ADR Confirmed (ADR does not evaluate ISTD, assessed during manual validation)

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes/No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|----------|----------|----------|-------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: See ADR Output for contamination

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / ~~DFTPP~~) Acceptable or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: 11/12 10/29
 SVOC - Date(s) of continuing calibration: 11/13 11/1
 Was the 12 hour criteria met? or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: Calibration results met control limits

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

percent recovery (%R)

relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS 280-435687 LCS 280-435408

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one- half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: No discrepancies, ADR Confirmed

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116270

Analysis: Pesticides/PCB

Laboratory: Test America

Method: 8081/8082

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 12/28/18

QA Reviewed by: Richard Stahl

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

PCB

The following samples required a sulfuric acid clean-up, via EPA Method 3665A, to reduce matrix interferences:

FWGmw-018-181001-GW (280-116270-1), FWGmw-020-181001-GW (280-116270-9), (LCS 280-436278/2-A), (MB 280-436278/1-A) and (280-116303-B-1-A). Acid Lot: 161554

The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur:

FWGmw-018-181001-GW (280-116270-1), FWGmw-020-181001-GW (280-116270-9), (LCS 280-436278/2-A), (MB 280-436278/1-A) and (280-116303-B-1-A). The reagent lot number used was: T31E034.

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|----------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|

| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks: No discrepancies, ADR Confirmed

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
VOC internal standard retention times within \pm 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
- 2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
- 3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
- 4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
- 5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

No discrepancies, ADR Confirmed.

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs **Yes** / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date:</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|--------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: No contamination, ADR Confirmed

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If gross contamination exists in blanks (i.e., saturated peaks by GC/MS), all affected compounds in the associated samples should be qualified as unusable (R) due to interference.
5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks: _____

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP) Acceptable Y or N
 All compounds must have an RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____

VOC - Date(s) of continuing calibration: _____

Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: _____

SVOC - Date(s) of continuing calibration: _____

Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks:

NA

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

- Linearity evaluation, are %RSD <20? Yes or No
- Is the RPD between calibration factors ≤25? Yes or No
- Are multicomponent calibration data provided for each analysis date? Yes or No
- Is the difference between columns check ≤ 25%D? Yes or No
- Are 4, 4'- DDT and endrin breakdown (PEM) ≤ 20% and combined breakdown ≤ 30% Yes or No

Deviations:

%D

| Compound | %RSD | RPD | Samples Affected neg ICV |
|---------------------|------|----------------|---|
| Toxaphene (Average) | - | 32.56 | ICV 433303 All ND, no qual spls UJ C05 |
| Toxaphene (Average) | | 26.34 | ICV 433303/34 All ND, no qual |

VI. Blanks (continued)

Calculate action levels based on 5X the highest blank concentration of any given compound
 Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks: _____

VII. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

| | |
|-----------|------------|
| VOC types | SVOC types |
| 70-130 | 45-135 |
| <30 | <50 |

percent recovery (%R)
relative percent difference (RPD)

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is outside limits, qualify all positive values in the unspiked sample as estimated (J)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
4. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
5. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA

VIII. Laboratory Control Sample Information

General LCS Criteria:

| | |
|--------------|---------------|
| VOC types | SVOC types |
| 80-120 | 60-120 |

percent recovery (%R)

Laboratory LCS Identifications:

LCS 280-435507, LCS 435841

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------------|------|----|-------------------------------------|
| 3-nitrotoluene | | 71 | LCS 435507, SEE ADR OUTPUT |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the LCS recovery is outside limits but >10%, qualify all positive values as estimated (J)
- 2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
- 3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
- 4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

SAMPLES WERE PREPPED IN TWO BATCHES, ONLE ONE LCS WAS AFFECTED

LEIDOS
Metals Data Review Checklist

Project: RVAAP

Page 1 of 14

SDG No: J116270

Analysis: Metals

Method: 6010, 6020, 7470

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|---|
| Case Narrative | MS/MSD Recoveries and Differences |
| Analytical Holding Times | Duplicate Relative Percent Differences |
| Sample Preservation | ICP Serial Dilution |
| Method Calibration | Furnace Atomic Absorption QC |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| LCS Recoveries | Internal Standard Performance (if applicable) |

Project specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall remarks: DoD QSM

Some results were qualified due to calibration discrepancies

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: Calibration discrepancies were not noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

Metals - Waters - preserved to pH<2, 180 days from sample collection
 Metals - Soils - 180 days from sample collection
 Mercury - Waters - preserved to pH<2, 28 days from sample collection
 Mercury - Soils - 28 days from sample collection

Deviations:

| Sample # | Metals | | | | Mercury | | | |
|----------|----------------|---------------|----------|----------|----------------|---------------|----------|----------|
| | Date Collected | Date Analyzed | Days >HT | pH Check | Date Collected | Date Analyzed | Days >HT | pH Check |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If preserved samples exceed holding time, qualify all associated results as estimated (J/UJ).
2. If unpreserved samples exceed holding time, qualify all associated results as unusable (R).
3. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
4. If water samples are not acidified, use professional judgement. Minimally, qualify data as estimated (J) and non-detects unusable (R).
5. If soil samples exceed holding time, use professional judgement to qualify data.

Remarks:

All holding times were met

IV. Initial & Continging Calibration (ICP, GFAA, CVAA, etc.)

Initial calibration linearity criteria is $r \geq 0.995$

ICV and CCV criteria are $\pm 10\%$ recovery, low level check standard allowed $\pm 30\%$

ICP inter-element check standard criteria $\pm 20\%$

Deviations:

| Element | Date | Intial Calib. | ICV/ CCV | %R | Samples Affected | |
|-----------|------|---------------|----------|-----|------------------|----------------------------|
| Sodium | | | CCVL | 128 | 436427/67 | 116270-1, 8, 9, 12, 13, 14 |
| Beryllium | | | ICVL | 75 | 437321/11 | None |
| Cadmium | | | CCVL | 121 | 437321/62 | None |
| Nickel | | | CCVL | 125 | ↓ | |
| Nickel | | | CCVL | 127 | 437281/58 | None |
| Vanadium | | | | 126 | | |
| Nickel | | | CCVL | 133 | 437281/70 | None |
| Vanadium | | | | 133 | | |

Actions:

1. If any elements initial claibration linearity is < 0.995 , qualify the data as estimated (J/UJ)
2. If any elements initial claibration linearity is < 0.95 , qualify the data as unusable (R)
- 3a. If any elements ICV or CCV recovery is $< 90\%$, qualify the data as estimated (J/UJ)
- 3b. If any elements ICV or CCV recovery is $> 110\%$, qualify results \geq MDL as estimated (J).

Do not qualify non-detects.

- 4a. If any elements ICV or CCV recovery is $< 75\%$, qualify the data as unusable (R)
- 4b. If any elements ICV or CCV recovery is $> 125\%$ qualify positive results as estimated (J) or non-detects as unusable (R).
- 4c. If any element ICV or CCV recovery is $\geq 160\%$, qualify positive results \geq MDL as unusable (R).

Do not qualify non-detects.

- 5a. If any elements CRI recovery is 50 - 69% (30 - 49% for Sb, Pb, Tb), qualify results \geq MDL (but < 2 times CRQL) as estimated (J/UJ) and results > 2 times CRQL are not qualified.
- 5b. If any elements CRI recovery is $< 50\%$ ($< 30\%$ for Sb, Pb, Ti), qualify results \geq MDL (but < 2 times CRQL) and non-detects as unusable (R). Results > 2 times CRQL are estimated (J).
- 5c. If any elements CRI recovery is $> 130\%$ but $< 180\%$ ($> 150\%$ but $\leq 200\%$ for Sb, Pb, Ti), qualify results \geq MDL (but < 2 times CRQL) as esimated (J). And non-detects and results $\geq 2x$ CRQL are not qualified.
- 5d. If CRI or (R) $> 180\%$ ($> 200\%$ for Sb, Pb, Ti), qualify results that are \geq MDL as unusable (R).

Remarks:

Not included in the ADR output, see Form 1's

IV. Initial & Contining Calibration (ICP, GFAA, CVAA, etc.) (continued)

| | |
|--|----------|
| Analytical Sequence and MS Tune | (Y/N) |
| 1. Were the appropriate number of ICP standards used? | <u>Y</u> |
| 2. Were the appropriate number of AA standards used? | <u>Y</u> |
| 3. Was calibration performed and documented at the beginning of each run? | <u>Y</u> |
| 4. Were calibration check standards run at 10% frequency or every two hours? | <u>Y</u> |
| 5. Were low level standard checks analyzed at approximately 2X the PQL? | <u>Y</u> |
| 6. Was ICP-MS mass calibration within 0.1 AMU? | <u>Y</u> |
| 7. Was ICP-MS % RSD of the aboslute signals for all analytes < 5%? | <u>Y</u> |

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

- 1. If instrument calibration is questionable, use professional judgement, qualify the data as estimated (J/UJ)
- 2. If instrument calibration documentation can not be obtained or is inadequate, qualify the data as unusable (R)
- 3. If mass calibration for ICP-MS was not within 0.1 AMU qualify analyte results as estimated (J/UJ)
- 4. If % RSD for ICP-MS was > 5% for any analyte in the tuning solution, qualify associated results as estimated (J/UJ).

Results:

V. Blanks (ICB, CCB, Method Blank, Equipment Rinsate Blank)**A. Blank Results**

If the blank level is > CRQL for any analyte, check that the analyte's concentration in the samples is > 10 times the blank value. The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account when applying the action level.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times \text{V/W} \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|---------------|----------|---------------------|--------------|--|
| CCB 436427-52 | Sodium | 221 ug/L | 2210 ug/L | 116270-1, 8, 9, 12, 13, 14 |
| CCB 436427/66 | Sodium | 207 ug/L | 2070 ug/L | 116270-1, 8, 9, 12, 13, 14 |
| ICB 437321/10 | Vanadium | 0.856 ug/L | 8.56ug/L | None |
| CCB 437321/61 | Antimony | 0.471 ug/L | 4.71 ug/L | None |
| CCB437281/57 | Vanadium | 1.90 ug/L | 19 ug/L | None |
| CCB 437281/69 | Antimony | 0.525 ug/L | 5.25 ug/L | None |
| | Vanadium | 2.14 ug/L | 21.4 ug/L | None |
| MB 435538 | Vanadium | 0.572 ug/L | 5.72 ug/L | 116270-1, 8, 9, 12, 13, 14 All ND, no qual |
| | | | | |
| | | | | |
| | | | | |

If additional space is required, use next page

Actions:

1. For blank results \geq MDL but \leq CRQL, qualify samples \geq MDL but $<$ CRQL as CRQL U.

Use professional judgement to qualify sample results exceeding the CRQL.

2a. If blank results are $>$ CRQL: For sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ 10 times the blank qualify results as unusable (R) or estimated (J). No action is taken for sample results \geq 10 times the blank levels.

2b. If ICB/ CCB results are $>$ CRQL; for sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ blank results, qualify results as not detected (U) at the level of the blank or unusable (R). Use professional judgement for sample results $>$ blank results.

Remarks:

A MB is not present for 6020A, the lab was notified, resubmitted on 1/3/2019

Not included in the ADR output, see Form 1's

V. Blanks (continued)

The highest blank concentration of observed elements is the action level.
 Sample weights, volumes, and dilution factors must be taken into account.
 Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.
 use the following equation:

$$\text{ug/L} \times V/W \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg}/\text{kg}$$

where: V = volume of samples digest solution (usually 200 mL)
 W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|----------|---------|---------------------|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

V. Blanks (continued)

B. Frequency Requirements

(Y/N)

- 1. Was a method (preparation) blank analyzed for each matrix? Y
- 2. Was a method blank processed for every analytical batch (20 samples)? Y
- 3. Was a calibration blank analyzed at 10% frequency or every two hours? Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Remarks: _____

C. Baseline Shift Evaluation

List the highest negative blank concentration for each analyte observed in laboratory or project blanks.

Deviations:

| Blank ID | Element | Max. Neg Conc. | Action Level | Samples Affected |
|----------|---------|----------------|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If the absolute value of the maximum negative blank result is > the CRQL, qualify positive results as estimated (J) and non-detects as estimated (UJ).

Remarks: _____

VI. Laboratory Control Sample Evaluation

All LCS recovery criteria are set at 80-120%

An LCS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Deviations:

| Element | Date | %R | Matrix | Samples Affected |
|---------|------|----|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any element's LCS recovery is >120%, qualify positive results as (J).
2. If any element's LCS recovery is 50-79%, qualify positive results as (J) and non-detect results as (UJ)
- 3a. If any element's LCS recovery is <50%, qualify positive results as (J) and non-detect results as (R)
- 3b. If the LCS recovery is > 150%, qualify all results as unusable (R).
4. For soil LCS recovery > upper limit, qualify samples results ≥ MDL as estimated (J).
5. For soil LCS recovery < lower limit, qualify results ≥ MDL as esimated (J) and non-detected estimated (UJ).
6. Use professional judgement to qualify data if the LCS frequency criteria are not met.

Remarks:

LCS was not submitted for 6020A, submitted on 1/3/19
 No discrepancies, ADR Confirmed

VII. Matrix Spike Evaluation

All MS recovery criteria are set at 75-125%

An MS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Verify that a field blank or PE sample was not used for spiked sample analysis

Verify that a post-digestion spike was analyzed for those analytes where the pre-digestion spike recovery is outside control limits and the sample result is < 4 times the spike added.

Project Sample(s) Spiked: FWGmw-020-181001-GW

Deviations:

| Element | Spiked Sample Result | Sample Result | Spike Amount | %R | Samples Affected |
|---------|----------------------|---------------|--------------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the sample concentration exceeds the spiking level by a factor of 4X or more, do not qualify the data
2. If the spike recovery is >125%, qualify all positive values as (J).
3. If the spike recovery is between 30-74%, qualify positive values as (J) and non-detect values as estimated (UJ)
4. If the spike recovery is <30%, qualify positive values as (J) and non-detects are qualified unusable (R) if the post-digestion spike recovery is < 75% (or none was performed); non-detects are qualified as estimated (UJ) If the post-digestion spike recovery is ≥ 75%. There is no post-digestion spike performed for mercury.
5. Qualify all samples of similar matrix to the spiked sample in the same manner
6. Use professional judgement to qualify data if the MS frequency criteria are not met.
7. Use professional judgement for qualification of data for unspiked elements

Remarks: No discrepancies, ADR Confirmed

VIII. Laboratory Duplicate Evaluation

Duplicate relative percent difference (RPD) for water is 20% (both results > 5 times CDRL) or < CRDL difference (if either result is < 5 times CRDL) and RPD for soil is 35% (if both results are > 5 times CRDL or < 2 times CRDL if either result is < 5 times CRDL).

When duplicate sample values are both less than the reporting level they are considered acceptable

When duplicate sample values are within 5X the reporting level they are acceptable if their absolute difference is within 3X the reporting level

Verify that a field blank on PE sample was not used for duplicate analysis.

Deviations: _____

| Element | Sample # | Duplicate # | RPD | Samples Affected |
|---------|----------|-------------|-----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If an element's RPD is >20% (water) / >35% (soil), qualify positive results as (J) and non-detect results as (UJ)
2. For low concentrations, if an element's duplicate absolute difference is > 3X the reporting level, qualify positive results as (J) and non-detect results as (UJ)
3. Use professional judgement to qualify data if the duplicate frequency criteria are not met.

Remarks: NA

IX. Inductively Coupled Plasma (ICP) Serial Dilution Analysis

Verify that a field blank or PE sample was not used for serial dilution.

Serial dilution of positive results are performed when values exceed 50X the IDL

Results from serial dilutions should agree within 10% of the original undiluted analysis

Deviations:

| Element | Sample # | Sample Result | Serial Dilution | %D | Action |
|---------|----------|---------------|-----------------|----|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If the serial dilution %D is >10 and the analyte results are >50X the IDL, qualify all positive results as estimated (J) and non-detects as estimated (UJ).

Remarks:

~~No discrepancies, ADR Confirmed~~

X. Furnace Atomic Absorption QC

A. Duplicate Precision

(Y/N)

1. Were duplicate injections performed for all samples? _____
2. Were one point analytical spikes performed for all samples? _____
3. Did duplicate injections agree within $\pm 20\%$? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If duplicate injection results are outside $\pm 20\%$, qualify positive results as (J) and non-detect results as (UJ)

Remarks:

NA

B. Post Digestion Spike Recoveries

(Y/N)

1. Did post digestion spike recoveries meet an 85-115% recovery criteria? Y
2. If spike recoveries did not meet recovery criteria were samples analyzed by MSA? Y
3. If MSA was used to analyze samples, was its' correlation coefficient ≥ 0.995 ? Y

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If post digestion spike recoveries are $>115\%$, qualify positive results as (J) and non-detect results as (U)
2. If post digestion spike recoveries are 11-84%, qualify positive results as (J) and non-detect results as (UJ)
3. If post digestion spike recoveries are $<10\%$, qualify positive results as (R) and non-detect results as (R)
4. If MSA was used to quantitate values and the correlation coefficient was <0.995 , qualify data as (J or UJ)
5. If MSA was used to quantitate values and the correlation coefficient was <0.95 , qualify data as (R)

Remarks:

No discrepancies, ADR Confirmed

XI. Inductively Coupled Plasma (ICP) Interference Check Sample Evaluation

Interference check samples should be analyzed at the beginning and end of each analysis run, or at a minimum of twice per 8 hour working shift.

Results for the ICS solution AB must fall within control limits of 20% for analytes included in the solution. Evaluate the ICS A solution raw data for results with an absolute value \geq MDL for analytes that are not present in the ICS A solution.

Deviations:

| Element | Sample # | Sample Result | Interferent Result | Action |
|---------|----------|---------------|--------------------|--------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If the ICS AB %R for an analyte is > 120%, qualify sample results \geq MDL as estimated (J) and non-detects should not be qualified.
2. If the ICS AB %R for an analyte is 50-79%, qualify sample results that are \geq MDL as estimated (J) and non-detects as estimated (UJ).
3. If the ICS AB %R for an analyte is <50%, qualify all sample results that are \geq MDL and all non-detects as as unusable (R).
4. If results \geq MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences and with analyte concentration that approximate those levels in the ICS A, sample results \geq MDL should be qualified as estimated (J) and non-detects should not be qualified.
5. If negative results with absolute values > MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences, affected sample results > MDL should be qualified as estimated (J) and non-detects (UJ).

Remarks: ICP results met control limits

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J116270

Analysis: Cyanide

Laboratory: Test America

Method: 9012

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH ≥ 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH ≤ 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |
|----------|---------|----------------|----------------|---------------|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks:

All holding times were met

IV. Initial & Continuing Calibration

A blank and at least three standards should be analyzed, with one of the standards being within 2X the MDL

Correlation coefficients must be ≥ 0.995

Initial calibration check recoveries must be within 90-110%

Continuing calibration check recoveries must be within 85-115%

Deviations:

| Compound | Correlation Coefficient | ICV/CCV | %R | Samples Affected |
|----------|-------------------------|---------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any compounds initial calibration linearity is <0.995, qualify the data as estimated (J/UJ)
2. If any compounds initial calibration linearity is <0.95, qualify the data as unusable (R)
3. If ICV or CCV criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If ICV or CCV recoveries fall below 50%, qualify results as unusable (R)

Remarks:

All calibration results met control limits

V. Blanks (Method Blanks and Project Blanks)

An analytical method blank must be analyzed with each batch of samples
 Calculate action levels based on 5X the highest blank concentration of any given analyte
 Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Analyte | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|---------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If analyte results exceed the action levels, the data are not qualified
2. If analyte results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the analyte is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks: MB and CCBs were free from contamination

VI. Laboratory Control Sample Information

Each analyte's LCS % recovery must be within the control limits established by the laboratory
In general LCS % recoveries should all be within 85-115%

Deviations:

| Analyte | Date | %R | Samples Affected/Qualifiers Applied |
|---------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the LCS recovery is outside limits but >10%, qualify all positive values as estimated (J)
- 2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
- 3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
- 4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

All LCS %R met control limits

VII. Matrix Spike Information

Each analyte's Matrix Spike % recovery should be within the laboratory established control limits
In general matrix spike % recoveries should all be within 75-125%

Deviations:

| Analyte | %R | %R Limits | Samples Affected |
|---------|----|--------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the spike recovery is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. Use professional judgement to qualify additional samples in the analytical group based on MS results
4. Use professional judgement for qualification of data for unspiked analytes

Remarks:

MS/MSD %R and RPD results met control limits

VIII. Laboratory Duplicate Information

Each analyte's RPD should be within the laboratory established control limits
In general RPDs should all be within 20%

Deviations:

| Analyte | RPD | RPD Limits | Samples Affected |
|---------|-----|------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

LEIDOS Laboratory Data Verification Checklist

Project: RVAAP Page 1 of 3

SDG No: J116303 **Analyte Group:** VOC, SVOC, PCB, Explosives, Metals, Cyanide
Sample Matrix: Water
EDD (Y/N): _____

Disposition of Data Package: _____
NCR No. (if applicable): _____

1. Case Narrative

| | |
|---|---|
| Read SDG Case Narrative | Y |
| Check Laboratory sample ID vs. Project sample ID lists | Y |
| Check that discussion covers each analytical type included in the SDG | Y |
| Check for identified nonconforming items (e.g., missed holding times, etc.) | Y |

2. Chain-of-Custody (COC)

| | |
|---|---|
| Check COC sample collection, shipping, and receiving dates | Y |
| Check that COC signature blocks are complete | Y |
| Check COC project sample IDs vs. Lab IDs and Result Form IDs | Y |
| Match COC requested analyses with Case Narrative and with data package content (Result Forms) | Y |

3. Analytical Results Form

| | |
|---|---|
| Verify that a Result Form is present for each sample and analysis | Y |
| On each Result Form check: | |
| SDG No. | Y |
| Sample ID | Y |
| Lab ID | Y |
| Date Collected | Y |
| Date Extracted | Y |
| Date Analyzed | Y |
| Result Matrix | Y |
| Result Units | Y |

4. Project Verification

| | |
|--|---|
| Check project analyte list vs. analytes reported | Y |
| Check project requested methods vs. analytical methods performed | Y |
| Check analyte reporting levels vs. project reporting level goals | Y |

5. Analytical Quality Control Information

| | |
|---|----|
| Check for surrogate recovery results (e.g., org. form II) | Y |
| Check for LCS results (e.g., org. form III, inorg. form XII) | Y |
| Check for method blank results (e.g., org. form IV, inorg. form III) | Y |
| Check for MS/MSD results (e.g., inorg. form V) | Y |
| Check for laboratory duplicate results (e.g., inorg. form VI) | NA |
| Check for Method Calibration and Run Documentation | |
| organic: | |
| instrument performance check | Y |
| initial calibration data | Y |
| continuing calibration data | Y |
| internal standard areas | Y |
| internal standard retention times | Y |
| sample clean-up documentation (org. forms V through X) | Y |
| metal: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| method linear range | Y |
| sample run sequence (inorg. forms II, IV, and VIII through XIV) | Y |
| other: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| sample run sequence | Y |

6. Incorrect Information

Identify missing items or incorrect information (i.e., missing forms, unsigned forms, incorrect sample IDs, etc.)

Contact the laboratory or project personnel to obtain missing information or correct information

Document corrections below:

7. Nonconforming Items

Document all nonconforming items that can not be resolved above in a Non-Conformance Report (NCR), complete form, file, and follow-up

| NCR # | Item |

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116303

Analysis: VOC

Method: 8260B

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

"U", not detected at the associated level
"UJ", not detected and associated value estimated
"J", associated value estimated
"R", associated value unusable or analyte identity unfounded
"=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 1/2/19

QA Reviewed by: Richard Stahl

Date: 01/07/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|----------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

- 1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
- 2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

Holding times were met

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
VOC internal standard retention times within ± 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
- 2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
- 3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
- 4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
- 5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes/ No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date:</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|--------------|-----------------|-----------------|-----------------|--------------------|
| 11/10 | MB 280-437124/4 | | Toluene | 0.375 ug/L |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Remarks: TB free from contamination, see ADR....confirmed

IV. System Monitoring Compounds (SMC) Recoveries (VOC, SVOC, Pesticides, PCBs)

List SMC compounds with unacceptable recoveries:

Note: SMC formerly known as surrogates.

Deviations:

| Sample # | VOC | | | SVOC B/N Compounds | | | SVOC Acid Compounds | | | Pest | PCB |
|----------|-----|-----|-----|-----------------------|-----|-----|------------------------|-----|-----|------|-----|
| | TOL | BFB | DCE | NBZ | FBP | TPH | PHL | 2FP | TBP | TCX | DCB |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks: No discrepancies, confirmed with ADR

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
 VOC internal standard retention times within \pm 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
 SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

No discrepancies, confirmed with ADR

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs **Yes** / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date:</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|--------------|-----------------|-----------------|-----------------|--------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Remarks: No discrepancies, confirmed with ADR

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB, DFTPP) Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: 11/12/19
 SVOC - Date(s) of continuing calibration: 11/13/19
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: All ICAL results met control limits

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

Linearity evaluation, are %RSD <20? Yes or No

Is the RPD between calibration factors ≤ 25 ? Yes or No

Are multicomponent calibration data provided for each analysis date? Yes or No

Is the difference between columns check $\leq 25\%D$? Yes or No

Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$ Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks: NA

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

percent recovery (%R)

relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked:

LL10mw-003-181001-GW

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks:

No discrepancies, confirmed with ADR

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS 280-435687

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.
1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
 2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
 3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
 4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
 5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: No discrepancies, confirmed with ADR

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116303

Analysis: PCB

Laboratory: Test America

Method: 8082

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

"U", not detected at the associated level
"UJ", not detected and associated value estimated
"J", associated value estimated
"R", associated value unusable or analyte identity unfounded
"=", compound properly identified and value positive

Reviewed by: Brooke Francis

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

The following samples required a sulfuric acid clean-up, via EPA Method 3665A, to reduce matrix interferences:
 FWGmw-019-181001-GW (280-116303-1), FWGmw-022-181001-GW (280-116303-4), (LCS 280-436278/2-A) and (MB 280-436278/1-A).
 Acid Lot: 161554

The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur:
 FWGmw-019-181001-GW (280-116303-1), FWGmw-022-181001-GW (280-116303-4), (LCS 280-436278/2-A) and (MB 280-436278/1-A).
 The reagent lot number used was: T31E034.

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No results were reanalyzed or diluted

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection

VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection

VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction

SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|----------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

VOC types - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC types - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC types - Soils - preserve/analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC types - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC types - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC types | | SVOC types | | | Notes: |
|----------|----------------|---------------|----------------|----------------|---------------|--------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

Actions:

- 1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
- 2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

All holding times were met

IV. Initial & Continuing Calibration

A blank and five standards should be analyzed, with one of the standards being within 2X the MDL

Correlation coefficients must be ≥ 0.995

The RSD of the calibration factor or the relative response factor (RRF) must be $\leq 20\%$

Continuing calibration %D must be within $\pm 15\%$

Deviations:

| Compound | Correlation Coefficient | % RSD | %D | Samples Affected |
|----------|-------------------------|-------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any compounds initial calibration linearity is <0.995 , qualify the data as estimated (J/UJ)
2. If any compounds initial calibration linearity is <0.95 , qualify the data as unusable (R)
3. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)

Remarks:

Calibration results met control limits

V. Surrogate Recoveries

List surrogate compounds with unacceptable recoveries:

Deviations:

| Sample # | Surrogate ID | % R | QC Limits | Samples Affected |
|----------|--------------|-----|-----------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any surrogate recovery is <10%, qualify all positive results in associated fractions as estimated (J)
- 2. If any surrogate recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
- 3. If surrogate recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
- 4. If surrogate recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
- 6. Use professional judgement to qualify results when surrogate recoveries have been diluted out of spec.

Remarks:

No discrepancies, confirmed with ADR

VI. Blanks

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: No discrepancies, confirmed with ADR

VII. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

| | |
|--------------|---------------|
| VOC types | SVOC types |
| 70-130 | 45-135 |
| <30 | <50 |

percent recovery (%R)
relative percent difference (RPD)

Project Sample(s) Spiked: LL12mw-247-181001-GW

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|--------------|-----|---------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is outside limits, qualify all positive values in the unspiked sample as estimated (J)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
4. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
5. Use professional judgement for qualification of data for unspiked compounds

Remarks: No discrepancies, confirmed with ADR

VIII. Laboratory Control Sample Information

General LCS Criteria:

| | |
|--------------|---------------|
| VOC types | SVOC types |
| 80-120 | 60-120 |

percent recovery (%R)

Laboratory LCS Identifications:

LCS 280-435841

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
- 2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
- 3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
- 4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

No discrepancies, confirmed with ADR

LEIDOS
Metals Data Review Checklist

Project: RVAAP

Page 1 of 14

SDG No: J116303

Analysis: Metals

Method: 6010/6020/7470

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|---|
| Case Narrative | MS/MSD Recoveries and Differences |
| Analytical Holding Times | Duplicate Relative Percent Differences |
| Sample Preservation | ICP Serial Dilution |
| Method Calibration | Furnace Atomic Absorption QC |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| LCS Recoveries | Internal Standard Performance (if applicable) |

Project specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall remarks: DoD QSM

Some results were qualified as non-detect due to calibration blank discrepancies and CCV discrepancies

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

- Metals - Waters - preserved to pH<2, 180 days from sample collection
- Metals - Soils - 180 days from sample collection
- Mercury - Waters - preserved to pH<2, 28 days from sample collection
- Mercury - Soils - 28 days from sample collection

Deviations:

| Sample # | Metals | | | | Mercury | | | |
|----------|----------------|---------------|----------|----------|----------------|---------------|----------|----------|
| | Date Collected | Date Analyzed | Days >HT | pH Check | Date Collected | Date Analyzed | Days >HT | pH Check |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If preserved samples exceed holding time, qualify all associated results as estimated (J/UJ).
2. If unpreserved samples exceed holding time, qualify all associated results as unusable (R).
3. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
4. If water samples are not acidified, use professional judgement. Minimally, qualify data as estimated (J) and non-detects unusable (R).
5. If soil samples exceed holding time, use professional judgement to qualify data.

Remarks:

No holding times were met

IV. Initial & Continging Calibration (ICP, GFAA, CVAA, etc.)

Initial calibration linearity criteria is $r \geq 0.995$

ICV and CCV criteria are $\pm 10\%$ recovery, low level check standard allowed $\pm 30\%$

ICP inter-element check standard criteria $\pm 20\%$

Deviations:

| Element | Date | Intial Calib. | ICV/CCV | %R | Samples Affected | |
|----------|-------|---------------|---------|-----|------------------|---|
| Sodium | 11/6 | | CCVL | 130 | 436427-81 | 116303-5 |
| Sodium | 11/6 | | CCVL | 123 | 436427-95 | 116305-5, 6, 8, 10 |
| Sodium | 11/6 | | CCVL | 121 | 436427-109 | 116303-6, 8, 10 |
| Vanadium | 11/15 | | CCVL | 122 | 437779-131 | none |
| Barium | 11/16 | | ICVL | 78 | 438041-12 | None |
| Vanadium | 11/18 | | CCVL | 79 | 438079-100 | 116303-10 only Be reported from this sequence |
| | | | | | | |
| | | | | | | |

Actions:

1. If any elements initial claibration linearity is < 0.995 , qualify the data as estimated (J/UJ)
2. If any elements initial claibration linearity is < 0.95 , qualify the data as unusable (R)
- 3a. If any elements ICV or CCV recovery is $< 90\%$, qualify the data as estimated (J/UJ)
- 3b. If any elements ICV or CCV recovery is $> 110\%$, qualify results \geq MDL as estimated (J).

Do not qualify non-detects.

- 4a. If any elements ICV or CCV recovery is $< 75\%$, qualify the data as unusable (R)
- 4b. If any elements ICV or CCV recovery is $> 125\%$ qualify positive results as estimated (J) or non-detects as unusable (R).
- 4c. If any element ICV or CCV recovery is $\geq 160\%$, qualify positive results \geq MDL as unusable (R).

Do not qualify non-detects.

- 5a. If any elements CRI recovery is 50 - 69% (30 - 49% for Sb, Pb, Tb), qualify results \geq MDL (but < 2 times CRQL) as estimated (J/UJ) and results > 2 times CRQL are not qualified.
- 5b. If any elements CRI recovery is $< 50\%$ ($< 30\%$ for Sb, Pb, Ti), qualify results \geq MDL (but < 2 times CRQL) and non-detects as unusable (R). Results > 2 times CRQL are estimated (J).
- 5c. If any elements CRI recovery is $> 130\%$ but $< 180\%$ ($> 150\%$ but $\leq 200\%$ for Sb, Pb, Ti), qualify results \geq MDL (but < 2 times CRQL) as esimated (J). And non-detects and results $\geq 2x$ CRQL are not qualified.
- 5d. If CRI or (R) $> 180\%$ ($> 200\%$ for Sb, Pb, Ti), qualify results that are \geq MDL as unusable (R).

Remarks:

IV. Initial & Contining Calibration (ICP, GFAA, CVAA, etc.) (continued)

Analytical Sequence and MS Tune

(Y/N)

- 1. Were the appropriate number of ICP standards used? Y
- 2. Were the appropriate number of AA standards used? Y
- 3. Was calibration performed and documented at the beginning of each run? Y
- 4. Were calibration check standards run at 10% frequency or every two hours? Y
- 5. Were low level standard checks analyzed at approximately 2X the PQL? Y
- 6. Was ICP-MS mass calibration within 0.1 AMU? Y
- 7. Was ICP-MS % RSD of the absolute signals for all analytes < 5%? Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

- 1. If instrument calibration is questionable, use professional judgement, qualify the data as estimated (J/UJ)
- 2. If instrument calibration documentation can not be obtained or is inadequate, qualify the data as unusable (R)
- 3. If mass calibration for ICP-MS was not within 0.1 AMU qualify analyte results as estimated (J/UJ)
- 4. If % RSD for ICP-MS was > 5% for any analyte in the tuning solution, qualify associated results as estimated (J/UJ).

Results:

V. Blanks (ICB, CCB, Method Blank, Equipment Rinsate Blank)**A. Blank Results**

If the blank level is > CRQL for any analyte, check that the analyte's concentration in the samples is > 10 times the blank value. The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account when applying the action level.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times \text{V/W} \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|----------------|-----------|---------------------|--------------|--|
| ccb 436427-80 | Sodium | 156 ug/L | 1560 | 116303-5 |
| CCB 436427-94 | Sodium | 137 ug/L | 1370 | 116303-5, 6, 8, 10 |
| CCB 436427-108 | Sodium | 135 ug/L | 1350 | 116303-6, 8, 10 |
| ICB 437779-14 | Vanadium | 0.547 ug/L | | None |
| CCB 437779-110 | Antimony | 0.471 ug/L | | None |
| | Vanadium | 1.15 ug/L | | |
| CCB 437779-130 | Vanadium | 1.22 ug/L | | None |
| CCB 437779-141 | Beryllium | 0.114 ug/L | 1.14 | 116303-5, 6, 8, 9, 10 Be not reported from this sequence |
| | Antimony | 0.724 ug/L | 7.24 | " samples all U |
| ICB 438041/11 | Antimony | 0.447 ug/L | | None |
| | Vanadium | 0.745 ug/L | | |

If additional space is required, use next page

Actions:

1. For blank results \geq MDL but \leq CRQL, qualify samples \geq MDL but $<$ CRQL as CRQL U.

Use professional judgement to qualify sample results exceeding the CRQL.

2a. If blank results are $>$ CRQL: For sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ 10 times the blank qualify results as unusable (R) or estimated (J). No action is taken for sample results \geq 10 times the blank levels.

2b. If ICB/ CCB results are $>$ CRQL; for sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ blank results, qualify results as not detected (U) at the level of the blank or unusable (R). Use professional judgement for sample results $>$ blank results.

Remarks:

See ADR for MB contamination, no further qualification

CCB contamination was not qualified, see form I's

V. Blanks (continued)

The highest blank concentration of observed elements is the action level.
 Sample weights, volumes, and dilution factors must be taken into account.
 Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.
 use the following equation:

$$\text{ug/L} \times V/W \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)
 W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|---------------|-----------|---------------------|--------------|--|
| CCB 438041/22 | Beryllium | 0.164 ug/L | | 116303-5, 6, 8 used for qual |
| | Vanadium | 1.06 ug/L | | |
| CCB 438041/35 | Antimony | 0.607 ug/L | | 116303-5, 6, 8 not reported from this sequence |
| | Vanadium | 1.29 ug/L | | |
| ICB 438079/7 | Antimony | 0.400 ug/L | | None |
| | Vanadium | 0.534 ug/L | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

V. Blanks (continued)

B. Frequency Requirements

(Y/N)

- 1. Was a method (preparation) blank analyzed for each matrix? Y
- 2. Was a method blank processed for every analytical batch (20 samples)? Y
- 3. Was a calibration blank analyzed at 10% frequency or every two hours? Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Remarks:

C. Baseline Shift Evaluation

List the highest negative blank concentration for each analyte observed in laboratory or project blanks.

Deviations:

| Blank ID | Element | Max. Neg Conc. | Action Level | Samples Affected |
|----------|---------|----------------|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If the absolute value of the maximum negative blank result is > the CRQL, qualify positive results as estimated (J) and non-detects as estimated (UJ).

Remarks:

VI. Laboratory Control Sample Evaluation

All LCS recovery criteria are set at 80-120%

An LCS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Deviations:

| Element | Date | %R | Matrix | Samples Affected |
|---------|------|----|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any element's LCS recovery is >120%, qualify positive results as (J).
2. If any element's LCS recovery is 50-79%, qualify positive results as (J) and non-detect results as (UJ)
- 3a. If any element's LCS recovery is <50%, qualify positive results as (J) and non-detect results as (R)
- 3b. If the LCS recovery is > 150%, qualify all results as unusable (R).
4. For soil LCS recovery > upper limit, qualify samples results ≥ MDL as estimated (J).
5. For soil LCS recovery < lower limit, qualify results ≥ MDL as esimated (J) and non-detected estimated (UJ).
6. Use professional judgement to qualify data if the LCS frequency criteria are not met.

Remarks: No discrepancies, confirmed with ADR

VII. Matrix Spike Evaluation

All MS recovery criteria are set at 75-125%

An MS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Verify that a field blank or PE sample was not used for spiked sample analysis

Verify that a post-digestion spike was analyzed for those analytes where the pre-digestion spike recovery is outside control limits and the sample result is < 4 times the spike added.

Project Sample(s) Spiked: LL10mw-003-181001-GW

Deviations:

| Element | Spiked Sample Result | Sample Result | Spike Amount | %R | Samples Affected |
|---------|----------------------|---------------|--------------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the sample concentration exceeds the spiking level by a factor of 4X or more, do not qualify the data
2. If the spike recovery is >125%, qualify all positive values as (J).
3. If the spike recovery is between 30-74%, qualify positive values as (J) and non-detect values as estimated (UJ)
4. If the spike recovery is <30%, qualify positive values as (J) and non-detects are qualified unusable (R) if the post-digestion spike recovery is < 75% (or none was performed); non-detects are qualified as estimated (UJ) If the post-digestion spike recovery is ≥ 75%. There is no post-digestion spike performed for mercury.
5. Qualify all samples of similar matrix to the spiked sample in the same manner
6. Use professional judgement to qualify data if the MS frequency criteria are not met.
7. Use professional judgement for qualification of data for unspiked elements

Remarks: No discrepancies, confirmed with ADR

VIII. Laboratory Duplicate Evaluation

Duplicate relative percent difference (RPD) for water is 20% (both results > 5 times CDRL) or < CRDL difference (if either result is < 5 times CRDL) and RPD for soil is 35% (if both results are > 5 times CRDL or < 2 times CRDL if either result is < 5 times CRDL).

When duplicate sample values are both less than the reporting level they are considered acceptable

When duplicate sample values are within 5X the reporting level they are acceptable if their absolute difference is within 3X the reporting level

Verify that a field blank on PE sample was not used for duplicate analysis.

Deviations: _____

| Element | Sample # | Duplicate # | RPD | Samples Affected |
|---------|----------|-------------|-----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If an element's RPD is >20% (water) / >35% (soil), qualify positive results as (J) and non-detect results as (UJ)
2. For low concentrations, if an element's duplicate absolute difference is > 3X the reporting level, qualify positive results as (J) and non-detect results as (UJ)
3. Use professional judgement to qualify data if the duplicate frequency criteria are not met.

Remarks: NA

IX. Inductively Coupled Plasma (ICP) Serial Dilution Analysis

Verify that a field blank or PE sample was not used for serial dilution.

Serial dilution of positive results are performed when values exceed 50X the IDL

Results from serial dilutions should agree within 10% of the original undiluted analysis

Deviations:

| Element | Sample # | Sample Result | Serial Dilution | %D | Action |
|---------|----------|---------------|-----------------|----|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the serial dilution %D is >10 and the analyte results are >50X the IDL, qualify all positive results as estimated (J) and non-detects as estimated (UJ).

Remarks:

No discrepancies, confirmed with ADR

X. Furnace Atomic Absorption QC**A. Duplicate Precision**

(Y/N)

1. Were duplicate injections performed for all samples? _____
2. Were one point analytical spikes performed for all samples? _____
3. Did duplicate injections agree within $\pm 20\%$? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If duplicate injection results are outside $\pm 20\%$, qualify positive results as (J) and non-detect results as (UJ)

Remarks:

NA

B. Post Digestion Spike Recoveries

(Y/N)

1. Did post digestion spike recoveries meet an 85-115% recovery criteria? Y
2. If spike recoveries did not meet recovery criteria were samples analyzed by MSA? Y
3. If MSA was used to analyze samples, was its' correlation coefficient ≥ 0.995 ? Y

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If post digestion spike recoveries are $>115\%$, qualify positive results as (J) and non-detect results as (U)
2. If post digestion spike recoveries are 11-84%, qualify positive results as (J) and non-detect results as (UJ)
3. If post digestion spike recoveries are $<10\%$, qualify positive results as (R) and non-detect results as (R)
4. If MSA was used to quantitate values and the correlation coefficient was <0.995 , qualify data as (J or UJ)
5. If MSA was used to quantitate values and the correlation coefficient was <0.95 , qualify data as (R)

Remarks:

No discrepancies, confirmed with ADR

XI. Inductively Coupled Plasma (ICP) Interference Check Sample Evaluation

Interference check samples should be analyzed at the beginning and end of each analysis run,
or at a minimum of twice per 8 hour working shift.

Results for the ICS solution AB must fall within control limits of 20% for analytes included in the solution.
Evaluate the ICS A solution raw data for results with an absolute value \geq MDL for analytes that are not present
in the ICS A solution.

Deviations:

| Element | Sample # | Sample Result | Interferent Result | Action |
|---------|----------|---------------|--------------------|--------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If the ICS AB %R for an analyte is $> 120\%$, qualify sample results \geq MDL as estimated (J) and non-detects should not be qualified.
2. If the ICS AB %R for an analyte is 50-79%, qualify sample results that are \geq MDL as estimated (J) and non-detects as estimated (UJ).
3. If the ICS AB %R for an analyte is $<50\%$, qualify all sample results that are \geq MDL and all non-detects as as unusable (R).
4. If results \geq MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences and with analyte concentration that approximate those levels in the ICS A, sample results \geq MDL should be qualified as estimated (J) and non-detects should not be qualified.
5. If negative results with absolute values $> MDL$ are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences, affected sample results $> MDL$ should be qualified as estimated (J) and non-detects (UJ).

Remarks:

No ICS discrepancies

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J116303

Analysis: Cyanide, Nitrate

Laboratory: Test America

Method: 9012/9056

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 1/2/19

QA Reviewed by: Richard Stahl

Date: 01/07/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: One nitrate result was reported at a dilution

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH \geq 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH \leq 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |
|----------|---------|----------------|----------------|---------------|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks:

Holding times were met

IV. Initial & Continuing Calibration

A blank and at least three standards should be analyzed, with one of the standards being within 2X the MDL
 Correlation coefficients must be ≥ 0.995
 Initial calibration check recoveries must be within 90-110%
 Continuing calibration check recoveries must be within 85-115%

Deviations:

| Compound | Correlation Coefficient | ICV/CCV | %R | Samples Affected |
|----------|-------------------------|---------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any compounds initial calibration linearity is <0.995, qualify the data as estimated (J/UJ)
- 2. If any compounds initial calibration linearity is <0.95, qualify the data as unusable (R)
- 3. If ICV or CCV criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 4. If ICV or CCV recoveries fall below 50%, qualify results as unusable (R)

Remarks:

Cali9bration results met control limits

VI. Laboratory Control Sample Information

Each analyte's LCS % recovery must be within the control limits established by the laboratory
In general LCS % recoveries should all be within 85-115%

Deviations:

| Analyte | Date | %R | Samples Affected/Qualifiers Applied |
|---------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
- 2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
- 3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
- 4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

No discrepancies, confirmed with ADR

VII. Matrix Spike Information

Each analyte's Matrix Spike % recovery should be within the laboratory established control limits
In general matrix spike % recoveries should all be within 75-125%

Deviations:

| Analyte | %R | %R Limits | Samples Affected |
|---------|----|-----------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the spike recovery is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
- 2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
- 3. Use professional judgement to qualify additional samples in the analytical group based on MS results
- 4. Use professional judgement for qualification of data for unspiked analytes

Remarks:

No discrepancies, confirmed with ADR

VIII. Laboratory Duplicate Information

Each analyte's RPD should be within the laboratory established control limits
 In general RPDs should all be within 20%

Deviations:

| Analyte | RPD | RPD Limits | Samples Affected |
|---------|-----|------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

1. Case Narrative

| | |
|---|---|
| Read SDG Case Narrative | Y |
| Check Laboratory sample ID vs. Project sample ID lists | Y |
| Check that discussion covers each analytical type included in the SDG | Y |
| Check for identified nonconforming items (e.g., missed holding times, etc.) | Y |

2. Chain-of-Custody (COC)

| | |
|---|---|
| Check COC sample collection, shipping, and receiving dates | Y |
| Check that COC signature blocks are complete | Y |
| Check COC project sample IDs vs. Lab IDs and Result Form IDs | Y |
| Match COC requested analyses with Case Narrative and with data package content (Result Forms) | Y |

3. Analytical Results Form

| | |
|---|---|
| Verify that a Result Form is present for each sample and analysis | Y |
| On each Result Form check: | |
| SDG No. | Y |
| Sample ID | Y |
| Lab ID | Y |
| Date Collected | Y |
| Date Extracted | Y |
| Date Analyzed | Y |
| Result Matrix | Y |
| Result Units | Y |

4. Project Verification

| | |
|--|---|
| Check project analyte list vs. analytes reported | Y |
| Check project requested methods vs. analytical methods performed | Y |
| Check analyte reporting levels vs. project reporting level goals | Y |

5. Analytical Quality Control Information

| | |
|---|----|
| Check for surrogate recovery results (e.g., org. form II) | Y |
| Check for LCS results (e.g., org. form III, inorg. form XII) | Y |
| Check for method blank results (e.g., org. form IV, inorg. form III) | Y |
| Check for MS/MSD results (e.g., inorg. form V) | NA |
| Check for laboratory duplicate results (e.g., inorg. form VI) | NA |
| Check for Method Calibration and Run Documentation | |
| organic: | |
| instrument performance check | Y |
| initial calibration data | Y |
| continuing calibration data | Y |
| internal standard areas | Y |
| internal standard retention times | Y |
| sample clean-up documentation (org. forms V through X) | Y |
| metal: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| method linear range | Y |
| sample run sequence (inorg. forms II, IV, and VIII through XIV) | Y |
| other: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| sample run sequence | Y |

6. Incorrect Information

Identify missing items or incorrect information (i.e., missing forms, unsigned forms, incorrect sample IDs, etc.)

Contact the laboratory or project personnel to obtain missing information or correct information

Document corrections below:

7. Nonconforming Items

Document all nonconforming items that can not be resolved above in a Non-Conformance Report (NCR), complete form, file, and follow-up

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116336

Analysis: VOC

Laboratory: Test America

Method: 8260B

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 1/4/19

QA Reviewed by: Richard Staeh

Date: 01/08/2019

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP) Acceptable (Y) or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: 10/29
 VOC - Date(s) of continuing calibration: 11/112
 Was the 12 hour criteria met? (Y) or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: No calibration discrepancies for target analytes

VII. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:

| | |
|-----------|------------|
| VOC types | SVOC types |
| 70-130 | 45-135 |
| <30 | <50 |

percent recovery (%R)
relative percent difference (RPD)

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is outside limits, qualify all positive values in the unspiked sample as estimated (J)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
4. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
5. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA

LEIDOS
Metals Data Review Checklist

Project: RVAAP

Page 1 of 14

SDG No: J116336

Analysis: Metals

Method: 6010, 6020, 7470

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|---------------------------|---|
| Case Narrative | MS/MSD Recoveries and Differences |
| Analytical Holding Times | Duplicate Relative Percent Differences |
| Sample Preservation | ICP Serial Dilution |
| Method Calibration | Furnace Atomic Absorption QC |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| LCS Recoveries | Internal Standard Performance (if applicable) |

Project specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall remarks: DoD QSM

Some results were qualified as non-detect due to blank contamination

Some results were qualified as estimated due to calibration discrepancies

Definition of Qualifiers:

"U", not detected at the associated level
"UJ", not detected and associated value estimated
"J", associated value estimated
"R", associated value unusable or analyte identity unfounded
"=", compound properly identified and value positive

III. Holding Times

Metals - Waters - preserved to pH<2, 180 days from sample collection
 Metals - Soils - 180 days from sample collection
 Mercury - Waters - preserved to pH<2, 28 days from sample collection
 Mercury - Soils - 28 days from sample collection

Deviations:

| Sample # | Metals | | | | Mercury | | | |
|----------|----------------|---------------|----------|----------|----------------|---------------|----------|----------|
| | Date Collected | Date Analyzed | Days >HT | pH Check | Date Collected | Date Analyzed | Days >HT | pH Check |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If preserved samples exceed holding time, qualify all associated results as estimated (J/UJ).
2. If unpreserved samples exceed holding time, qualify all associated results as unusable (R).
3. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
4. If water samples are not acidified, use professional judgement. Minimally, qualify data as estimated (J) and non-detects unusable (R).
5. If soil samples exceed holding time, use professional judgement to qualify data.

Remarks:

All holding times were met

IV. Initial & Continuing Calibration (ICP, GFAA, CVAA, etc.)

Initial calibration linearity criteria is $r \geq 0.995$

ICV and CCV criteria are $\pm 10\%$ recovery, low level check standard allowed $\pm 30\%$

ICP inter-element check standard criteria $\pm 20\%$

Deviations:

| Element | Date | Initial Calib. | ICV/CCV | %R | Samples Affected |
|-----------|---------|----------------|---------|-----|--------------------|
| Calcium | 11/7/18 | | CCVL | 172 | 436619/26 None |
| Sodium | | | | 127 | |
| Aluminum | | | | 123 | |
| Sodium | 11/7/18 | | CCVL | 122 | 436619/40 None |
| Aluminum | | | | 121 | |
| Sodium | 11/7/18 | | CCVL | 122 | 436619/52 116336-6 |
| Sodium | 11/7/18 | | CCVL | 121 | 436619/65 116336-6 |
| Magnesium | 11/7/18 | | ICVL | 126 | 436767/11 None |

Actions:

1. If any elements initial calibration linearity is < 0.995 , qualify the data as estimated (J/UJ)
2. If any elements initial calibration linearity is < 0.95 , qualify the data as unusable (R)
- 3a. If any elements ICV or CCV recovery is $< 90\%$, qualify the data as estimated (J/UJ)
- 3b. If any elements ICV or CCV recovery is $> 110\%$, qualify results \geq MDL as estimated (J).
Do not qualify non-detects.
- 4a. If any elements ICV or CCV recovery is $< 75\%$, qualify the data as unusable (R)
- 4b. If any elements ICV or CCV recovery is $> 125\%$ qualify positive results as estimated (J) or non-detects as unusable (R).
- 4c. If any element ICV or CCV recovery is $\geq 160\%$, qualify positive results \geq MDL as unusable (R).
Do not qualify non-detects.
- 5a. If any elements CRI recovery is 50 - 69% (30 - 49% for Sb, Pb, Tl), qualify results \geq MDL (but < 2 times CRQL) as estimated (J/UJ) and results > 2 times CRQL are not qualified.
- 5b. If any elements CRI recovery is $< 50\%$ ($< 30\%$ for Sb, Pb, Tl), qualify results \geq MDL (but < 2 times CRQL) and non-detects as unusable (R). Results > 2 times CRQL are estimated (J).
- 5c. If any elements CRI recovery is $> 130\%$ but $< 180\%$ ($> 150\%$ but $\leq 200\%$ for Sb, Pb, Tl), qualify results \geq MDL (but < 2 times CRQL) as estimated (J). And non-detects and results $\geq 2x$ CRQL are not qualified.
- 5d. If CRI or (R) $> 180\%$ ($> 200\%$ for Sb, Pb, Tl), qualify results that are \geq MDL as unusable (R).

Remarks: _____

V. Blanks (ICB, CCB, Method Blank, Equipment Rinsate Blank)**A. Blank Results**

If the blank level is > CRQL for any analyte, check that the analyte's concentration in the samples is > 10 times the blank value. The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account when applying the action level.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times V/W \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|----------------|-----------|---------------------|--------------|------------------------|
| CCB 436619/25 | Calcium | 43.7 ug/L | / | None |
| | Sodium | 316 ug/L | | ↓ |
| CCB436619/39 | Sodium | 173 ug/L | | None |
| CCB 436619/51 | Sodium | 186 ug/L | 1860 | 116336-6 |
| CCB 436619/64 | Sodium | 197 ug/L | 1970 | 116336-6 |
| CCB 436427/80 | Sodium | 156 ug/L | — | None |
| CCB 436427/94 | Sodium | 137 ug/L | 1370 | 116336-3, 6, 7, 12 |
| CCB 436427/108 | Sodium | 135 ug/L | 1350 | 116336-3, 6, 7, 12, 13 |
| CCB 436427/122 | Sodium | 137 ug/L | 1370 | 116336-13 |
| ICB 436784/9 | Vanadium | 0.998 ug/L | — | None |
| CCB 436784/177 | Beryllium | 0.086 ug/L | 0.86 | 116336-6 |
| | Vanadium | 1.84 ug/L | 18.4 | ↓ |

If additional space is required, use next page

Actions:

1. For blank results \geq MDL but \leq CRQL, qualify samples \geq MDL but $<$ CRQL as CRQL U.

Use professional judgement to qualify sample results exceeding the CRQL.

2a. If blank results are $>$ CRQL: For sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ 10 times the blank qualify results as unusable (R) or estimated (J). No action is taken for sample results \geq 10 times the blank levels.

2b. If ICB/ CCB results are $>$ CRQL; for sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ blank results, qualify results as not detected (U) at the level of the blank or unusable (R). Use professional judgement for sample results $>$ blank results.

Remarks:

MB contamination included in the ADR report

CCV contamination was not qualified by ADR

V. Blanks (continued)

The highest blank concentration of observed elements is the action level.
 Sample weights, volumes, and dilution factors must be taken into account.
 Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.
 use the following equation:

$$\text{ug/L} \times V/W \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)
 W = weight of sample digested (usually 1 g)

Deviations:

reviewed total vs dissolved for qualifiers

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

V. Blanks (continued)

B. Frequency Requirements

(Y/N)

- 1. Was a method (preparation) blank analyzed for each matrix? Y
- 2. Was a method blank processed for every analytical batch (20 samples)? Y
- 3. Was a calibration blank analyzed at 10% frequency or every two hours? Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Remarks: _____

C. Baseline Shift Evaluation

List the highest negative blank concentration for each analyte observed in laboratory or project blanks.

Deviations:

| Blank ID | Element | Max. Neg Conc. | Action Level | Samples Affected |
|----------|---------|----------------|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If the absolute value of the maximum negative blank result is > the CRQL, qualify positive results as estimated (J) and non-detects as estimated (UJ).

Remarks: _____

VII. Matrix Spike Evaluation

All MS recovery criteria are set at 75-125%

An MS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Verify that a field blank or PE sample was not used for spiked sample analysis

Verify that a post-digestion spike was analyzed for those analytes where the pre-digestion spike recovery is outside control limits and the sample result is < 4 times the spike added.

Project Sample(s) Spiked: LL12mw-242-181001-GW

Deviations:

| Element | Spiked Sample Result | Sample Result | Spike Amount | %R | Samples Affected |
|---------|----------------------|---------------|--------------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the sample concentration exceeds the spiking level by a factor of 4X or more, do not qualify the data
2. If the spike recovery is >125%, qualify all positive values as (J).
3. If the spike recovery is between 30-74%, qualify positive values as (J) and non-detect values as estimated (UJ)
4. If the spike recovery is <30%, qualify positive values as (J) and non-detects are qualified unusable (R) if the post-digestion spike recovery is < 75% (or none was performed); non-detects are qualified as estimated (UJ) If the post-digestion spike recovery is ≥ 75%. There is no post-digestion spike performed for mercury.
5. Qualify all samples of similar matrix to the spiked sample in the same manner
6. Use professional judgement to qualify data if the MS frequency criteria are not met.
7. Use professional judgement for qualification of data for unspiked elements

Remarks: No discrepancies, ADR confirmed

VIII. Laboratory Duplicate Evaluation

Duplicate relative percent difference (RPD) for water is 20% (both results > 5 times CDRL) or < CRDL difference (if either result is < 5 times CRDL) and RPD for soil is 35% (if both results are > 5 times CRDL or < 2 times CRDL if either result is < 5 times CRDL).

When duplicate sample values are both less than the reporting level they are considered acceptable

When duplicate sample values are within 5X the reporting level they are acceptable if their absolute difference is within 3X the reporting level

Verify that a field blank on PE sample was not used for duplicate analysis.

Deviations: _____

| Element | Sample # | Duplicate # | RPD | Samples Affected |
|---------|----------|-------------|-----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If an element's RPD is >20% (water) / >35% (soil), qualify positive results as (J) and non-detect results as (UJ)
2. For low concentrations, if an element's duplicate absolute difference is > 3X the reporting level, qualify positive results as (J) and non-detect results as (UJ)
3. Use professional judgement to qualify data if the duplicate frequency criteria are not met.

Remarks: NA

IX. Inductively Coupled Plasma (ICP) Serial Dilution Analysis

Verify that a field blank or PE sample was not used for serial dilution.

Serial dilution of positive results are performed when values exceed 50X the IDL

Results from serial dilutions should agree within 10% of the original undiluted analysis

Deviations:

| Element | Sample # | Sample Result | Serial Dilution | %D | Action |
|---------|----------|---------------|-----------------|----|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If the serial dilution %D is >10 and the analyte results are >50X the IDL, qualify all positive results as estimated (J) and non-detects as estimated (UJ).

Remarks:

No serial dilutions calculated

X. Furnace Atomic Absorption QC**A. Duplicate Precision**

(Y/N)

1. Were duplicate injections performed for all samples? _____
2. Were one point analytical spikes performed for all samples? _____
3. Did duplicate injections agree within $\pm 20\%$? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If duplicate injection results are outside $\pm 20\%$, qualify positive results as (J) and non-detect results as (UJ)

Remarks:

NA

B. Post Digestion Spike Recoveries

(Y/N)

1. Did post digestion spike recoveries meet an 85-115% recovery criteria? _____
2. If spike recoveries did not meet recovery criteria were samples analyzed by MSA? _____
3. If MSA was used to analyze samples, was its' correlation coefficient ≥ 0.995 ? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If post digestion spike recoveries are $>115\%$, qualify positive results as (J) and non-detect results as (U)
2. If post digestion spike recoveries are 11-84%, qualify positive results as (J) and non-detect results as (UJ)
3. If post digestion spike recoveries are $<10\%$, qualify positive results as (R) and non-detect results as (R)
4. If MSA was used to quantitate values and the correlation coefficient was <0.995 , qualify data as (J or UJ)
5. If MSA was used to quantitate values and the correlation coefficient was <0.95 , qualify data as (R)

Remarks:

No discrepancies, ADR confirmed

XI. Inductively Coupled Plasma (ICP) Interference Check Sample Evaluation

Interference check samples should be analyzed at the beginning and end of each analysis run, or at a minimum of twice per 8 hour working shift.

Results for the ICS solution AB must fall within control limits of 20% for analytes included in the solution. Evaluate the ICS A solution raw data for results with an absolute value \geq MDL for analytes that are not present in the ICS A solution.

Deviations:

| Element | Sample # | Sample Result | Interferent Result | Action |
|---------|----------|---------------|--------------------|--------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If the ICS AB %R for an analyte is $> 120\%$, qualify sample results \geq MDL as estimated (J) and non-detects should not be qualified.
2. If the ICS AB %R for an analyte is $50-79\%$, qualify sample results that are \geq MDL as estimated (J) and non-detects as estimated (UJ).
3. If the ICS AB %R for an analyte is $<50\%$, qualify all sample results that are \geq MDL and all non-detects as unusable (R).
4. If results \geq MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences and with analyte concentration that approximate those levels in the ICS A, sample results \geq MDL should be qualified as estimated (J) and non-detects should not be qualified.
5. If negative results with absolute values $> MDL$ are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences, affected sample results $> MDL$ should be qualified as estimated (J) and non-detects (UJ).

Remarks: All ICS results met control limits

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH ≥ 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH ≤ 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |
|----------|---------|----------------|----------------|---------------|--------|

| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks:

See ADR output for missed holding times

IV. Initial & Continuing Calibration

A blank and at least three standards should be analyzed, with one of the standards being within 2X the MDL
Correlation coefficients must be ≥ 0.995
Initial calibration check recoveries must be within 90-110%
Continuing calibration check recoveries must be within 85-115%

Deviations:

| Compound | Correlation Coefficient | ICV/CCV | %R | Samples Affected |
|----------|-------------------------|---------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any compounds initial calibration linearity is <0.995, qualify the data as estimated (J/UJ)
- 2. If any compounds initial calibration linearity is <0.95, qualify the data as unusable (R)
- 3. If ICV or CCV criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 4. If ICV or CCV recoveries fall below 50%, qualify results as unusable (R)

Remarks:

Calibration results met control limits

V. Blanks (Method Blanks and Project Blanks)

An analytical method blank must be analyzed with each batch of samples

Calculate action levels based on 5X the highest blank concentration of any given analyte

Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Analyte | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|---------|-------------------------------|--------------------|-------------------|
| Nitrate | 0.0433 mg/L | 0.2165 | ICB |
| Nitrate | 0.044 mg/L | 0.220 | CCB 11:11 |
| Nitrate | 0.0433 mg/L | 0.2165 | CCB 21:18 |
| Sulfate | 0.252 mg/L | 1.260 | ICB No qual |
| Sulfate | 0.245 mg/L | 1.225 | CCB 11:11 No qual |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If analyte results exceed the action levels, the data are not qualified
2. If analyte results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the analyte is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

MB contamination included in ADR output
ADR did not qualify based on continuing calibration blank

VI. Laboratory Control Sample Information

Each analyte's LCS % recovery must be within the control limits established by the laboratory
In general LCS % recoveries should all be within 85-115%

Deviations:

| Analyte | Date | %R | Samples Affected/Qualifiers Applied |
|---------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
- 2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
- 3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
- 4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

No discrepancies, ADR confirmed

VII. Matrix Spike Information

Each analyte's Matrix Spike % recovery should be within the laboratory established control limits
In general matrix spike % recoveries should all be within 75-125%

Deviations:

| Analyte | %R | %R Limits | Samples Affected |
|---------|----|-----------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the spike recovery is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
- 2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
- 3. Use professional judgement to qualify additional samples in the analytical group based on MS results
- 4. Use professional judgement for qualification of data for unspiked analytes

Remarks:

No discrepancies, ADR confirmed

VIII. Laboratory Duplicate Information

Each analyte's RPD should be within the laboratory established control limits
In general RPDs should all be within 20%

Deviations:

| Analyte | RPD | RPD Limits | Samples Affected |
|---------|-----|---------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the RPD is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
- 2. Use professional judgement to qualify additional samples in the analytical group based on RPD results
- 3. Use professional judgement for qualification of data when laboratory duplicates were not analyzed

Remarks:

NA

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J116336

Analysis: Hexa Chromium

Laboratory: Test America

Method: 7196

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: Laboratory Control Limits

No results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: *Brooke Francis*

Date: 1/7/19

QA Reviewed by: *Richard Stach*

Date: 01/08/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH ≥ 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH ≤ 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |
|----------|---------|----------------|----------------|---------------|--------|
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks:

Holding time was met

IV. Initial & Continuing Calibration

A blank and at least three standards should be analyzed, with one of the standards being within 2X the MDL

Correlation coefficients must be ≥ 0.995

Initial calibration check recoveries must be within 90-110%

Continuing calibration check recoveries must be within 85-115%

Deviations:

| Compound | Correlation Coefficient | ICV/CCV | %R | Samples Affected |

| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If analyte results exceed the action levels, the data are not qualified
2. If analyte results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the analyte is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

MB was free from contamination

VI. Laboratory Control Sample Information

Each analyte's LCS % recovery must be within the control limits established by the laboratory
 In general LCS % recoveries should all be within 85-115%

Deviations:

| Analyte | Date | %R | Samples Affected/Qualifiers Applied |
|---------|------|----|-------------------------------------|

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the spike recovery is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. Use professional judgement to qualify additional samples in the analytical group based on MS results
4. Use professional judgement for qualification of data for unspiked analytes

Remarks:

NA

VIII. Laboratory Duplicate Information

Each analyte's RPD should be within the laboratory established control limits
In general RPDs should all be within 20%

Deviations:

| Analyte | RPD | RPD Limits | Samples Affected |
|---------|-----|------------|------------------|
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If the RPD is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
- 2. Use professional judgement to qualify additional samples in the analytical group based on RPD results
- 3. Use professional judgement for qualification of data when laboratory duplicates were not analyzed

Remarks:

NA

Note: Manual data validation qualifiers are applied to specific data points as a result of outlier QC results as indicated on the Form I, followed by a reason code that identifies the nature of the QC outlier. Except where qualified separately by ADR.net; in the absence of an annotated data validation qualifier, it is understood that the laboratory qualifier is the final data validation qualifier

Laboratory Data Verification Checklist

Project: RVAAP

Page 1 of 3

SDG No: J116407

Analyte Group: SVOC, PAH, Explosives, Metals, Wet Chem

Sample Matrix: Water

EDD (Y/N): _____

Disposition of Data Package: _____

NCR No. (if applicable): _____

1. Case Narrative

Read SDG Case Narrative Y

Check Laboratory sample ID vs. Project sample ID lists Y

Check that discussion covers each analytical type included in the SDG Y

Check for identified nonconforming items (e.g., missed holding times, etc.) Y

2. Chain-of-Custody (COC)

Check COC sample collection, shipping, and receiving dates Y

Check that COC signature blocks are complete Y

Check COC project sample IDs vs. Lab IDs and Result Form IDs Y

Match COC requested analyses with Case Narrative and with data package content (Result Forms) Y

3. Analytical Results Form

Verify that a Result Form is present for each sample and analysis Y

On each Result Form check:

SDG No. Y

Sample ID Y

Lab ID Y

Date Collected Y

Date Extracted Y

Date Analyzed Y

Result Matrix Y

Result Units Y

4. Project Verification

| | |
|--|---|
| Check project analyte list vs. analytes reported | Y |
| Check project requested methods vs. analytical methods performed | Y |
| Check analyte reporting levels vs. project reporting level goals | Y |

5. Analytical Quality Control Information

| | |
|---|---|
| Check for surrogate recovery results (e.g., org. form II) | Y |
| Check for LCS results (e.g., org. form III, inorg. form XII) | Y |
| Check for method blank results (e.g., org. form IV, inorg. form III) | Y |
| Check for MS/MSD results (e.g., inorg. form V) | Y |
| Check for laboratory duplicate results (e.g., inorg. form VI) | Y |
| Check for Method Calibration and Run Documentation | |
| organic: instrument performance check | Y |
| initial calibration data | Y |

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116407

Analysis: SVOC/PAH

Laboratory: Test America

Method: 8270/SIM

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP) Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

11/12 SVOC 11/7 SIM
 11/14/18 11/8

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: Calibration results met control limits

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

- Linearity evaluation, are %RSD <20? Yes or No
- Is the RPD between calibration factors ≤ 25 ? Yes or No
- Are multicomponent calibration data provided for each analysis date? Yes or No
- Is the difference between columns check $\leq 25\%D$? Yes or No
- Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$ Yes or No

| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks: NA

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:
 percent recovery (%R)
 relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: _____

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks: NA

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications:

LCS 280-436342 LCS 280-436346

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

- 1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
- 2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
- 3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
- 4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
- 5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

No discrepancies, ADR confirmed

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | MS/MSD Recoveries and Differences |
| Sample Preservation | LCS Recoveries |
| Method Calibration | Re-analysis and Secondary Dilution |
| Method and Project Blanks | |

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: *Brooke Francis*

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

VOC types - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC types - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC types - Soils - preserve/analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC types - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC types - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC types | | SVOC types | | | Notes: |
|----------|----------------|---------------|----------------|----------------|---------------|--------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | |

| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

Actions:

- 1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
- 2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

All holding times were met

MNX not target

IV. Initial & Continuing Calibration

A blank and five standards should be analyzed, with one of the standards being within 2X the MDL

Correlation coefficients must be ≥ 0.995

The RSD of the calibration factor or the relative response factor (RRF) must be $\leq 20\%$

Continuing calibration %D must be within $\pm 15\%$

Deviations:

| Compound | Correlation Coefficient | % RSD | %D | Samples Affected |
|----------|-------------------------|-------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any compounds initial calibration linearity is <0.995, qualify the data as estimated (J/UJ)
2. If any compounds initial calibration linearity is <0.95, qualify the data as unusable (R)
3. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)

Remarks:

Calibration results met control limits

V. Surrogate Recoveries

List surrogate compounds with unacceptable recoveries:

Deviations:

| Sample # | Surrogate ID | % R | QC Limits | Samples Affected |
|----------|--------------|-----|-----------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any surrogate recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any surrogate recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If surrogate recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If surrogate recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
6. Use professional judgement to qualify results when surrogate recoveries have been diluted out of spec.

Remarks:

No discrepancies, ADR confirmed

VI. Blanks

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|-------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |

Metals Data Review Checklist

Project: RVAAP

Page 1 of 14

SDG No: J116407

Analysis: Metals

Laboratory: Test America

Method: 6010/6020/7470

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|---|
| Case Narrative | MS/MSD Recoveries and Differences |
| Analytical Holding Times | Duplicate Relative Percent Differences |
| Sample Preservation | ICP Serial Dilution |
| Method Calibration | Furnace Atomic Absorption QC |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| LCS Recoveries | Internal Standard Performance (if applicable) |

Project specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall remarks: DoD QSM

~~Some results were not~~ qualified as non-detect due to calibration blanks

~~Some results were not~~ qualified as estimated due to calibration discrepancies

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

| | | | | | | | | |

Actions:

1. If preserved samples exceed holding time, qualify all associated results as estimated (J/UJ).
2. If unpreserved samples exceed holding time, qualify all associated results as unusable (R).
3. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
4. If water samples are not acidified, use professional judgement. Minimally, qualify data as estimated (J) and non-detects unusable (R).
5. If soil samples exceed holding time, use professional judgement to qualify data.

Remarks:

All holding times were met

IV. Initial & Contining Calibration (ICP, GFAA, CVAA, etc.)

Initial calibration linearity criteria is $r \geq 0.995$

ICV and CCV criteria are $\pm 10\%$ recovery, low level check standard allowed $\pm 30\%$

ICP inter-element check standard criteria $\pm 20\%$

Deviations:

| Element | Date | Intial Calib. | ICV/CCV | %R | Samples Affected | |
|----------|------|---------------|---------|-----|------------------|-----------------------|
| Sodium | 11/7 | | CCV | 111 | 436619/38 | None |
| Calcium | 11/7 | | CCVL | 172 | 436619-26 | None NONE IN SEQUENCE |
| Sodium | ↓ | | | 127 | ↓ | |
| Aluminum | ↓ | | | 123 | ↓ | |
| Sodium | 11/7 | | CCVL | 122 | 436619/40 | None |
| Aluminum | ↓ | | | 121 | ↓ | |
| Sodium | 11/7 | | CCVL | 122 | 436619/52 | 116407-5 (diss) |
| Sodium | 11/7 | | CCVL | 121 | 436619/65 | 116407-5 (diss) |

Actions:

1. If any elements initial claibration linearity is <0.995 , qualify the data as estimated (J/UJ)
2. If any elements initial claibration linearity is <0.95 , qualify the data as unusable (R)
- 3a. If any elements ICV or CCV recovery is $<90\%$, qualify the data as estimated (J/UJ)
- 3b. If any elements ICV or CCV recovery is $> 110\%$, qualify results \geq MDL as estimated (J).
Do not qualify non-detects.
- 4a. If any elements ICV or CCV recovery is $<75\%$, qualify the data as unusable (R)
- 4b. If any elements ICV or CCV recovery is $> 125\%$ qualify positive results as estimated (J) or non-detects as unusable (R).
- 4c. If any element ICV or CCV recovery is $\geq 160\%$, qualify positive results \geq MDL as unusable (R).
Do not qualify non-detects.
- 5a. If any elements CRI recovery is 50 - 69% (30 - 49% for Sb, Pb, Tb), qualify results \geq MDL (but < 2 times CRQL) as estimated (J/UJ) and results > 2 times CRQL are not qualified.
- 5b. If any elements CRI recovery is $< 50\%$ ($<30\%$ for Sb, Pb, TI), qualify results \geq MDL (but < 2 times CRQL) and non-detects as unusable (R). Results > 2 times CRQL are estimated (J).
- 5c. If any elements CRI recovery is $> 130\%$ but $< 180\%$ ($>150\%$ but $\leq 200\%$ for Sb, Pb, TI), qualify results \geq MDL (but < 2 times CRQL) as esimated (J). And non-detects and results $\geq 2x$ CRQL are not qualified.
- 5d. If CRI or (R) $> 180\%$ ($> 200\%$ for Sb, Pb, Ti), qualify results that are \geq MDL as unusable (R).

Remarks:

IV. Initial & Contining Calibration (ICP, GFAA, CVAA, etc.) (continued)

Analytical Sequence and MS Tune

(Y/N)

- | | |
|--|---|
| 1. Were the appropriate number of ICP standards used? | Y |
| 2. Were the appropriate number of AA standards used? | Y |
| 3. Was calibration performed and documented at the beginning of each run? | Y |
| 4. Were calibration check standards run at 10% frequency or every two hours? | Y |
| 5. Were low level standard checks analyzed at approximately 2X the PQL? | Y |
| 6. Was ICP-MS mass calibration within 0.1 AMU? | Y |
| 7. Was ICP-MS % RSD of the absolute signals for all analytes < 5%? | Y |

Deviations:

| Element | Deviation | Samples Affected | |
|-----------|-----------|------------------|-------------|
| Manganese | 126% | ICV 436767/11 | None |
| Sodium | 122% | CCVL 436791/52 | 116407-5, 6 |

| Manganese | 126% | CCVL 437566/148 | 116407-5, 6 |
| | | | |

Actions:

1. If instrument calibration is questionable, use professional judgement, qualify the data as estimated (J/UJ)
2. If instrument calibration documentation can not be obtained or is inadequate, qualify the data as unusable (R)
3. If mass calibration for ICP-MS was not within 0.1 AMU qualify analyte results as estimated (J/UJ)
4. If % RSD for ICP-MS was > 5% for any analyte in the tuning solution, qualify associated results as estimated (J/UJ).

Results:

Calibration discrepancies were not noted by ADR

V. Blanks (ICB, CCB, Method Blank, Equipment Rinsate Blank)**A. Blank Results**

If the blank level is > CRQL for any analyte, check that the analyte's concentration in the samples is > 10 times the blank value. The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account when applying the action level.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times \text{V/W} \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|---------------------------|------------------|---------------------|--------------|------------------|
| ccb 436619/25 | Caclium | 43.7ug/L | | None |
| | Sodium | 316 ug/L | | ↓ |
| ccb 436619/39 | Sodium | 173 ug/L | | None |
| ccb 436619/51 | Sodium | 186 ug/L | 1860 | 116407-5 |
| ccb 436619/64 | Sodium | 197 ug/L | 1970 | 116407-5 |
| CCB 436791/51 | Sodium | 135 ug/L | 1350 | 116407-5, 6 |
| CCB 436791/79 | Sodium | 400 ug/L | | None |
| | Potassium | 326 ug/L | | ↓ |
| ICB 437321/10 | Vanadium | 0.856 ug/L | | None |
| CCB 437321/167 | Vanadium | 0.603 ug/L | 6.03 ug/L | 116407-5 (diss) |
| CCB 436791/178 | Beryllium 437321 | 0.120 ug/L | 1.20 ug/L | 116407-5 (diss) |
| | Vanadium ↓ | 0.669 ug/L | 6.69 ug/L | ↓ |

If additional space is required, use next page

Actions:

1. For blank results \geq MDL but \leq CRQL, qualify samples \geq MDL but $<$ CRQL as CRQL U.

Use professional judgement to qualify sample results exceeding the CRQL.

2a. If blank results are $>$ CRQL: For sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ 10 times the blank qualify results as unusable (R) or estimated (J). No action is taken for sample results \geq 10 times the blank levels.

2b. If ICB/ CCB results are $>$ CRQL; for sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ blank results, qualify results as not detected (U) at the level of the blank or unusable (R). Use professional judgement for sample results $>$ blank results.

Remarks:

MB contamination included in ADR qualifiers, CCB contamination qualifiers added to Form 1's

V. Blanks (continued)

The highest blank concentration of observed elements is the action level.
 Sample weights, volumes, and dilution factors must be taken into account.
 Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.
 use the following equation:

$$\text{ug/L} \times \text{V/W} \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)
 W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|----------------|-----------|---------------------|--------------|-------------------------|
| ICB 437566/8 | Vanadium | 1.20 ug/L | / | None |
| CCB 437566/135 | Antimony | 0.541 ug/L | | None |
| | Beryllium | 0.156 ug/L | | ↓ |
| | Vanadium | 0.789 ug/L | | ↓ |

V. Blanks (continued)

B. Frequency Requirements

(Y/N)

1. Was a method (preparation) blank analyzed for each matrix? Y
2. Was a method blank processed for every analytical batch (20 samples)? Y
3. Was a calibration blank analyzed at 10% frequency or every two hours? Y

Deviations:

| Element | Deviation | Samples Affected |
|---------|-----------|------------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Remarks:

C. Baseline Shift Evaluation

List the highest negative blank concentration for each analyte observed in laboratory or project blanks.

Deviations:

| Blank ID | Element | Max. Neg Conc. | Action Level | Samples Affected |
|----------|---------|----------------|--------------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If the absolute value of the maximum negative blank result is > the CRQL, qualify positive results as estimated (J) and non-detects as estimated (UJ).

Remarks:

VI. Laboratory Control Sample Evaluation

All LCS recovery criteria are set at 80-120%

An LCS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Deviations:

| Element | Date | %R | Matrix | Samples Affected |
|---------|------|----|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If any element's LCS recovery is >120%, qualify positive results as (J).
2. If any element's LCS recovery is 50-79%, qualify positive results as (J) and non-detect results as (UJ)
- 3a. If any element's LCS recovery is <50%, qualify positive results as (J) and non-detect results as (R)
- 3b. If the LCS recovery is > 150%, qualify all results as unusable (R).
4. For soil LCS recovery > upper limit, qualify samples results \geq MDL as estimated (J).
5. For soil LCS recovery < lower limit, qualify results \geq MDL as esimated (J) and non-detected estimated (UJ).
6. Use professional judgement to qualify data if the LCS frequency criteria are not met.

Remarks: No discrepancies, ADR confirmed

VII. Matrix Spike Evaluation

All MS recovery criteria are set at 75-125%

An MS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Verify that a field blank or PE sample was not used for spiked sample analysis

Verify that a post-digestion spike was analyzed for those analytes where the pre-digestion spike recovery is outside control limits and the sample result is < 4 times the spike added.

Project Sample(s) Spiked: LL12mw-245-181001-GW

Deviations:

| Element | Spiked Sample Result | Sample Result | Spike Amount | %R | Samples Affected |
|---------|----------------------|---------------|--------------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the sample concentration exceeds the spiking level by a factor of 4X or more, do not qualify the data
2. If the spike recovery is >125%, qualify all positive values as (J).
3. If the spike recovery is between 30-74%, qualify positive values as (J) and non-detect values as estimated (UJ)
4. If the spike recovery is <30%, qualify positive values as (J) and non-detects are qualified unusable (R) if the post-digestion spike recovery is < 75% (or none was performed); non-detects are qualified as estimated (UJ) If the post-digestion spike recovery is ≥ 75%. There is no post-digestion spike performed for mercury.
5. Qualify all samples of similar matrix to the spiked sample in the same manner
6. Use professional judgement to qualify data if the MS frequency criteria are not met.
7. Use professional judgement for qualification of data for unspiked elements

Remarks: Discrepancies noted in the ADR output and qualified accordingly

VIII. Laboratory Duplicate Evaluation

Duplicate relative percent difference (RPD) for water is 20% (both results > 5 times CDRL) or < CRDL difference (if either result is < 5 times CRDL) and RPD for soil is 35% (if both results are > 5 times CRDL or < 2 times CRDL if either result is < 5 times CRDL).

When duplicate sample values are both less than the reporting level they are considered acceptable

When duplicate sample values are within 5X the reporting level they are acceptable if their absolute difference is within 3X the reporting level

Verify that a field blank on PE sample was not used for duplicate analysis.

Deviations: _____

| Element | Sample # | Duplicate # | RPD | Samples Affected |
|---------|----------|-------------|-----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If an element's RPD is >20% (water) / >35% (soil), qualify positive results as (J) and non-detect results as (UJ)
2. For low concentrations, if an element's duplicate absolute difference is > 3X the reporting level, qualify positive results as (J) and non-detect results as (UJ)
3. Use professional judgement to qualify data if the duplicate frequency criteria are not met.

Remarks: NA

IX. Inductively Coupled Plasma (ICP) Serial Dilution Analysis

Verify that a field blank or PE sample was not used for serial dilution.

Serial dilution of positive results are performed when values exceed 50X the IDL

Results from serial dilutions should agree within 10% of the original undiluted analysis

Deviations:

| Element | Sample # | Sample Result | Serial Dilution | %D | Action |
|---------|----------|---------------|-----------------|----|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the serial dilution %D is >10 and the analyte results are >50X the IDL, qualify all positive results as estimated (J) and non-detects as estimated (UJ).

Remarks: No discrepancies, ADR confirmed

X. Furnace Atomic Absorption QC**A. Duplicate Precision**

(Y/N)

1. Were duplicate injections performed for all samples? _____
2. Were one point analytical spikes performed for all samples? _____
3. Did duplicate injections agree within $\pm 20\%$? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If duplicate injection results are outside $\pm 20\%$, qualify positive results as (J) and non-detect results as (UJ)

Remarks:

NA

B. Post Digestion Spike Recoveries

(Y/N)

1. Did post digestion spike recoveries meet an 85-115% recovery criteria? _____
2. If spike recoveries did not meet recovery criteria were samples analyzed by MSA? _____
3. If MSA was used to analyze samples, was its' correlation coefficient ≥ 0.995 ? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If post digestion spike recoveries are $>115\%$, qualify positive results as (J) and non-detect results as (U)
2. If post digestion spike recoveries are 11-84%, qualify positive results as (J) and non-detect results as (UJ)
3. If post digestion spike recoveries are $<10\%$, qualify positive results as (R) and non-detect results as (R)
4. If MSA was used to quantitate values and the correlation coefficient was <0.995 , qualify data as (J or UJ)
5. If MSA was used to quantitate values and the correlation coefficient was <0.95 , qualify data as (R)

Remarks:

No discrepancies, ADR confirmed

XI. Inductively Coupled Plasma (ICP) Interference Check Sample Evaluation

Interference check samples should be analyzed at the beginning and end of each analysis run, or at a minimum of twice per 8 hour working shift.

Results for the ICS solution AB must fall within control limits of 20% for analytes included in the solution. Evaluate the ICS A solution raw data for results with an absolute value \geq MDL for analytes that are not present in the ICS A solution.

Deviations:

| Element | Sample # | Sample Result | Interferent Result | Action |
|---------|----------|---------------|--------------------|--------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If the ICS AB %R for an analyte is > 120%, qualify sample results \geq MDL as estimated (J) and non-detects should not be qualified.
2. If the ICS AB %R for an analyte is 50-79%, qualify sample results that are \geq MDL as estimated (J) and non-detects as estimated (UJ).
3. If the ICS AB %R for an analyte is <50%, qualify all sample results that are \geq MDL and all non-detects as unusable (R).
4. If results \geq MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences and with analyte concentration that approximate those levels in the ICS A, sample results \geq MDL should be qualified as estimated (J) and non-detects should not be qualified.
5. If negative results with absolute values > MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences, affected sample results > MDL should be qualified as estimated (J) and non-detects (UJ).

Remarks: ICS results met control limits

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J116407

Analysis: Sulfide, Nitrate, Nitrite, Sulfate, Alkalinity

Method: 9034, 9056, 2320

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: 

Date: 1/3/19

QA Reviewed by: 

Date: 01/07/2019

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH ≥ 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH ≤ 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |
|----------|---------|----------------|----------------|---------------|--------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
3. If samples were not properly preserved, use professional judgement to qualify the data

Remarks:

Holding times were met

IV. Initial & Continuing Calibration

A blank and at least three standards should be analyzed, with one of the standards being within 2X the MDL
Correlation coefficients must be ≥ 0.995
Initial calibration check recoveries must be within 90-110%
Continuing calibration check recoveries must be within 85-115%

Deviations:

| Compound | Correlation Coefficient | ICV/CCV | %R | Samples Affected |
|----------|-------------------------|---------|----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

- 1. If any compounds initial calibration linearity is <0.995, qualify the data as estimated (J/UJ)
- 2. If any compounds initial calibration linearity is <0.95, qualify the data as unusable (R)
- 3. If ICV or CCV criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
- 4. If ICV or CCV recoveries fall below 50%, qualify results as unusable (R)

Remarks:

Calibration results met control limits

V. Blanks (Method Blanks and Project Blanks)

An analytical method blank must be analyzed with each batch of samples
 Calculate action levels based on 5X the highest blank concentration of any given analyte
 Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria

Deviations:

| Analyte | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected | | |
|---------|-------------------------------|--------------------|------------------|----------|---------|
| Nitrate | 0.0433 mg/L | | ICB 5:43 | None | |
| Nitrate | 0.0435 mg/L | 0.435 mg/L | CCB 12:15 | 116407-8 | No qual |
| Nitrate | 0.0447 mg/L | 0.447 mg/L | CCB 18:44 | 116407-8 | ↓ |
| Sulfate | 0.254 mg/L | 2.54 mg/L | CCB 18:44 | 116407-8 | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If analyte results exceed the action levels, the data are not qualified
2. If analyte results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the analyte is detected above the reporting level, but below the action level, qualify as not-detected (U)

Remarks:

MB contamination qualified per ADR Output., no qual
CCB contamination was not included in ADR qualifiers, added to form 1's

VII. Matrix Spike Information

Each analyte's Matrix Spike % recovery should be within the laboratory established control limits
 In general matrix spike % recoveries should all be within 75-125%

Deviations:

| Analyte | %R | %R Limits | Samples Affected |
|---------|----|-----------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the spike recovery is outside limits, qualify all values in the unspiked sample as estimated (J/UJ)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. Use professional judgement to qualify additional samples in the analytical group based on MS results
4. Use professional judgement for qualification of data for unspiked analytes

Remarks:

No discrepancies, ADR confirmed

VIII. Laboratory Duplicate Information

Each analyte's RPD should be within the laboratory established control limits
In general RPDs should all be within 20%

Deviations:

| Analyte | RPD | RPD Limits | Samples Affected |
|---------|-----|------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

LEIDOS Laboratory Data Verification Checklist

Project: RVAAP Page 1 of 3

SDG No: J116469 **Analyte Group:** VOC, SVOC, PCB/Pest, Expl, Perchlorate, Metals, Wet Chem

Sample Matrix: Water

EDD (Y/N): _____

Disposition of Data Package: _____

NCR No. (if applicable): _____

1. Case Narrative

| | |
|---|---|
| Read SDG Case Narrative | Y |
| Check Laboratory sample ID vs. Project sample ID lists | Y |
| Check that discussion covers each analytical type included in the SDG | Y |
| Check for identified nonconforming items (e.g., missed holding times, etc.) | Y |

2. Chain-of-Custody (COC)

| | |
|---|---|
| Check COC sample collection, shipping, and receiving dates | Y |
| Check that COC signature blocks are complete | Y |
| Check COC project sample IDs vs. Lab IDs and Result Form IDs | Y |
| Match COC requested analyses with Case Narrative and with data package content (Result Forms) | Y |

3. Analytical Results Form

| | |
|---|---|
| Verify that a Result Form is present for each sample and analysis | Y |
| On each Result Form check: | |
| SDG No. | Y |
| Sample ID | Y |
| Lab ID | Y |
| Date Collected | Y |
| Date Extracted | Y |
| Date Analyzed | Y |
| Result Matrix | Y |
| Result Units | Y |

4. Project Verification

| | |
|--|---|
| Check project analyte list vs. analytes reported | Y |
| Check project requested methods vs. analytical methods performed | Y |
| Check analyte reporting levels vs. project reporting level goals | Y |

5. Analytical Quality Control Information

| | |
|---|----|
| Check for surrogate recovery results (e.g., org. form II) | Y |
| Check for LCS results (e.g., org. form III, inorg. form XII) | Y |
| Check for method blank results (e.g., org. form IV, inorg. form III) | Y |
| Check for MS/MSD results (e.g., inorg. form V) | Y |
| Check for laboratory duplicate results (e.g., inorg. form VI) | NA |
| Check for Method Calibration and Run Documentation | |
| organic: | |
| instrument performance check | Y |
| initial calibration data | Y |
| continuing calibration data | Y |
| internal standard areas | Y |
| internal standard retention times | Y |
| sample clean-up documentation (org. forms V through X) | Y |
| metal: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| method linear range | Y |
| sample run sequence (inorg. forms II, IV, and VIII through XIV) | Y |
| other: | |
| initial calibration data | Y |
| continuing calibration data | Y |
| method detection limits | Y |
| sample run sequence | Y |

6. Incorrect Information

Identify missing items or incorrect information (i.e., missing forms, unsigned forms, incorrect sample IDs, etc.)

Contact the laboratory or project personnel to obtain missing information or correct information

Document corrections below:

7. Nonconforming Items

Document all nonconforming items that can not be resolved above in a Non-Conformance Report (NCR), complete form, file, and follow-up

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116469

Analysis: VOC

Laboratory: Test America

Method: 8260B

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

| | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

"U", not detected at the associated level
"UJ", not detected and associated value estimated
"J", associated value estimated
"R", associated value unusable or analyte identity unfounded
"=", compound properly identified and value positive

Reviewed by: Brooke Francis

Date: 1/9/19

QA Reviewed by: Richard Staeh

Date: 01/10/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Lab ID # | Fraction | Compound | Conc. (ppb) |
|-------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| Date | Lab ID # | Fraction | Compound | Conc. (ppb) |
|------|----------|----------|----------|-------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Remarks: No contamination, ADR confirmed

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If gross contamination exists in blanks (i.e., saturated peaks by GC/ MS), all affected compounds in the associated samples should be qualified as unusable (R) due to interference.
5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB/ DFTPP) Acceptable (Y) or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: 10/15 11/3
 VOC - Date(s) of continuing calibration: 11/13
 Was the 12 hour criteria met? (Y) or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: All calibration results met control limits

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

- Linearity evaluation, are %RSD <20? Yes or No
- Is the RPD between calibration factors ≤25? Yes or No
- Are multicomponent calibration data provided for each analysis date? Yes or No
- Is the difference between columns check ≤ 25%D? Yes or No
- Are 4, 4'- DDT and endrin breakdown (PEM) ≤20% and combined breakdown ≤ 30% Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks: NA

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| VOC | SVOC | Pest | PCB |
|--------|--------|--------|--------|
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS 280-437466

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: No discrepancies, ADR confirmed

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
 VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
 VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
 SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC | | SVOC | | | Pest/PCB | | |
|----------|----------------|---------------|----------------|----------------|---------------|----------------|----------------|---------------|
| | Date Collected | Date Analyzed | Date Collected | Date Extracted | Date Analyzed | Date Collected | Date Extracted | Date Analyzed |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

All holding times were met

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
 VOC internal standard retention times within ± 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
 SVOC internal standard retention times within ± 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

~~No discrepancies, ADR confirmed~~ ISTD not evaluated by ADR; validated manually

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date:</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|--------------|-----------------|-----------------|-----------------|--------------------|
| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: PAH MB Contamination, ADR qualified

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

- 1. If compound results exceed the action levels, the data are not qualified
- 2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
- 3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
- 4. If gross contamination exists in blanks (i.e., saturated peaks by GC/ MS), all affected compounds in the associated samples should be qualified as unusable (R) due to interference.
- 5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks: _____

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP) Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: 11/12 11/14 11/7
 SVOC - Date(s) of continuing calibration: 11/15 11/8
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |
|----------|------|-----|------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: Calibration results met control limits

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

Linearity evaluation, are %RSD <20? Yes or No

Is the RPD between calibration factors ≤ 25 ? Yes or No

Are multicomponent calibration data provided for each analysis date? Yes or No

Is the difference between columns check $\leq 25\%D$? Yes or No

Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$ Yes or No

Deviations:

| Compound | %RSD | RPD | Samples Affected |
|----------|------|-----|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks: NA

IX. Matrix Spike/Matrix Spike Duplicate Information

General MS/MSD Criteria:
 percent recovery (%R)
 relative percent difference (RPD)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 70-130 | 45-135 | 40-140 | 40-140 |
| <30 | <50 | <50 | <50 |

Project Sample(s) Spiked: SCLmw-002-181001-GW

Deviations:

| Compound | %R | %R Limits | RPD | RPD Limits | Samples Affected |
|----------|----|-----------|-----|------------|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is above the upper control limit (UCL), qualify all positive values in the unspiked sample as estimated (J) and non-detects as estimated (UJ).
2. If the spike recovery is below the lower control limit (LCL), qualify positive values as estimated (J). And non-detects as estimated (UJ) in the unspiked sample.
3. If the spike recovery is <10%, qualify non-detect values as unusable (R)
4. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
5. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
6. Use professional judgement for qualification of data for unspiked compounds

Remarks: PAH Discrepancies, see ADR Output

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications: LCS 280-436342 LCS 280-436346

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one-half the lower limit, qualify valves as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive valves for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: No discrepancies, confirmed with ADR

LEIDOS
Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116469

Analysis: Pesticides/PCB

Laboratory: Test America

Method: 8081/8082

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: DoD QSM

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

Pest

The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur: SCLmw-002-181002-GW (280-116469-2), SCLmw-002-181001-GW (280-116469-3), SCLmw-002-181001-GW (280-116469-3[MS]), SCLmw-002-181001-GW (280-116469-3[MSD]), (LCS 280-436649/2-A), (LCSD 280-436649/3-A) and (MB 280-436649/1-A). The reagent lot number used was: T31E034.

PCB

The following samples required a sulfuric acid clean-up, via EPA Method 3665A, to reduce matrix interferences: SCLmw-002-181002-GW (280-116469-2), SCLmw-002-181001-GW (280-116469-3), (LCS 280-436649/4-A), (LCSD 280-436649/5-A) and (MB 280-436649/1-A).

The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur: SCLmw-002-181002-GW (280-116469-2), SCLmw-002-181001-GW (280-116469-3), (LCS 280-436649/4-A), (LCSD 280-436649/5-A) and (MB 280-436649/1-A).

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

III. Holding Times

VOC - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection
VOC - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection
VOC - Soils - preserve or analyze within 48 hours of sample collection; analyze within 14 days of preservation
SVOC, Pest., PCB - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction
SVOC, Pest., PCB - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

Table with 9 columns: Sample #, VOC (Date Collected, Date Analyzed), SVOC (Date Collected, Date Extracted, Date Analyzed), Pest/PCB (Date Collected, Date Extracted, Date Analyzed). The table contains 17 empty rows for data entry.

Actions:

- 1. If holding times are exceeded, all results are qualified as estimated (J/UJ)
2. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)

Remarks:

All holding times were met

Five horizontal lines provided for additional remarks or comments.

IV. System Monitoring Compounds (SMC) Recoveries (VOC, SVOC, Pesticides, PCBs)

List SMC compounds with unacceptable recoveries:

Note: SMC formerly known as surrogates.

Deviations:

| Sample # | VOC | | | SVOC | | | SVOC | | | Pest | PCB |
|----------|---------------|-----|-----|------|-----|-----|----------------|-----|-----|------|-----|
| | B/N Compounds | | | | | | Acid Compounds | | | | |
| | TOL | BFB | DCE | NBZ | FBP | TPH | PHL | 2FP | TBP | TCX | DCB |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |

| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks: No discrepancies, ADR confirmed

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
VOC internal standard retention times within ± 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
- 2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
- 3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
- 4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
- 5. If an IS retention time varies more than 30 seconds, review the chromatographic profile for shifts and irregularities. Use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

No discrepancies

VI. Blanks

All blanks were reported per matrix per concentration level for each 12 hour period on each GC/ MS system used to analyze VOCs and SVOCs Yes / No

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| <u>Date:</u> | <u>Lab ID #</u> | <u>Fraction</u> | <u>Compound</u> | <u>Conc. (ppb)</u> |
|--------------|-----------------|-----------------|-----------------|--------------------|

| _____ | _____ | _____ | _____ | _____ |
| _____ | _____ | _____ | _____ | _____ |

Remarks: No contamination, ADR confirmed

VI. Blanks (continued)

Calculate action levels based on 10X the highest blank concentration of "common laboratory solvents", VOCs (methylene chloride, acetone, toluene, 2-butanone, cyclohexane) or SVOCs (phthalates), and 5X the highest blank concentration for all other VOC, SVOC, Pesticides, and PCB compounds. Sample weights, volumes, and dilution factors must be taken into account when applying the 5X and 10X criteria. This allows the total amount of contaminant present to be considered.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If gross contamination exists in blanks (i.e., saturated peaks by GC/MS), all affected compounds in the associated samples should be qualified as unusable (R) due to interference.
5. If blanks were not analyzed per matrix per concentration level for each 12 hour period on each GC/MS system used to analyze VOCs and SVOCs use professional judgement to qualify data. Data may be rejected (R).

Remarks:

VII. Initial & Continuing Calibration (VOC, SVOC)

GC/MS instrument performance checks (BFB / DFTPP) Acceptable Y or N
 All compounds must have and RRF > 0.01, %RSD < 30, and %D < 25

VOC - Date of initial calibration: _____
 VOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

SVOC- Date of initial calibration: _____
 SVOC - Date(s) of continuing calibration: _____
 Was the 12 hour criteria met? Y or N

Deviations:

| Compound | Date | RRF | %RSD | %D | Samples Affected |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If any compound has an initial or continuing RRF of < 0.01, qualify positive results as estimated (J)
2. If any compound has an initial or continuing RRF of < 0.01, qualify non-detects as unusable (R)
3. If any compound has a %RSD >30 or a %D >25, qualify positive results as estimated (J)
4. If any compound has a %RSD >40 or a %D >40, qualify non-detects as estimated (UJ)
5. If BFB or DFTPP mass assignment / ION abundance criteria are all associated data as unusable (R).
6. If samples were analyzed outside the 12 hour BFB or DFTPP performance check time period, qualify the affected sample data as estimated (J/UJ).
7. If separate calibration for water and soil were not performed, use professional judgement to evaluate the data. Data may be rejected (R).
8. If calibrations were not completed within the 12 hour criterion, qualify all associated data as estimated (J/UJ). If the 12 hour criterion was grossly exceeded, reject all associated data (R).

Remarks: _____ NA _____

VIII. Initial & Continuing Calibration (Pesticides, PCBs)

- Linearity evaluation, are %RSD <20? Yes or No
- Is the RPD between calibration factors ≤ 25 ? Yes or No
- Are multicomponent calibration data provided for each analysis date? Yes or No
- Is the difference between columns check $\leq 25\%D$? Yes or No
- Are 4, 4'- DDT and endrin breakdown (PEM) $\leq 20\%$ and combined breakdown $\leq 30\%$? Yes or No

Deviations:

| Compound | %RSD | RPD %D | Samples Affected | |
|---------------------|------|-------------------|------------------|-----------------------|
| Toxaphene (average) | - | 32.56 | ICV all UJ | ND no qual |
| Toxaphene (average) | | 26.36 | ICV | ND no qual |
| Endrin Ketone | | 23.7 | CCV 438595/13 | ND no qual |
| Endosulfan Sulfate | | 24.3 | ↓ | ↓ |
| Methoxychlor | | 21.0 | ↓ | ↓ |
| Endosulfan Sulfate | | 21.8 | CCV 438595/26 | ND no qual |
| Toxaphene | | 23.8 | CCV 438595/41 | ND no qual |
| Endrin | | 22.4 | CCV 438595/43 | ND no qual |
| Endrin Aldehyde | | 24.2 | ↓ | ↓ |
| Methoxychlor | | 24.2 | ↓ | ↓ |
| Endosulfan Sulfate | | 29.5 | ↓ | ↓ |
| Endrin Ketone | | 28.3 | ↓ | ↓ |
| PCB 1248 (Average) | | 20.1 | ICV | ND no qual |
| PCB 1262 (Average) | | 21.6 | ICV | ND no qual |

Actions:

1. If %RSD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. If RPD criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
3. If %D criteria is not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
4. If breakdown criteria are not met, positive 4, 4'-DDT and endrin should be qualified as estimated (J).
And non-detects should be rejected (R).

Remarks:

X. Laboratory Control Sample Information

General LCS Criteria:
percent recovery (%R)

| | | | |
|--------|--------|--------|--------|
| VOC | SVOC | Pest | PCB |
| 80-120 | 60-120 | 50-130 | 50-130 |

Laboratory LCS Identifications:

LCS/D 280-436649 LCS/D 280-436649

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks:

The RPD for RDX is 50 and qualified J on the Form 1's and not by ADR SCLmw-002-181001-GW

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks:

No samples were reanalyzed or diluted

III. Holding Times

VOC types - Waters - unpreserved: aromatic within 7 days, non-aromatic within 14 days of sample collection

VOC types - Waters - preserved: aromatic and non-aromatic within 14 days of sample collection

VOC types - Soils - preserve/analyze within 48 hours of sample collection; analyze within 14 days of preservation

SVOC types - Waters - extract within 7 days of sample collection, analyze within 40 days of extraction

SVOC types - Soils - extract within 14 days of sample collection, analyze within 40 days of extraction

Deviations:

| Sample # | VOC types | | SVOC types | | | Notes: |

| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the spike recovery is outside limits, qualify all positive values in the unspiked sample as estimated (J)
2. If the spike recovery is <10%, qualify non-detect values as unusable (R)
3. If the RPD does not meet criteria, qualify positive values in the unspiked sample as estimated (J)
4. Use professional judgement to qualify additional samples in the analytical group based on MS/MSD results
5. Use professional judgement for qualification of data for unspiked compounds

Remarks: See ADR for discrepancies

VIII. Laboratory Control Sample Information

General LCS Criteria:

| | |
|-----------|------------|
| VOC types | SVOC types |
| 80-120 | 60-120 |

percent recovery (%R)

Laboratory LCS Identifications:

LCS 280-436459

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |

| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If the LCS recovery is outside limits but >10%, qualify all positive values as esimated (J)
2. If the LCS recovery is outside limits but >10%, qualify non-detect values as estimated (UJ)
3. If the LCS recovery is <10%, qualify all data for that analyte as unusable (R)
4. Use professional judgement for qualification of data for compounds with no LCS information

Remarks:

No discrepancies, ADR confirmed

**Leidos - Project Specific
Perchlorate by Mass Spectrometry Methods Data Verification/Validation**

Project: RVAAP

Page 1 of 10

SDG No: J116469

Analysis: Perchlorate

Method: 6860

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Isotope Ratios |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| Mas Tuning | |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

*** If this SDG requires full validation; recalculations from the raw data are required where noted in the verification/validation checklist. Attach all calculations at the end of the validation checklist.**

Data verification and data validation are essentially identical, with the exception that validation requires results to be recalculated from the raw data.

Remarks: DoD QSM

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded

Verification/Validation by: Brooke Francis

QA Reviewed by: Richard Stahl

Date: 1/9/19

Date: 01/10/2019

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No samples were reanalyzed or diluted

IV. $^{35}\text{CL}/^{37}\text{CL}$ Isotope Ratios

List any field samples, field QC samples, or laboratory QC samples where the $^{35}\text{CL}/^{37}\text{CL}$ Isotope ratio does not fall within 2.3 to 2.8:

Deviations:

| Sample # | Provide the ratio below: |
|----------|--------------------------|
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

| Sample # | Provide the ratio below: |
|----------|--------------------------|
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |
| | |

Actions:

1. If the $^{35}\text{CL}/^{37}\text{CL}$ isotope ratio does not meet acceptance criteria the sample must be reanalyzed.
2. If any sample is reported with an unacceptable $^{35}\text{CL}/^{37}\text{CL}$ isotope ratio, the results must be rejected (R)

Remarks: No discrepancies

The ion ratio is outside of control (2.30-3.80) due to instrument drift. The target analytes are in control in the associated QC sample indicating positive identification despite the ion ratio failure.

V. Internal Standards Performance

Internal standard areas must be between $\pm 50\%$ of the average areas from the initial calibrations (Y/N)
Relative retention times must be within 0.98-1.02 (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

- 1. If area counts are outside limits, qualify positive results associated with that IS as estimated (J)
- 2. Non-detected compounds quantitated using an IS area count >100% should not be qualified
- 3. Non-detected compounds quantitated using an IS area count <50%, qualify as estimated (UJ)
- 4. If extremely low area counts are reported (<50% of the lower limit), qualify non-detects as unusable (R)
- 5. If an IS retention time is outside acceptance criteria use professional judgement to qualify the data estimated (J/UJ) or unusable (R)

Remarks:

No IS discrepancies

VI. Blanks

A method blank was reported for each aqueous analytical batch and one method blank was reported for each soil extraction batch? (Y/N)

Review associated laboratory and project blank samples. List documented contamination below:

Laboratory Method Blanks:

| Date: | Sample ID # | Compound | Conc. |
|-------|-------------|----------|-------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Associated Project Blanks (e.g., equipment rinsates, trip blanks, etc.)

| Date | Sample ID # | Compound | Conc. |
|------|-------------|----------|-------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Remarks: No blank contamination

VI. Blanks (continued)

Calculate the action level based on 5X the highest blank concentration

Sample weights, volumes, and dilution factors must be taken into account when applying the 5X criteria.

Deviations:

| Compound | Maximum Conc. Detected, (ppb) | Action Level (ppb) | Samples Affected |
|----------|-------------------------------|--------------------|------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

1. If compound results exceed the action levels, the data are not qualified
2. If compound results are below the required reporting level, report results as non-detect (U) at the reporting level
3. If the compound is detected above the reporting level, but below the action level, qualify as not-detected (U)
4. If contamination exists in method blanks < 1/2 LOQ, samples must be re-extracted and reanalyzed.
Use professional judgement to qualify the data if this occurs.
5. If method blanks were not analyzed use professional judgement to qualify data. Data may be rejected (R).

Remarks: _____

VII. Initial & Continuing Calibration (VOC, SVOC)

Mass Calibration Acceptable? (Y/N)

Date of initial calibration: _____

r>0.995? (Y/N)

ICV ≤ 15% drift? (Y/N)

Date(s) of continuing calibration: _____

CCV analyzed at beginning of analytical sequence and after every 10 field sample? (Y/N)

CCV ≤ 15% drift? (Y/N)

LOQ Standard ≤ 30% drift? (Y/N)

LOQ Standard analyzed daily? (Y/N)

Deviations:

| Compound | Date | r value | %Drift | Samples Affected |
|----------|------|---------|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

*** If this SDG requires full validation; recalculate the r value, a CCV% Drift, and a LOQ % Drift from the raw data. Attach all calculations at the end of the validation checklist.**

1. If initial calibration curve criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. Only evaluate the ICV if it brackets field samples. If the ICV does bracket field samples, then CCV actions apply
3. If a CCV is above the upper control limit, qualify detects as estimated (J). Nondetects require no action.
4. If a CCV is below the lower control limit but > 30% recovery, qualify results as estimated (J/UJ).
5. If a CCV is ≤ 30% recovery, qualify detects as estimated (J) and nondetects as rejected (R)
6. If CCVs were not analyzed at the proper frequency, use professional judgement.
7. If an acceptable mass calibration was not performed, then all data should be rejected (R)
8. If a LOQ standard is above the upper control limit, qualify detects as estimated (J). Nondetects require no action.
9. If a LOQ standard is below the lower control limit but > 10% recovery, qualify results as estimated (J/UJ).
10. If a LOQ standard is ≤ 10% recovery, qualify detects as estimated (J) and nondetects as rejected (R)
11. If LOQ standards were not analyzed at the proper frequency, use professional judgement.

X. Laboratory Control Sample Information

General LCS Criteria:

Percent recovery (%R) = 80-120% recovery

RPD if LCSD performed = 20% RPD

Laboratory LCS Identifications: LCS 280-437280

Deviations:

| Compound | Date | %R | Samples Affected/Qualifiers Applied |
|----------|------|----|-------------------------------------|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

Actions:

*** If this SDG requires full validation; recalculate at least one % recovery and one % RPD (if LCSD was performed) from the raw data. Attach all calculations at the end of the validation checklist.**

Action should be based on both the number of compounds outside the criterion and the magnitude of the exceedance.

1. If the LCS recovery is below limits but > one-half the lower limit, qualify values as estimated (J/UJ).
2. If the LCS recovery is < one-half the lower limit, qualify all data for that analyte as unusable (R).
3. If the LCS recovery is greater than the upper limit, qualify positive values for that analyte as estimated (J).
4. If more than half the compounds in this LCS are not within recovery criteria, then qualify associated detected compounds as estimated (J).
5. Use professional judgement for qualification of data for compounds with no LCS information

Remarks: No discrepancies, ADR confirmed

LEIDOS
Metals Data Review Checklist

Project: RVAAP

Page 1 of 14

SDG No: J116469

Analysis: Metals

Laboratory: Test America

Method: 6010/6020/7470

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|---|
| Case Narrative | MS/MSD Recoveries and Differences |
| Analytical Holding Times | Duplicate Relative Percent Differences |
| Sample Preservation | ICP Serial Dilution |
| Method Calibration | Furnace Atomic Absorption QC |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| LCS Recoveries | Internal Standard Performance (if applicable) |

Project specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall remarks: DoD QSM

Some results were qualified as estimated due to MS/MSD and/or calibration discrepancies

Some results were qualified as non-detect due to blank contamination

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

Actions:

- 1. If preserved samples exceed holding time, qualify all associated results as estimated (J/UJ).
- 2. If unpreserved samples exceed holding time, qualify all associated results as unusable (R).
- 3. If holding times are exceeded by more than 2X, reviewer may qualify non-detected results as unusable (R)
- 4. If water samples are not acidified, use professional judgement. Minimally, qualify data as estimated (J) and non-detects unusable (R).
- 5. If soil samples exceed holding time, use professional judgement to qualify data.

Remarks:

Holding times were met

IV. Initial & Continging Calibration (ICP, GFAA, CVAA, etc.)

Initial calibration linearity criteria is $r \geq 0.995$

ICV and CCV criteria are $\pm 10\%$ recovery, low level check standard allowed $\pm 30\%$

ICP inter-element check standard criteria $\pm 20\%$

Deviations:

| Element | Date | Intial Calib. | ICV/CCV | %R | Samples Affected | |
|-----------|-------|---------------|---------|-----|------------------|----------|
| Sodium | 11/7 | | CCVL | 232 | 436619/65 | None |
| Sodium | 11/7 | | CCVL | 122 | 436619/93 | 116469-2 |
| Sodium | 11/7 | | CCVL | 123 | 436619/103 | 116469-3 |
| Aluminum | 11/7 | | CCVL | 122 | | ↓ |
| Magnesium | 11/7 | | ICVL | 126 | 436768/11 | None |
| Barium | 11/13 | | ICVL | 121 | | ↓ |
| Barium | 11/13 | | CCVL | 125 | 437566/68 | None |
| Manganese | 11/14 | | CCVL | 124 | 437566/79 | None |

Nickel 11/14 CCVL 70 437566/92 116469-2, 3
 Beryllium 11/14 CCVL 127 437566/105 116469-2, 3 ND, no qual
Actions: Vanadium 123 ↓ ND, no qual

1. If any elements initial claibration linearity is <0.995 , qualify the data as estimated (J/UJ)
2. If any elements initial claibration linearity is <0.95 , qualify the data as unusable (R)
- 3a. If any elements ICV or CCV recovery is $<90\%$, qualify the data as estimated (J/UJ)
- 3b. If any elements ICV or CCV recovery is $> 110\%$, qualify results \geq MDL as estimated (J).
 Do not qualify non-detects.
- 4a. If any elements ICV or CCV recovery is $<75\%$, qualify the data as unusable (R)
- 4b. If any elements ICV or CCV recovery is $> 125\%$ qualify positive results as estimated (J) or non-detects as unusable (R).
- 4c. If any element ICV or CCV recovery is $\geq 160\%$, qualify positive results \geq MDL as unusable (R).
 Do not qualify non-detects.
- 5a. If any elements CRI recovery is 50 - 69% (30 - 49% for Sb, Pb, Tb), qualify results \geq MDL (but < 2 times CRQL) as estimated (J/UJ) and results > 2 times CRQL are not qualified.
- 5b. If any elements CRI recovery is $< 50\%$ ($<30\%$ for Sb, Pb, Tl), qualify results \geq MDL (but < 2 times CRQL) and non-detects as unusable (R). Results > 2 times CRQL are estimated (J).
- 5c. If any elements CRI recovery is $> 130\%$ but $< 180\%$ ($>150\%$ but $\leq 200\%$ for Sb, Pb, Tl), qualify results \geq MDL (but < 2 times CRQL) as esimated (J). And non-detects and results $\geq 2x$ CRQL are not qualified.
- 5d. If CRI or (R) $> 180\%$ ($> 200\%$ for Sb, Pb, Ti), qualify results that are \geq MDL as unusable (R).

Remarks: _____

V. Blanks (ICB, CCB, Method Blank, Equipment Rinsate Blank)**A. Blank Results**

If the blank level is > CRQL for any analyte, check that the analyte's concentration in the samples is > 10 times the blank value. The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account when applying the action level.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times \text{V/W} \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|----------------|-----------|---------------------|------------------|------------------|
| CCB 436619/64 | Sodium | 197 ug/L | 1850 | None |
| CCB 436619/78 | Sodium | 185 ug/L | 1850 | 116469-2 |
| | Aluminum | 22.4 ug/L | 224 | ↓ |
| CCB436619/92 | Sodium | 168 ug/L | 1680 | 116469-2, 3 |
| CCB 436619/102 | Sodium | 199 ug/L | 1990 | 116469-3 |
| CCB 436768/66 | Magnesium | 16.8 ug/L | 168 | 116469-3 |
| ICB 437566/8 | Vanadium | 1.20 | 1.20 | None |
| CCB 437566/25 | Antimony | 0.485 | 0.485 | None |
| | Vanadium | 0.558 | 0.558 | ↓ |
| CCB 437566/67 | Vanadium | 1.42 | 1.42 | None |
| CCB 437566/78 | Antimony | 0.506 | 0.506 | None |
| | Vanadium | 1.52 | 1.52 | ↓ |

If additional space is required, use next page

Actions:

1. For blank results \geq MDL but \leq CRQL, qualify samples \geq MDL but $<$ CRQL as CRQL U.

Use professional judgement to qualify sample results exceeding the CRQL.

2a. If blank results are $>$ CRQL: For sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ 10 times the blank qualify results as unusable (R) or estimated (J). No action is taken for sample results \geq 10 times the blank levels.

2b. If ICB/ CCB results are $>$ CRQL; for sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ blank results, qualify results as not detected (U) at the level of the blank or unusable (R). Use professional judgement for sample results $>$ blank results.

Remarks:

CCB contamination is not qualified by ADR, see Form 1's

VII. Matrix Spike Evaluation

All MS recovery criteria are set at 75-125%

An MS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Verify that a field blank or PE sample was not used for spiked sample analysis

Verify that a post-digestion spike was analyzed for those analytes where the pre-digestion spike recovery is outside control limits and the sample result is < 4 times the spike added.

Project Sample(s) Spiked: SCLmw-002-181001-GW

Deviations:

| Element | Spiked Sample Result | Sample Result | Spike Amount | %R | Samples Affected |
|---------|----------------------|---------------|--------------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the sample concentration exceeds the spiking level by a factor of 4X or more, do not qualify the data
2. If the spike recovery is >125%, qualify all positive values as (J).
3. If the spike recovery is between 30-74%, qualify positive values as (J) and non-detect values as estimated (UJ)
4. If the spike recovery is <30%, qualify positive values as (J) and non-detects are qualified unusable (R) if the post-digestion spike recovery is < 75% (or none was performed); non-detects are qualified as estimated (UJ) If the post-digestion spike recovery is ≥ 75%. There is no post-digestion spike performed for mercury.
5. Qualify all samples of similar matrix to the spiked sample in the same manner
6. Use professional judgement to qualify data if the MS frequency criteria are not met.
7. Use professional judgement for qualification of data for unspiked elements

Remarks: See ADR for discrepancies

VIII. Laboratory Duplicate Evaluation

Duplicate relative percent difference (RPD) for water is 20% (both results > 5 times CDRL) or < CRDL difference (if either result is < 5 times CRDL) and RPD for soil is 35% (if both results are > 5 times CRDL or < 2 times CRDL if either result is < 5 times CRDL).

When duplicate sample values are both less than the reporting level they are considered acceptable

When duplicate sample values are within 5X the reporting level they are acceptable if their absolute difference is within 3X the reporting level

Verify that a field blank on PE sample was not used for duplicate analysis.

Deviations: _____

| Element | Sample # | Duplicate # | RPD | Samples Affected |
|---------|----------|-------------|-----|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If an element's RPD is >20% (water) / >35% (soil), qualify positive results as (J) and non-detect results as (UJ)
2. For low concentrations, if an element's duplicate absolute difference is > 3X the reporting level, qualify positive results as (J) and non-detect results as (UJ)
3. Use professional judgement to qualify data if the duplicate frequency criteria are not met.

Remarks: NA

X. Furnace Atomic Absorption QC**A. Duplicate Precision**

(Y/N)

1. Were duplicate injections performed for all samples? _____
2. Were one point analytical spikes performed for all samples? _____
3. Did duplicate injections agree within $\pm 20\%$? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If duplicate injection results are outside $\pm 20\%$, qualify positive results as (J) and non-detect results as (UJ)

Remarks:

NA

B. Post Digestion Spike Recoveries

(Y/N)

1. Did post digestion spike recoveries meet an 85-115% recovery criteria? _____
2. If spike recoveries did not meet recovery criteria were samples analyzed by MSA? _____
3. If MSA was used to analyze samples, was its' correlation coefficient ≥ 0.995 ? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If post digestion spike recoveries are $>115\%$, qualify positive results as (J) and non-detect results as (U)
2. If post digestion spike recoveries are 11-84%, qualify positive results as (J) and non-detect results as (UJ)
3. If post digestion spike recoveries are $<10\%$, qualify positive results as (R) and non-detect results as (R)
4. If MSA was used to quantitate values and the correlation coefficient was <0.995 , qualify data as (J or UJ)
5. If MSA was used to quantitate values and the correlation coefficient was <0.95 , qualify data as (R)

Remarks:

NA

XI. Inductively Coupled Plasma (ICP) Interference Check Sample Evaluation

Interference check samples should be analyzed at the beginning and end of each analysis run, or at a minimum of twice per 8 hour working shift.

Results for the ICS solution AB must fall within control limits of 20% for analytes included in the solution. Evaluate the ICS A solution raw data for results with an absolute value \geq MDL for analytes that are not present in the ICS A solution.

Deviations:

| Element | Sample # | Sample Result | Interferent Result | Action |
|---------|----------|---------------|--------------------|--------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

1. If the ICS AB %R for an analyte is > 120%, qualify sample results \geq MDL as estimated (J) and non-detects should not be qualified.
2. If the ICS AB %R for an analyte is 50-79%, qualify sample results that are \geq MDL as estimated (J) and non-detects as estimated (UJ).
3. If the ICS AB %R for an analyte is <50%, qualify all sample results that are \geq MDL and all non-detects as unusable (R).
4. If results \geq MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences and with analyte concentration that approximate those levels in the ICS A, sample results \geq MDL should be qualified as estimated (J) and non-detects should not be qualified.
5. If negative results with absolute values > MDL are found for analytes not present in the ICS A solution, then in samples with comparable or higher levels of interferences, affected sample results > MDL should be qualified as estimated (J) and non-detects (UJ).

Remarks:

All ICP results met control limits

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

Project: RVAAP

Page 1 of 8

SDG No: J116469

Analysis: Cyanide, Sulfide, Nitrate/Nitrite, Sulfate, Alkalinity, Nitrocell

Method: 9012, 9034, 9056, 2320, 353.3

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: DoD QSM

Some results were qualified as non-detect due to blank contamination

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

Reviewed by: Brooke Francis

I. Case Narrative

Verify direct statements made within the Laboratory Case Narrative (note discrepancies).

Remarks: No additional discrepancies were noted

II. Re-analysis and Secondary Dilutions

Verify that re-analysis and secondary dilutions were performed and reported as necessary. Determine appropriate results to report.

Remarks: No results were reanalyzed or diluted

III. Holding Times

Sample should be preserved and analyzed according to the appropriate analytical method
 In general the following preservations and holding times for waters can be applied:

- Sulfate, 4 degrees C, 28 days
- Sulfide, 4 degrees C, pH ≥ 9 with zinc acetate/sodium hydroxide, 7 days
- Bromide/Chloride/Fluoride, no preservative required, 28 days
- Nitrate/Nitrite or Ammonia, 4 degrees C, pH ≤ 2 with sulfuric acid, 28 days
- Nitrate or Nitrite, 4 degrees C, 48 hours
- Alkalinity, 4 degrees C, 14 days
- TDS/TSS, 4degrees C, 7 days
- Phosphate (total), 4 degrees C, pH < 2 with sulfuric acid, 28 days
- Hexavalent Chromium, Cool 4 degress C, water- 24 hours, soil - 30 days

Deviations:

| Sample # | Analyte | Date Collected | Date Extracted | Date Analyzed | Notes: |

LEIDOS Laboratory Data Verification Checklist

| | | |
|-------------------------------------|---------|---|
| Project: | RVAAP | Page 1 of 3 |
| SDG No: | J116538 | Analyte Group: VOC, SVOC, PAH, Explosives, pest, PCB, Wet Chem, Metal |
| | | Sample Matrix: Water |
| | | EDD (Y/N): |
| Disposition of Data Package: | | |
| NCR No. (if applicable): | | |

1. Case Narrative

| | |
|---|---|
| Read SDG Case Narrative | Y |
| Check Laboratory sample ID vs. Project sample ID lists | Y |
| Check that discussion covers each analytical type included in the SDG | Y |
| Check for identified nonconforming items (e.g., missed holding times, etc.) | Y |

2. Chain-of-Custody (COC)

| | |
|---|---|
| Check COC sample collection, shipping, and receiving dates | Y |
| Check that COC signature blocks are complete | Y |
| Check COC project sample IDs vs. Lab IDs and Result Form IDs | Y |
| Match COC requested analyses with Case Narrative and with data package content (Result Forms) | Y |

3. Analytical Results Form

| | |
|---|---|
| Verify that a Result Form is present for each sample and analysis | Y |
| On each Result Form check: | |
| SDG No. | Y |

LEIDOS Organic Data Review Checklist

Project: RVAAP

Page 1 of 11

SDG No: J116538-1

Analysis: VOC

Method: 8260B

Laboratory: Test America

Matrix: Water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|------------------------------------|
| Case Narrative | Analytical Surrogate Recoveries |
| Analytical Holding Times | Internal Standard Performance |
| Sample Preservation | MS/MSD Recoveries and Differences |
| Method Calibration | LCS Recoveries |
| Method and Project Blanks | Re-analysis and Secondary Dilution |

Project Specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall Remarks: QSM & QAPP Guidance

No sample results were qualified

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

| QC | | | | | | | | | | | |
| Limits | | | | | | | | | | | |

Actions:

1. If any SMC recovery is <10%, qualify all positive results in associated fractions as estimated (J)
2. If any SMC recovery is <10%, qualify all nondetects in associated fractions as unusable (R)
3. If SMC recoveries fall between 10% and the lower recovery limit, qualify results as estimated (J/UJ)
4. If SMC recoveries fall above the upper recovery limit, qualify positive results as estimated (J)
5. Use professional judgement to qualify Pest/PCB results when SMC recoveries are >10%
6. Use professional judgement to qualify results when SMC recoveries have been diluted out of spec.
7. For SVOC, qualification of the data is required only when 2 or more SMC per fraction are not within control limits

Remarks:

No qual

V. Internal Standards Performance (VOC, SVOC)

VOC internal standard area counts within -50% to +100% of standard (Y/N)
VOC internal standard retention times within ± 30 seconds of standard (Y/N)

SVOC internal standard area counts within -50% to +100% of standard (Y/N)
SVOC internal standard retention times within + 30 seconds of standard (Y/N)

Deviations:

| Sample # | IS Affected | Area Counts | Acceptable Range | RT | Std. RT Value |
|----------|-------------|-------------|------------------|----|---------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

VII. Initial & Continuing Calibration (VOC, SVOC)

Mass Calibration Acceptable? (Y/N)

Date of initial calibration: _____

r>0.995? (Y/N)

ICV ≤ 15% drift? (Y/N)

Date(s) of continuing calibration: _____

CCV analyzed at beginning of analytical sequence and after every 10 field sample? (Y/N)

CCV ≤ 15% drift? (Y/N)

LOQ Standard ≤ 30% drift? (Y/N)

LOQ Standard analyzed daily? (Y/N)

Deviations:

| Compound | Date | r value | %Drift | Samples Affected |
|----------|------|---------|--------|------------------|
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |

Actions:

*** If this SDG requires full validation; recalculate the r value, a CCV% Drift, and a LOQ % Drift from the raw data. Attach all calculations at the end of the validation checklist.**

1. If initial calibration curve criteria are not met, qualify positive results as estimated (J) and non-detects as estimated (UJ)
2. Only evaluate the ICV if it brackets field samples. If the ICV does bracket field samples, then CCV actions apply
3. If a CCV is above the upper control limit, qualify detects as estimated (J). Nondetects require no action.
4. If a CCV is below the lower control limit but > 30% recovery, qualify results as estimated (J/UJ).
5. If a CCV is ≤ 30% recovery, qualify detects as estimated (J) and nondetects as rejected (R)
6. If CCVs were not analyzed at the proper frequency, use professional judgement.
7. If an acceptable mass calibration was not performed, then all data should be rejected (R)
8. If a LOQ standard is above the upper control limit, qualify detects as estimated (J). Nondetects require no action.
9. If a LOQ standard is below the lower control limit but > 10% recovery, qualify results as estimated (J/UJ).
10. If a LOQ standard is ≤ 10% recovery, qualify detects as estimated (J) and nondetects as rejected (R)
11. If LOQ standards were not analyzed at the proper frequency, use professional judgement.

Calibration results met control limits

LEIDOS Metals Data Review Checklist

Project: RVAAP

Page 1 of 14

SDG No: J116538

Analysis: Metals/Mercury

Method: 6010, 6020, 7470

Laboratory: Test America

Matrix: water

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|---------------------------|---|
| Case Narrative | MS/MSD Recoveries and Differences |
| Analytical Holding Times | Duplicate Relative Percent Differences |
| Sample Preservation | ICP Serial Dilution |
| Method Calibration | Furnace Atomic Absorption QC |
| Method and Project Blanks | Re-analysis and Secondary Dilution |
| LCS Recoveries | Internal Standard Performance (if applicable) |

Project specific QA/QC or contract requirements may take priority over validation criteria in this procedure.

Overall remarks: DoD QSM and QAPP Guidance

Some results were qualified as non-detect due to blank contamination

Some results were qualified as estimated due to calibration discrepancies

Definition of Qualifiers:

- "U", not detected at the associated level
- "UJ", not detected and associated value estimated
- "J", associated value estimated
- "R", associated value unusable or analyte identity unfounded
- "=", compound properly identified and value positive

116538-1, 2

Actions:

1. If any elements initial claibration linearity is < 0.995 , qualify the data as estimated (J/UJ)
2. If any elements initial claibration linearity is < 0.95 , qualify the data as unusable (R)
- 3a. If any elements ICV or CCV recovery is $< 90\%$, qualify the data as estimated (J/UJ)
- 3b. If any elements ICV or CCV recovery is $> 110\%$, qualify results \geq MDL as estimated (J).

Do not qualify non-detects.

- 4a. If any elements ICV or CCV recovery is $< 75\%$, qualify the data as unusable (R)
- 4b. If any elements ICV or CCV recovery is $> 125\%$ qualify positive results as estimated (J) or non-detects as unusable (R).
- 4c. If any element ICV or CCV recovery is $\geq 160\%$, qualify positive results \geq MDL as unusable (R).

Do not qualify non-detects.

- 5a. If any elements CRI recovery is 50 - 69% (30 - 49% for Sb, Pb, Tb), qualify results \geq MDL (but < 2 times CRQL) as estimated (J/UJ) and results > 2 times CRQL are not qualified.
- 5b. If any elements CRI recovery is $< 50\%$ ($< 30\%$ for Sb, Pb, TI), qualify results \geq MDL (but < 2 times CRQL) and non-detects as unusable (R). Results > 2 times CRQL are estimated (J).
- 5c. If any elements CRI recovery is $> 130\%$ but $< 180\%$ ($> 150\%$ but $\leq 200\%$ for Sb, Pb, TI), qualify results \geq MDL (but < 2 times CRQL) as esimated (J). And non-detects and results $\geq 2x$ CRQL are not qualified.
- 5d. If CRI or (R) $> 180\%$ ($> 200\%$ for Sb, Pb, Ti), qualify results that are \geq MDL as unusable (R).

Remarks:

V. Blanks (ICB, CCB, Method Blank, Equipment Rinsate Blank)**A. Blank Results**

If the blank level is > CRQL for any analyte, check that the analyte's concentration in the samples is > 10 times the blank value. The highest blank concentration of observed elements is the action level.

Sample weights, volumes, and dilution factors must be taken into account when applying the action level.

Blank results given in ug/L must be converted to mg/kg to compare them with soil sample results.

use the following equation:

$$\text{ug/L} \times \text{V/W} \times 1\text{L}/1000\text{mL} \times 1000\text{g}/1\text{kg} \times 1\text{mg}/1000\text{ug} = \text{mg/kg}$$

where: V = volume of samples digest solution (usually 200 mL)

W = weight of sample digested (usually 1 g)

Deviations:

| Blank ID | Element | Max. Conc. Detected | Action Level | Samples Affected |
|-----------------|----------|---------------------|--------------|-----------------------------|
| CCB 11/7 4:41 | Sodium | 197 | — | None Bracket |
| CCB 11/7 5:16 | Sodium | 185 | 1850 ug/L | 116538-1, 2 All >AL |

| | Vanadium | 1.23 | 12.3 ug/L | ↓ All ND, no qual |

If additional space is required, use next page

Actions:

1. For blank results \geq MDL but \leq CRQL, qualify samples \geq MDL but $<$ CRQL as CRQL U.

Use professional judgement to qualify sample results exceeding the CRQL.

2a. If blank results are $>$ CRQL: For sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ 10 times the blank qualify results as unusable (R) or estimated (J). No action is taken for sample results \geq 10 times the blank levels.

2b. If ICB/ CCB results are $>$ CRQL; for sample values \geq MDL but \leq CRQL, qualify results as CRQL U; for sample values $>$ CRQL but $<$ blank results, qualify results as not detected (U) at the level of the blank or unusable (R). Use professional judgement for sample results $>$ blank results.

Remarks:

VII. Matrix Spike Evaluation

All MS recovery criteria are set at 75-125%

An MS must be analyzed for each matrix and for each digestion batch or set of twenty samples

Verify that a field blank or PE sample was not used for spiked sample analysis

Verify that a post-digestion spike was analyzed for those analytes where the pre-digestion spike recovery is outside control limits and the sample result is < 4 times the spike added.

Project Sample(s) Spiked: _____

Deviations:

| Element | Spiked Sample Result | Sample Result | Spike Amount | %R | Samples Affected |
|---------|----------------------|---------------|--------------|----|------------------|
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |

Actions:

1. If the sample concentration exceeds the spiking level by a factor of 4X or more, do not qualify the data
2. If the spike recovery is >125%, qualify all positive values as (J).
3. If the spike recovery is between 30-74%, qualify positive values as (J) and non-detect values as estimated (UJ)
4. If the spike recovery is <30%, qualify positive values as (J) and non-detects are qualified unusable (R) if the post-digestion spike recovery is < 75% (or none was performed); non-detects are qualified as estimated (UJ) If the post-digestion spike recovery is ≥ 75%. There is no post-digestion spike performed for mercury.
5. Qualify all samples of similar matrix to the spiked sample in the same manner
6. Use professional judgement to qualify data if the MS frequency criteria are not met.
7. Use professional judgement for qualification of data for unspiked elements

Remarks: NA

X. Furnace Atomic Absorption QC**A. Duplicate Precision**

(Y/N)

1. Were duplicate injections performed for all samples? _____
2. Were one point analytical spikes performed for all samples? _____
3. Did duplicate injections agree within $\pm 20\%$? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If duplicate injection results are outside $\pm 20\%$, qualify positive results as (J) and non-detect results as (UJ)

Remarks:

NA

B. Post Digestion Spike Recoveries

(Y/N)

1. Did post digestion spike recoveries meet an 85-115% recovery criteria? _____
2. If spike recoveries did not meet recovery criteria were samples analyzed by MSA? _____
3. If MSA was used to analyze samples, was its' correlation coefficient ≥ 0.995 ? _____

Deviations:

| Element | Deviation | Sample Affected |
|---------|-----------|-----------------|
| | | |
| | | |
| | | |
| | | |
| | | |

Actions:

1. If post digestion spike recoveries are $>115\%$, qualify positive results as (J) and non-detect results as (U)
2. If post digestion spike recoveries are 11-84%, qualify positive results as (J) and non-detect results as (UJ)
3. If post digestion spike recoveries are $<10\%$, qualify positive results as (R) and non-detect results as (R)
4. If MSA was used to quantitate values and the correlation coefficient was <0.995 , qualify data as (J or UJ)
5. If MSA was used to quantitate values and the correlation coefficient was <0.95 , qualify data as (R)

Remarks:

NA

LEIDOS
Inorganic Data Review Checklist
(Chloride, Fluoride, Nitrate/Nitrite, Sulfate, Sulfide, Phosphate, etc.)

| | | |
|--------------------|---------------------|--|
| Project: | <u>RVAAP</u> | Page 1 of 8 |
| SDG No: | <u>J116538</u> | Analysis: <u>Cyanide, Sulfide, Nitrate/Nitrite, Sulfate, Alkalinity</u> |
| | | Method: <u>9012, 9034, 9056, 2320</u> |
| Laboratory: | <u>Test America</u> | Matrix: <u>Water</u> |

The above data package has been reviewed and the analytical quality control/quality assurance performance data have been summarized. The general criteria used to assess the analytical integrity of the data were based on an examination of the following:

- | | |
|--------------------------|------------------------------------|
| Case Narrative | Method and Project Blanks |
| Analytical Holding Times | Matrix Spike Recoveries |
| Sample Preservation | Duplicate Differences |
| Method Calibration | LCS Recoveries |
| | Re-analysis and Secondary Dilution |

Overall Remarks: DoD QSM and QAPP Guidance

No sample results were qualified

Definition of Qualifiers:

Note: Manual data validation qualifiers are applied to specific data points as a result of outlier QC results as indicated on the Form I, followed by a reason code that identifies the nature of the QC outlier. Except where qualified separately by ADR.net, in the absence of an annotated data validation qualifier, it is understood that the laboratory qualifier is the final data validation qualifier.

Data Qualifier Summary

Lab Reporting Batch ID: 280-116538-1

Laboratory: TA DEN

EDD Filename: 280-116538-1

eQAPP Name: Leidos-RVAAP NACA_20181218 - Combined

Reason Code Legend

| <i>Reason Code</i> | <i>Description</i> |
|--------------------|--|
| Lcs | Laboratory Control Spike Upper Estimation |
| Mb | Method Blank Contamination |
| Ms | Matrix Spike Precision |
| RI | Reporting Limit Trace Value |
| Surr | Surrogate/Tracer Recovery Lower Estimation |

* denotes a non-reportable result
